

CSE 311: Foundations of Computing

Lecture 26: Cardinality, Uncomputability

Last time: Languages and Representations

General Computation

Computers from Thought

The theory of computers as we know it grew out of a desire to avoid bugs in mathematical reasoning.

Hilbert in a famous speech at the International Congress of Mathematicians in 1900 set out the goal to **mechanize all of mathematics**.

In the 1930s, work of Gödel and Turing showed that Hilbert's program is **impossible**.

Gödel's Incompleteness Theorem

Undecidability of the Halting Problem

Both of these employ an idea we will see called **diagonalization**.

The ideas are simple but so revolutionary that their inventor Georg Cantor was shunned by the mathematical leaders of the time:

Poincaré referred to them as a “**grave disease infecting mathematics**.”

Kronecker fought to keep Cantor's papers out of his journals.

Cantor spent the last 30 years of his life battling depression, living often in “sanatoriums” (psychiatric hospitals).

$x \notin x$
 $\{x \in U \mid P(x)\}^*$

Cardinality

What does it mean that two sets have the same size?

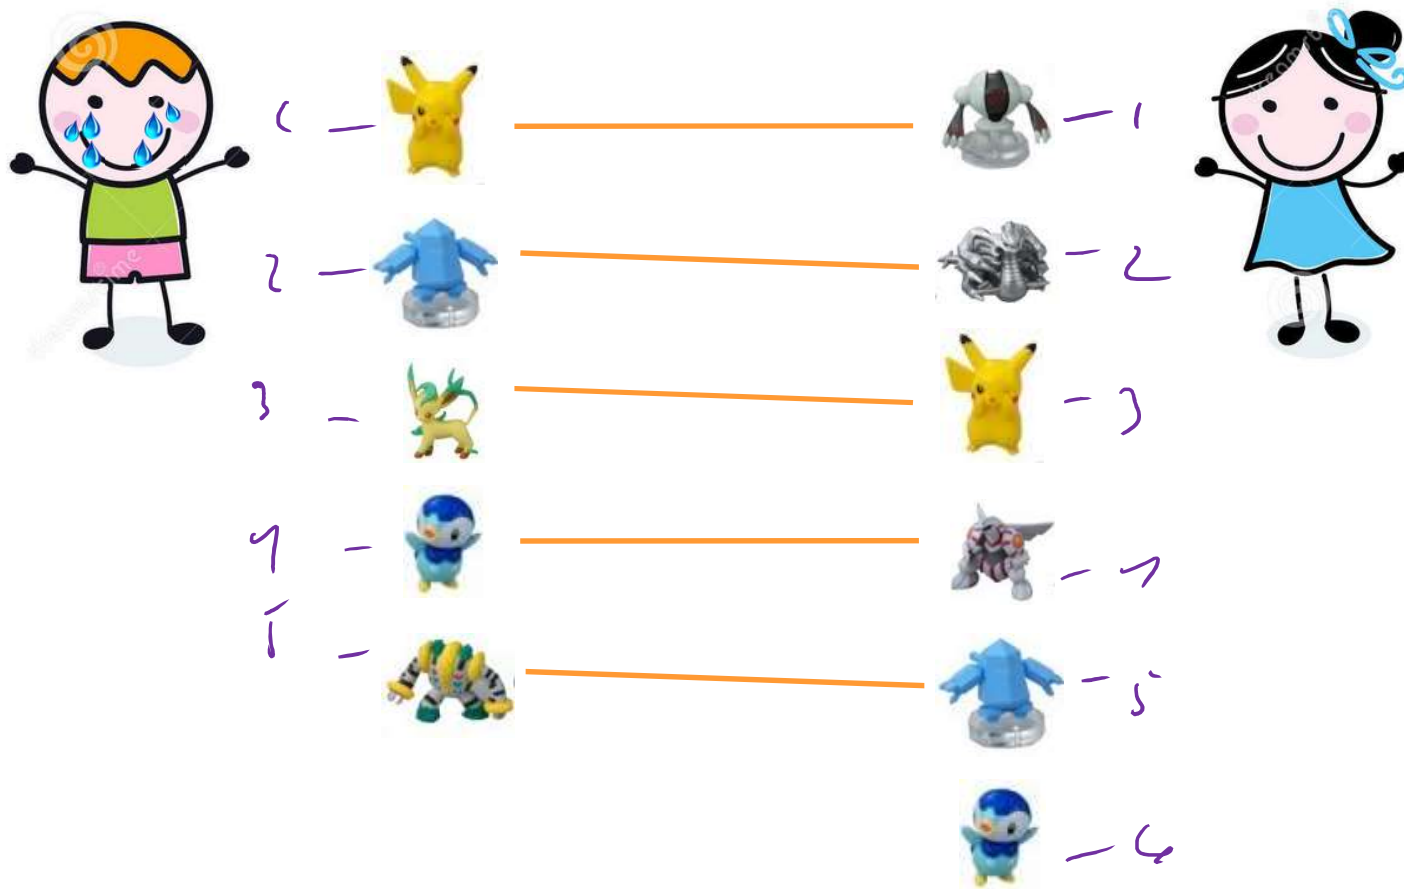

5

6

Cardinality

What does it mean that two sets have the same size?

1-1 and onto

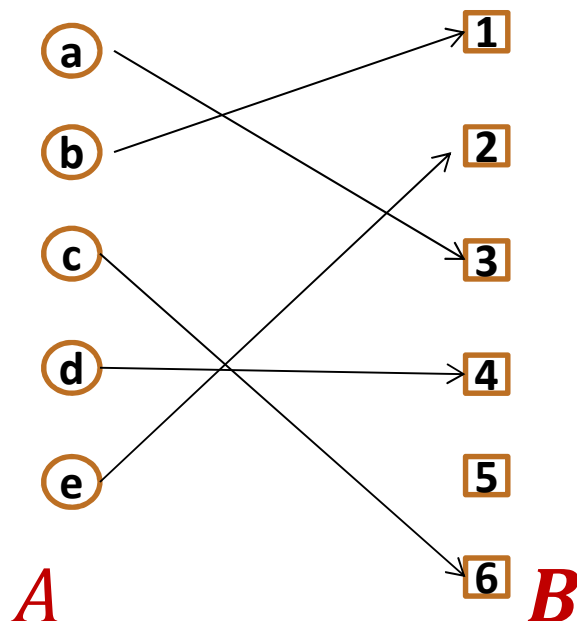

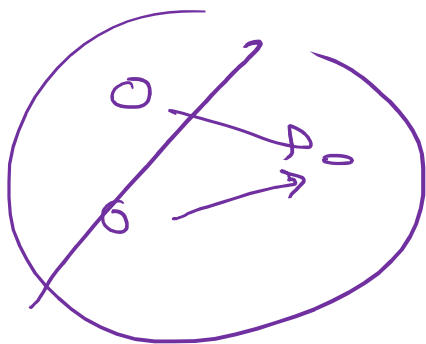

A function $f : A \rightarrow B$ is **one-to-one (1-1)** if every output corresponds to at most one input;

i.e. $f(x) = f(x') \Rightarrow x = x'$ for all $x, x' \in A$.

A **function** $f : A \rightarrow B$ is **onto** if every output gets hit;

i.e. for every $y \in B$, there exists $x \in A$ such that $f(x) = y$.

at least

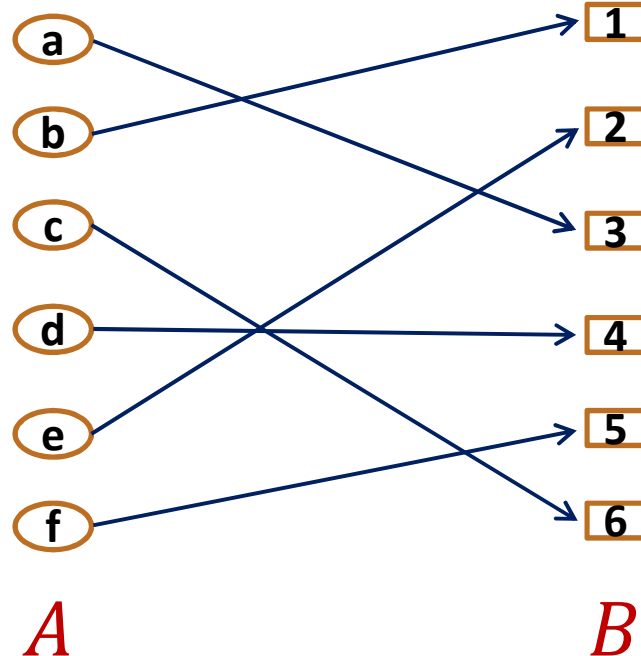

1-1 but not onto

Cardinality

Definition: Two sets A and B have the same **cardinality** if there is a one-to-one correspondence between the elements of A and those of B .

