Lecture 2: More Logic, Equivalence & Digital Circuits

Last class: Some Connectives & Truth Tables

Negation (not)

p	$\neg p$
Т	F
F	Т

Disjunction (or)

p	q	$p \vee q$
Т	Т	Т
Т	F	Т
F	Т	Т
F	F	F

Conjunction (and)

p	q	$p \wedge q$
Т	T	Т
Т	F	F
F	Т	F
F	F	F

Exclusive Or

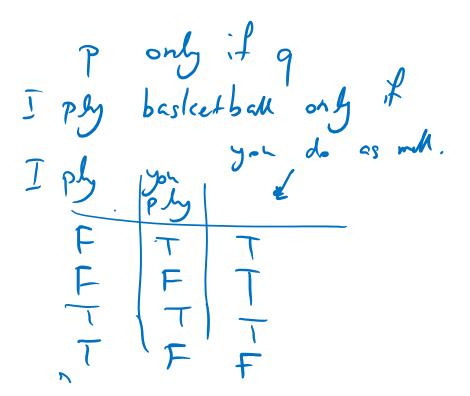

p	q	$p \oplus q$
Т	Т	F
Т	F	Т
F	Т	Т
F	F	F

Last Class: $p \rightarrow q$

Implication:

р	q	$p \rightarrow q$
T	Т	Т
Т	F	F
F	Т	Т
F	F	Т

- -p implies q
- whenever p is true q must be true
- if p then q
- -q if p
- -p is sufficient for q
- -p only if q
- q is necessary for p

Biconditional: $p \leftrightarrow q$

- p iff q
- p is equivalent to q
- p implies q and q implies p
- p is necessary and sufficient for q

p	q	$p \leftrightarrow q$
1	 	
1	Ħ	F
Ц	 	F
F	F	1

Biconditional: $p \leftrightarrow q$

- p iff q
- p is equivalent to q
- p implies q and q implies p
- p is necessary and sufficient for q

p	q	$p \leftrightarrow q$

Т	F	F
F	T	F
F	F	T

Last class: Using Logical Connectives

Measles:

"You can get measles"

Mumps:

"You can get mumps"

MMR:

"You had the MMR vaccine"

"You can get measles and mumps if you didn't have the MMR vaccine, but if you had the MMR vaccine then you can't get either."

((Measles and Mumps) if not MMR) and (if MMR then not (Measles or Mumps))

((Measles Mumps) if ¬MMR) \(\lambda\) (if MMR then ¬(Measles \(\sigma\) Mumps)) \(\sigma\) (\(\sigma\) \(\sigma\) \(\sigm

Understanding the Vaccine Sentence

"You can get measles and mumps if you didn't have the MMR vaccine, but if you had the MMR vaccine you can't get either."

```
((Measles \land Mumps) if \negMMR) \land (if MMR then \neg(Measles \lor Mumps)) \downarrow (\negMMR \rightarrow (Measles \land Mumps)) \land (MMR \rightarrow \neg(Measles \lor Mumps))
```

Understanding the Vaccine Sentence

"You can get measles and mumps if you didn't have the MMR vaccine, but if you had the MMR vaccine you can't get either."

```
((Measles \land Mumps) if \negMMR) \land (if MMR then \neg(Measles \lor Mumps))

(\negMMR \rightarrow (Measles \land Mumps)) \land (MMR \rightarrow \neg(Measles \lor Mumps))

Define shorthand ...

p: MMR

q: Measles

r: Mumps

(\negP \rightarrow (\negP) \rightarrowP) \rightarrow (\negP) \rightarrowP) \rightarrow
```

Analyzing the Vaccine Sentence with a Truth Table

p	q	r	eg p	$q \wedge r$	$ eg p o (q \wedge r)$	$q \lor r$	$\neg (q \lor r)$	$p \rightarrow \neg (q \lor r)$	$(\neg p \longrightarrow (q \land r)) \land (p \rightarrow \neg (q \lor r))$

Т	F	F	T	F	Т	Т	F
F	Т	Т	F	Т	F	F	Т
F	F	Т	Т	Т	Т	Т	Т

Tautologies!

Terminology: A compound proposition is a...

- Tautology if it is always true
- Contradiction if it is always false
- Contingency if it can be either true or false

$$(p \rightarrow q) \land p$$

$$(on ti)$$

$$p = F \longrightarrow F$$

$$p = T q = T T$$

Tautologies!

