---

## Lecture 22: DFAs and Finite State Machines with Output

# Finite State Machines

---

- States
- Transitions on input symbols
- Start state and final states
- The “language recognized” by the machine is the set of strings that reach a final state from the start

Old State	0	1
$s_0$	$s_0$	$s_1$
$s_1$	$s_0$	$s_2$
$s_2$	$s_0$	$s_3$
$s_3$	$s_3$	$s_3$

# Finite State Machines

---

- Each machine designed for strings over some fixed alphabet  $\Sigma$ .
- Must have a transition defined from each state for every symbol in  $\Sigma$ .

Old State	0	1
$s_0$	$s_0$	$s_1$
$s_1$	$s_0$	$s_2$
$s_2$	$s_0$	$s_3$
$s_3$	$s_3$	$s_3$

# Strings over $\{0, 1, 2\}$

---

$M_1$ : Strings with an even number of 2's

$M_2$ : Strings where the sum of digits mod 3 is 0

# Strings over $\{0, 1, 2\}$

---

$M_1$ : Strings with an even number of 2's

$M_2$ : Strings where the sum of digits mod 3 is 0

# What language does this machine recognize?

---

# What language does this machine recognize?

---

The set of all binary strings with # of 1's  $\equiv$  # of 0's (mod 2)  
(both are even or both are odd).

Can you think of a simpler description?

# Strings over $\{0, 1, 2\}$

---

$M_1$ : Strings with an even number of 2's

$M_2$ : Strings where the sum of digits mod 3 is 0

# Strings over $\{0,1,2\}$ w/ even number of 2's and mod 3 sum 0

---

# Strings over $\{0,1,2\}$ w/ even number of 2's and mod 3 sum 0

---

Strings over  $\{0,1,2\}$  w/ even number of 2's OR mod 3 sum 0?

---

# Strings over $\{0,1,2\}$ w/ even number of 2's OR mod 3 sum 0

---

The set of binary strings with a **1** in the **3<sup>rd</sup>** position from the start

---

The set of binary strings with a 1 in the 3<sup>rd</sup> position from the start

---

The set of binary strings with a **1** in the **3<sup>rd</sup>** position from the end

---

# 3 bit shift register “Remember the last three bits”

---

The set of binary strings with a 1 in the 3<sup>rd</sup> position from the end

---

The set of binary strings with a 1 in the 3<sup>rd</sup> position from the end

---

# The beginning versus the end

---

# Adding Output to Finite State Machines

---

- **So far we have considered finite state machines that just accept/reject strings**
  - called “Deterministic Finite Automata” or DFAs
- **Now we consider finite state machines that with output**
  - These are the kinds used as controllers

# Vending Machine, v0.1

---

Basic transitions on **N** (nickel), **D** (dime), **B** (butterfinger), **S** (snickers)

# Vending Machine, v0.2

---

Adding output to states: **N** – Nickel, **S** – Snickers, **B** – Butterfinger

# Vending Machine, v1.0

---

Adding additional “unexpected” transitions to cover all symbols for each state