More precisely, if there is a **1-1 and onto** function $f : A \rightarrow B$.

The definition also makes sense for infinite sets!

Cardinality

Do the natural numbers and the even natural numbers have the same cardinality?

Yes!

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	...
0	2	4	6	8	10	12	14	16	18	20	22	24	26	28	...

What's the map $f : \mathbb{N} \rightarrow 2\mathbb{N}$? $f(n) = 2n$

Countable sets

Definition: A set is **countable** iff it has the same cardinality as some subset of \mathbb{N} .

Equivalent: A set **S** is countable iff there is an *onto* function **g** : $\mathbb{N} \rightarrow S$

$$\forall s \in S \exists n_s \in \mathbb{N} \\ \text{s.t. } g(n_s) = s.$$

Equivalent: A set **S** is countable iff we can order the elements
 $S = \{x_1, x_2, x_3, \dots\}$

$$\frac{\{n_s \mid s \in S\}}{\subset \mathbb{N}}$$

The set \mathbb{Z} of all integers

0 1 2 3 4 ...
↙ ↘ ↙ ↘
-1 -2 -3 -4 ...

$\mathbb{N} \cup$
 \mathbb{Z}_-
= \mathbb{Z}

0 -1 1 -2 2 -3 3 4 5 ...

The set \mathbb{Z} of all integers

0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 ...

0 1 -1 2 -2 3 -3 4 -4 5 -5 6 -6 7 -7 ...

The set \mathbb{Q} of rational numbers

$$\mathbb{Q} = \left\{ \frac{p}{q} \text{ in lowest terms} \right\}$$

$p \in \mathbb{Z}$
 $q \in \mathbb{N} \setminus \{0\}$

We can't do the same thing we did for the integers.

Between any two rational numbers there are an infinite number of others.

The set of positive rational numbers

1/1	1/2	1/3	1/4	1/5	1/6	1/7	1/8	...	1
2/1	2/2	2/3	2/4	2/5	2/6	2/7	2/8	...	2
3/1	3/2	3/3	3/4	3/5	3/6	3/7	3/8	...	}
4/1	4/2	4/3	4/4	4/5	4/6	4/7	4/8	...	
5/1	5/2	5/3	5/4	5/5	5/6	5/7	...		
6/1	6/2	6/3	6/4	6/5	6/6	...			
7/1	7/2	7/3	7/4	7/5				
...					

The set of positive rational numbers

The set of all positive rational numbers **is countable**.

$$\mathbb{Q}^+ = \{ \underbrace{1/1}, \underbrace{2/1, 1/2}, \underbrace{3/1, 2/2, 1/3}, \underbrace{4/1, 2/3, 3/2, 1/4}, \underbrace{5/1, 4/2, 3/3, 2/4, 1/5}, \dots \}$$