Terminology: A compound proposition is a...

- Tautology if it is always true
- Contradiction if it is always false
- Contingency if it can be either true or false

$$p \vee \neg p$$

This is a tautology. It's called the "law of the excluded middle. If p is true, then $p \lor \neg p$ is true. If p is false, then $p \lor \neg p$ is true.

$$p \oplus p$$

This is a contradiction. It's always false no matter what truth value p takes on.

$$(p \rightarrow q) \land p$$

This is a contingency. When p=T, q=T, $(T \rightarrow T) \land T$ is true. When p=T, q=F, $(T \rightarrow F) \land T$ is false.

Logical Equivalence

A = **B** means **A** and **B** are identical "strings":

$$- p \wedge q = p \wedge q$$

$$- p \wedge q \neq q \wedge p$$

Logical Equivalence

A = B means A and B are identical "strings":

 $- p \wedge q = p \wedge q$

These are equal, because they are character-for-character identical.

 $-p \land q \neq q \land p$

These are NOT equal, because they are different sequences of characters. They "mean" the same thing though.

$A \equiv B$ means A and B have identical truth values:

$$- p \wedge q \equiv p \wedge q$$

$$- p \wedge q \equiv q \wedge p$$

$$- p \wedge q \not\equiv q \vee p$$

Logical Equivalence

A = B means A and B are identical "strings":

 $- p \wedge q = p \wedge q$

These are equal, because they are character-for-character identical.

 $- p \wedge q \neq q \wedge p$

These are NOT equal, because they are different sequences of characters. They "mean" the same thing though.

$A \equiv B$ means A and B have identical truth values:

 $- p \wedge q \equiv p \wedge q$

Two formulas that are equal also are equivalent.

 $- p \wedge q \equiv q \wedge p$

These two formulas have the same truth table!

 $- p \wedge q \neq q \vee p$

When p=T and q=F, $p \land q$ is false, but $p \lor q$ is true!

$A \leftrightarrow B$ vs. $A \equiv B$

 $A \equiv B$ is an assertion over all possible truth values that A and B always have the same truth values.

 $A \leftrightarrow B$ is a **proposition** that may be true or false depending on the truth values of the variables in A and B.

 $A \equiv B$ and $(A \leftrightarrow B) \equiv T$ have the same meaning.

$$\neg(b \land d) \equiv \neg b \land \neg d$$

Negate the statement:

"My code compiles or there is a bug."

To negate the statement, ask "when is the original statement false".

$$\neg(b \land d) \equiv \neg b \land \neg d$$

Negate the statement:

"My code compiles or there is a bug."

To negate the statement, ask "when is the original statement false".

It's false when not(my code compiles) AND not(there is a bug).

Translating back into English, we get:

My code doesn't compile and there is not a bug.

Example:
$$\neg(p \land q) \equiv (\neg p \lor \neg q)$$

p	q	$\neg p$	$\neg q$	$\neg p \lor \neg q$	p∧q	$\neg (p \land q)$	$\neg (p \land q) \leftrightarrow (\neg p \lor \neg q)$

F	F	Т	Т	Т	Т

Some Equivalences Related to Implication

$$p \rightarrow q$$
 $\equiv \neg p \vee q$
 $p \rightarrow q$ $\equiv \neg q \rightarrow \neg p$
 $p \leftrightarrow q$ $\equiv \neg p \leftrightarrow \neg q$

Properties of Logical Connectives

Identity

$$-p \wedge T \equiv p$$

$$- p \vee F \equiv p$$

Domination

$$- p \lor T \equiv T$$

$$- p \wedge F \equiv F$$

Idempotent

$$- p \lor p \equiv p$$

$$- p \wedge p \equiv p$$

Commutative

$$- p \lor q \equiv q \lor p$$

$$- p \wedge q \equiv q \wedge p$$

Associative

$$- (p \lor q) \lor r \equiv p \lor (q \lor r)$$

$$-(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$$

Distributive

$$\begin{cases} -p \land (q \lor r) \equiv (p \land q) \lor (p \land r) \\ -p \lor (q \land r) \equiv (p \lor q) \land (p \lor r) \end{cases}$$

Absorption

$$- p \lor (p \land q) \equiv p$$

$$- p \land (p \lor q) \equiv p$$

Negation

$$- p \lor \neg p \equiv T$$

$$-p \land \neg p \equiv F$$

Digital Circuits

Computing With Logic

- T corresponds to 1 or "high" voltage
- F corresponds to 0 or "low" voltage

Gates

- Take inputs and produce outputs (functions)
- Several kinds of gates
- Correspond to propositional connectives (most of them)

And Gate

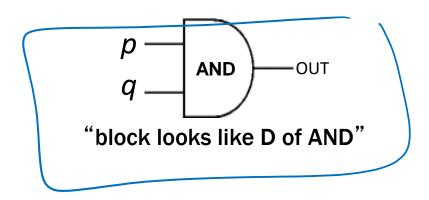

AND Connective vs.

