Quiz Section 8: CFGs, Relations, Graphs, and FSMs

Task 1 – CFGs

Give CFGs for each of the following languages. “Document” all the non-start variables in your grammar with an English description of the set of strings it generates. (You do not need to document the start variable because it is documented by the problem statement.)

a) All binary strings that end in 00.

b) All binary strings that contain at least three 1’s.

c) All strings over \{0,1,2\} with the same number of 1s and 0s and exactly one 2.
   
   _Hint_: Try modifying the grammar from lecture for binary strings with the same number of 1s and 0s. (You may need to introduce new variables in the process.)

Task 2 – Good, Good, Good, Good Relations

Each part below defines a relation $R$ on a set. For each part, first state whether $R$ is reflexive, symmetric, antisymmetric, and/or transitive. Second, if a relation does not have a property, then state a counterexample. (If a relation does have a property, you don’t need to do anything other than saying so.)

a) Let $R = \{(x, y) : x = y + 1\}$ on $\mathbb{N}$.

b) Let $R = \{(x, y) : x^2 = y^2\}$ on $\mathbb{R}$.

Task 3 – Relations

Let $A$ be a set, and let $R$ and $S$ be relations on $A$. Suppose that $R$ is reflexive.

a) Prove that $R \cup S$ is reflexive.

b) Prove that $R \subseteq R^2$. (Remember that $R^2$ is defined to be $R \circ R$.)
**Task 4 – Closure**

Draw the transitive-reflexive closure of \{(1, 2), (2, 3), (3, 4)\} as a directed graph. We have drawn the vertices for you.

![Directed Graph Diagram](image)

**Task 5 – String Relations**

Let \(\Sigma = \{0, 1\}\). Define the relation \(R\) on \(\Sigma^*\) by \((x, y) \in R\) if and only if \(\text{len}(xy)\) is even. (Here \(xy\) is notation for the concatenation of the two strings \(x\) and \(y\) and \(\text{len}\) refers to the length of the string.)

*Hint:* In your proofs below, you may use the fact from lecture that \(\text{len}(xy) = \text{len}(x) + \text{len}(y)\).

a) Prove that \(R\) is reflexive.

b) Prove that \(R\) is symmetric.

c) Prove that \(R\) is transitive.

d) Is \(R\) antisymmetric? If so, prove it. If not, give a counterexample.

**Task 6 – DFAs, Stage 1**

Let \(\Sigma = \{0, 1, 2, 3\}\). Construct DFAs to recognize each of the following languages. For all states in your DFA, include “documentation” for them by describing, in English, the set of strings that *end* in that state.

a) All binary strings.

b) All strings whose digits sum to an even number.

c) All strings whose digits sum to an odd number.

**Task 7 – DFAs, Stage 2**

Let \(\Sigma = \{0, 1\}\). Construct DFAs to recognize each of the following languages. For all states in your DFA, include “documentation” for them by describing, in English, the set of strings that *end* in that state.

a) All strings that do not contain the substring 101.

b) All strings containing at least two 0’s and at most one 1.

c) All strings containing an even number of 1’s and an odd number of 0’s and not containing the substring 10.