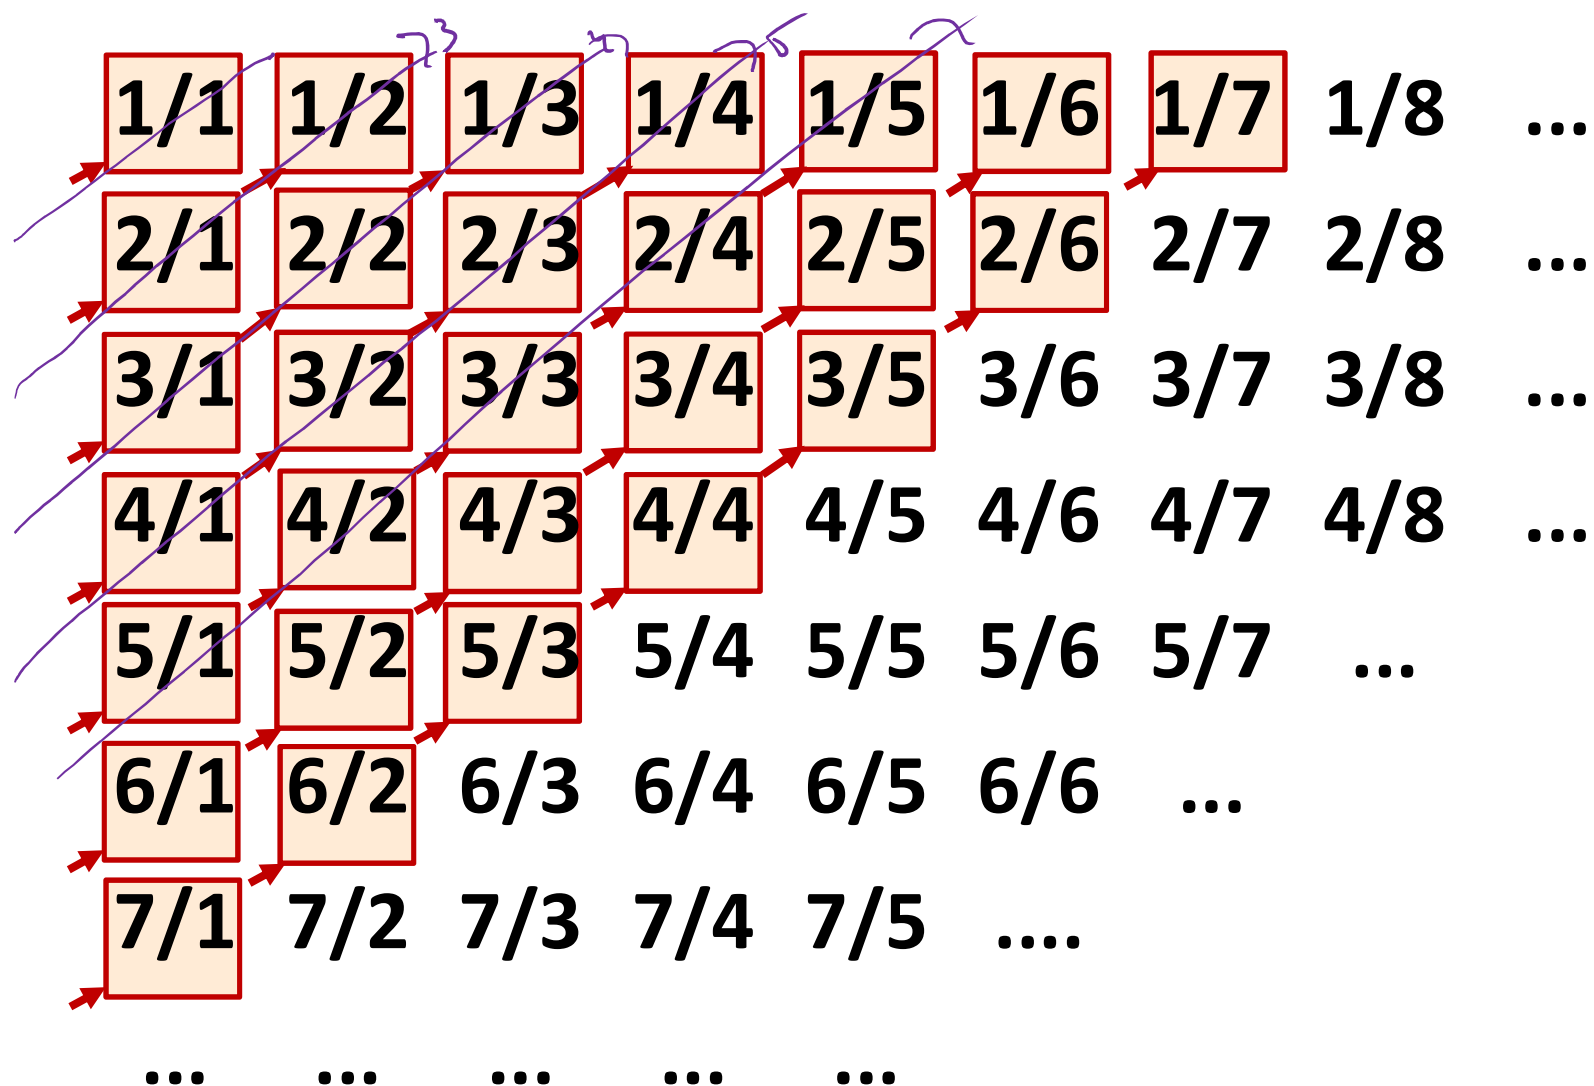

Handwritten notes: $\frac{p}{q}$ with an arrow pointing to $p+q$ above the ellipsis.