0	1

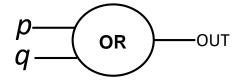

VS.

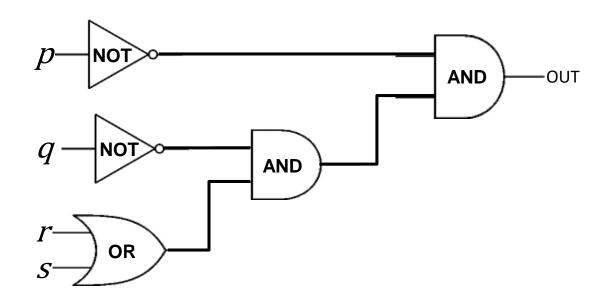

Blobs are Okay!

You may write gates using blobs instead of shapes!

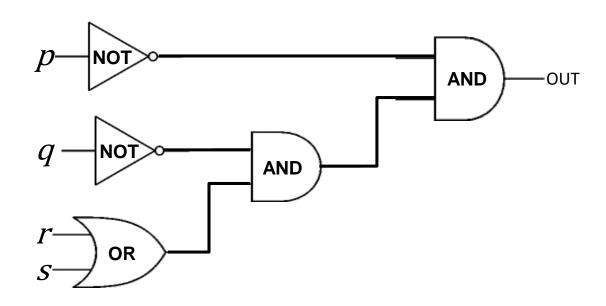

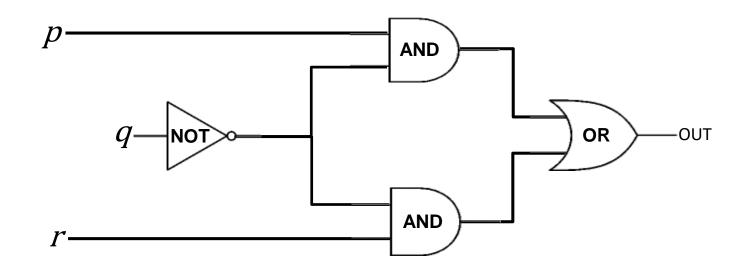

Values get sent along wires connecting gates

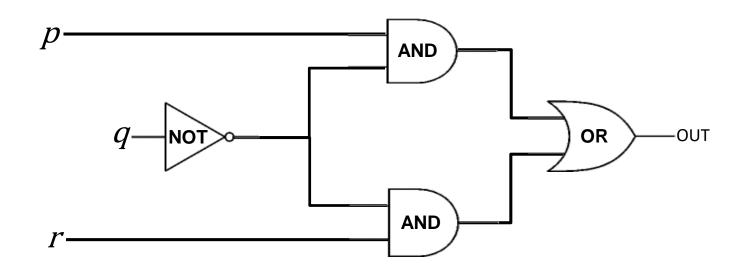

Values get sent along wires connecting gates

$$\neg p \land (\neg q \land (r \lor s))$$

Wires can send one value to multiple gates!

Wires can send one value to multiple gates!

$$(p \land \neg q) \lor (\neg q \land r)$$

Computing Equivalence

Describe an algorithm for computing if two logical expressions/circuits are equivalent.

What is the run time of the algorithm?

Compute the entire truth table for both of them!

There are 2^n entries in the column for *n* variables.

Some Familiar Properties of Arithmetic

•
$$x + y = y + x$$

(Commutativity)

•
$$x \cdot (y + z) = x \cdot y + x \cdot z$$
 (Distributivity)

•
$$(x + y) + z = x + (y + z)$$
 (Associativity)

Understanding Connectives

- Reflect basic rules of reasoning and logic
- Allow manipulation of logical formulas
 - Simplification
 - Testing for equivalence
- Applications
 - Query optimization
 - Search optimization and caching
 - Artificial Intelligence
 - Program verification