List elements in order of numerator+denominator, breaking ties according to denominator.

Only **k** numbers have total of sum of **$k + 1$** , so every positive rational number comes up some point.

The technique is called “**dovetailing**.”

The set of positive rational numbers

The set \mathbb{Q} of rational numbers

$$\mathbb{Q} = \mathbb{Q}_+ \cup \mathbb{Q}_-$$

$$\mathbb{Q}_+ \{x_1, x_2, x_3, \dots\}$$

$$\mathbb{Q}_- \{-x_1, -x_2, -x_3, \dots\}$$

$$\mathbb{Q} = 0, x_1, -x_1, x_2, -x_2, \dots$$

Claim: Σ^* is countable for every finite Σ

Dictionary/Alphabetical/Lexicographical order is bad

- Never get past the A's
- A, AA, AAA, AAAA, AAAAA, AAAAAA,

Claim: Σ^* is countable for every finite Σ

Dictionary/Alphabetical/Lexicographical order is bad

- Never get past the A's
- A, AA, AAA, AAAA, AAAAA, AAAAAA,

Instead, use same “dovetailing” idea, except that we first break ties based on length: only $|\Sigma|^k$ strings of length k .

e.g. $\{0,1\}^*$ is countable:

$\{\epsilon, 0, 1, 00, 01, 10, 11, 000, 001, 010, 011, 100, 101, 110, 111,$

 $\dots\}$

The set of all Java programs is countable

Java programs are just strings in Σ^* where Σ is the alphabet of ASCII characters.

Since Σ^* is countable, so is the set of all Java programs.

OK OK... Is Everything Countable ?!!

Are the real numbers countable?

Theorem [Cantor]:

The set of real numbers between 0 and 1 is not countable.

Proof will be by contradiction. Using a new method called diagonalization.

Real numbers between 0 and 1: $[0,1)$

Every number between 0 and 1 has an infinite decimal expansion:

$$1/2 = 0.500000000000000000000000000000...$$

$$1/3 = 0.333333333333333333333333333333...$$

$$1/7 = 0.14285714285714285714285714285...$$

$$\pi-3 = 0.14159265358979323846264...$$

$$1/5 = 0.199999999999999999999999999999...$$

$$= 0.200000000000000000000000000000...$$

Representation is unique except for the cases that the decimal expansion ends in all 0's or all 9's. We will never use the all 9's representation.

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

r_1	0.50000000...
r_2	0.33333333...
r_3	0.14285714...
r_4	0.14159265...
r_5	0.12122122...
r_6	0.25000000...
r_7	0.71828182...
r_8	0.61803394...
...	...

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4	5	6	7	8	9	...
r_1	0.	5	0	0	0	0	0	0	0
r_2	0.	3	3	3	3	3	3	3	3
r_3	0.	1	4	2	8	5	7	1	4
r_4	0.	1	4	1	5	9	2	6	5
r_5	0.	1	2	1	2	2	1	2	2
r_6	0.	2	5	0	0	0	0	0	0
r_7	0.	7	1	8	2	8	1	8	2
r_8	0.	6	1	8	0	3	3	9	4
...

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4	5	6	7	8	9	...
r_1	0.	5	0	0	0	0	0	0	0
r_2	0.	3	3	3	3	3	3	3	3
r_3	0.	1	4	2	8	5	7	1	4
r_4	0.	1	4	1	5	9	2	6	5
r_5	0.	1	2	1	2	2	1	2	2
r_6	0.	2	5	0	0	0	0	0	0
r_7	0.	7	1	8	2	8	1	8	2
r_8	0.	6	1	8	0	3	3	9	4
...

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4	<div>Flipping rule: Only if the other driver deserves it.</div>					
r_1	0.	5	0	0	0						
r_2	0.	3	3	3	3						
r_3	0.	1	4	2	8	5	7	1	4
r_4	0.	1	4	1	5	9	2	6	5
r_5	0.	1	2	1	2	2	1	2	2
r_6	0.	2	5	0	0	0	0	0	0
r_7	0.	7	1	8	2	8	1	8	2
r_8	0.	6	1	8	0	3	3	9	4
...

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4						
r_1	0.	5 ¹	0	0	0						
r_2	0.	3	3 ⁵	3	3						
r_3	0.	1	4	2 ⁵	8	5	7	1	4
r_4	0.	1	4	1	5 ¹	9	2	6	5
r_5	0.	1	2	1	2	2 ⁵	1	2	2
r_6	0.	2	5	0	0	0	0 ⁵	0	0
r_7	0.	7	1	8	2	8	1	8 ⁵	2
r_8	0.	6	1	8	0	3	3	9	4 ⁵
...

Flipping rule:

If digit is 5, make it 1.

If digit is not 5, make it 5.

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4						
r_1	0.	5 ¹	0	0	0						
r_2	0.	3	3 ⁵	3	3						
r_3	0.	1	4	2 ⁵	8	5	7	1	4
r_4	0.	1	4	1	5 ¹	9	2	6	5
r_5	0.	1	2	1	2	2 ⁵	1	2	2
r_6	0.	2	5	0	0	0	0 ⁵	0	0
r_7	0.	7	1	8	2	8	1	8 ⁵	2

Flipping rule:

If digit is 5, make it 1.

If digit is not 5, make it 5.

If diagonal element is $0.x_{11}x_{22}x_{33}x_{44}x_{55}\dots$ then let's call the flipped number $0.\hat{x}_{11}\hat{x}_{22}\hat{x}_{33}\hat{x}_{44}\hat{x}_{55}\dots$

It cannot appear anywhere on the list!

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4
r_1	0.	5 ¹	0	0	0
r_2	0.	3	3 ⁵	3	3
r_3	0.	1	4	2 ⁵	8
r_4	0.	1	4	1	5 ¹

Flipping rule:

If digit is 5, make it 1.

If digit is not 5, make it 5.

For every $n \geq 1$:

$$r_n \neq 0.\hat{x}_{11}\hat{x}_{22}\hat{x}_{33}\hat{x}_{44}\hat{x}_{55} \dots$$

because the numbers differ on the n -th digit!

5	7	1	4
9	2	6	5
2 ⁵	1	2	2
0	0 ⁵	0	0
8	1	8 ⁵	2

If diagonal element is $0.x_{11}x_{22}x_{33}x_{44}x_{55} \dots$ then let's call the flipped number $0.\hat{x}_{11}\hat{x}_{22}\hat{x}_{33}\hat{x}_{44}\hat{x}_{55} \dots$

It cannot appear anywhere on the list!

Proof that $[0,1)$ is not countable

Suppose, for the sake of contradiction, that there is a list of them:

		1	2	3	4
r_1	0.	5 ¹	0	0	0
r_2	0.	3	3 ⁵	3	3
r_3	0.	1	4	2 ⁵	8
r_4	0.	1	4	1	5 ¹

Flipping rule:

If digit is 5, make it 1.

If digit is not 5, make it 5.

For every $n \geq 1$:

$r_n \neq 0.\hat{x}_{11}\hat{x}_{22}\hat{x}_{33}\hat{x}_{44}\hat{x}_{55} \dots$

because the numbers differ on the n -th digit!

5	7	1	4
9	2	6	5
2 ⁵	1	2	2
0	0 ⁵	0	0
8	1	8 ⁵	2

So the list is incomplete, which is a contradiction.

Thus the real numbers between 0 and 1 are **not countable**: “uncountable”

The set of all functions $f : \mathbb{N} \rightarrow \{0, \dots, 9\}$ is uncountable

The set of all functions $f : \mathbb{N} \rightarrow \{0, \dots, 9\}$ is uncountable

Supposed listing of all the functions:

	1	2	3	4	5	6	7	8	9	...
f ₁	5	0	0	0	0	0	0	0
f ₂	3	3	3	3	3	3	3	3
f ₃	1	4	2	8	5	7	1	4
f ₄	1	4	1	5	9	2	6	5
f ₅	1	2	1	2	2	1	2	2
f ₆	2	5	0	0	0	0	0	0
f ₇	7	1	8	2	8	1	8	2
f ₈	6	1	8	0	3	3	9	4
...	

The set of all functions $f : \mathbb{N} \rightarrow \{0, \dots, 9\}$ is uncountable

Supposed listing of all the functions:

[illegible]

The set of all functions $f : \mathbb{N} \rightarrow \{0, \dots, 9\}$ is uncountable

Supposed listing of all the functions:

	1	2	3	4	<div>Flipping rule:</div> <div>If $f_n(n) = 5$, set $D(n) = 1$</div> <div>If $f_n(n) \neq 5$, set $D(n) = 5$</div>					
f_1	5 ¹	0	0	0						
f_2	3	3 ⁵	3	3						
f_3	1	4	2 ⁵	8						
f_4	1	4	1	5 ¹	9	2	6	5
f_5	1	2	1	2	2 ⁵	1	2	2
f_6	2	5	0	0	0	0 ⁵	0	0
f_7	7	1	8	2	8	1	8 ⁵	2

For all n , we have $D(n) \neq f_n(n)$. Therefore $D \neq f_n$ for any n and the list is incomplete! $\Rightarrow \{f \mid f: \mathbb{N} \rightarrow \{0, 1, \dots, 9\}\}$ is **not** countable

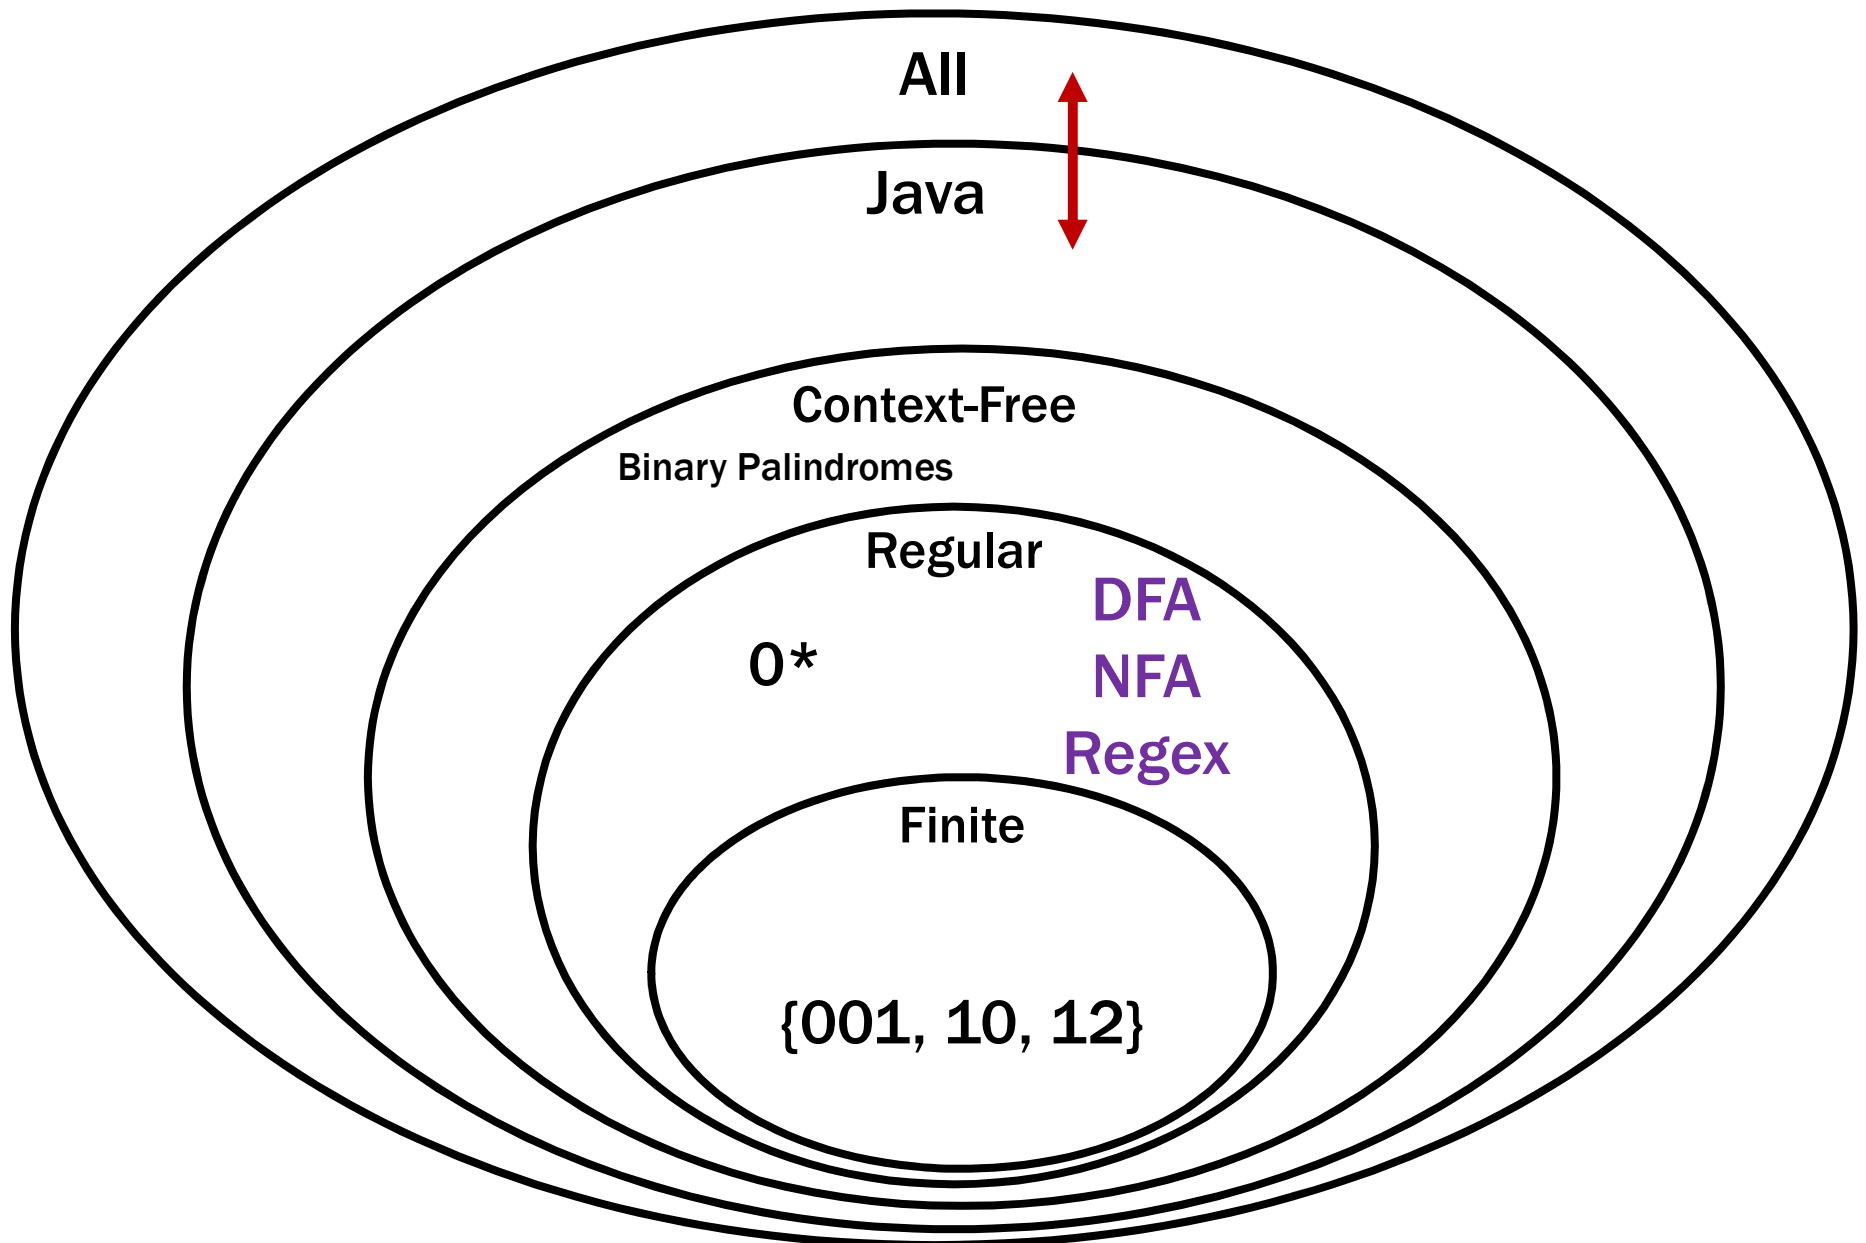

Uncomputable functions

We have seen that:

- The set of all (Java) programs is countable
- The set of all functions $f : \mathbb{N} \rightarrow \{0, \dots, 9\}$ is not countable

So: There must be some function $f : \mathbb{N} \rightarrow \{0, \dots, 9\}$ that is not computable by any program!

Recall our language picture

Uncomputable functions

Interesting... maybe.

Can we come up with an explicit function that is uncomputable?
