

## Quiz Section 6: Ordinary, Strong, and Structural Induction

### Task 1 – Midterm Review: Translation

---

Let your domain of discourse be all coffee drinks. You should use the following predicates:

- $\text{soy}(x)$  is true iff  $x$  contains soy milk.
- $\text{whole}(x)$  is true iff  $x$  contains whole milk.
- $\text{sugar}(x)$  is true iff  $x$  contains sugar
- $\text{decaf}(x)$  is true iff  $x$  is not caffeinated.
- $\text{vegan}(x)$  is true iff  $x$  is vegan.
- $\text{RobbieLikes}(x)$  is true iff Robbie likes the drink  $x$ .

Translate each of the following statements into predicate logic. You may use quantifiers, the predicates above, and usual math connectors like  $=$  and  $\neq$ .

- a) Coffee drinks with whole milk are not vegan.
- b) Robbie only likes one coffee drink, and that drink is not vegan.
- c) There is a drink that has both sugar and soy milk.

Translate the following symbolic logic statement into a (natural) English sentence. Take advantage of domain restriction.

$$\forall x([\text{decaf}(x) \wedge \text{RobbieLikes}(x)] \rightarrow \text{sugar}(x))$$

### Task 2 – Casting Out Nines

---

Let  $m \in \mathbb{N}$ . This problem proves that if  $9|m$ , then the sum of the digits of  $m$  is a multiple of 9. (It actually proves a bit more.) In order to state this one needs the base 10 representation of  $m$ . Write  $m = (d_n d_{n-1} \cdots d_1 d_0)_{10}$  where  $d_0, \dots, d_n$  are the base-10 digits of  $m$ ; that is, each  $d_0, \dots, d_n \in \{0, 1, 2, \dots, 9\}$  and  $m = \sum_{i=0}^n d_i 10^i$ .

Prove that casting out nines works for all  $m \in \mathbb{N}$  by induction on the number of digits of  $m$  by showing that  $m$  and the sum of its digits are equivalent modulo 9. We can write this using summation notation as: Prove that for all  $n \in \mathbb{N}$ ,  $\sum_{i=0}^n d_i 10^i \equiv \sum_{i=0}^n d_i \pmod{9}$  for all  $d_0, \dots, d_n \in \{0, 1, 2, \dots, 9\}$ . (In other words, prove that for all  $n \in \mathbb{N}$ , for all  $d_0, \dots, d_n \in \{0, 1, 2, \dots, 9\}$ ,

$$d_0 + 10^1 \cdot d_1 + 10^2 \cdot d_2 + \cdots + 10^n \cdot d_n \equiv d_0 + d_1 + d_2 + \cdots + d_n \pmod{9}.$$

### Task 3 – In Harmony with Ordinary Induction

---

Define

$$H_i = \sum_{j=1}^i \frac{1}{j} = 1 + \frac{1}{2} + \cdots + \frac{1}{i}$$

The numbers  $H_i$  are called the *harmonic* numbers.

Prove that  $H_{2^n} \geq 1 + \frac{n}{2}$  for all integers  $n \geq 0$ .

### Task 4 – Induction with Formulas

---

These problems are a little more abstract.

- a) i. Show that given two sets  $A$  and  $B$  that  $\overline{A \cup B} = \overline{A} \cap \overline{B}$ . (Don't use induction.)  
ii. Show using induction that for an integer  $n \geq 2$ , given  $n$  sets  $A_1, A_2, \dots, A_{n-1}, A_n$  that

$$\overline{A_1 \cup A_2 \cup \cdots \cup A_{n-1} \cup A_n} = \overline{A_1} \cap \overline{A_2} \cap \cdots \cap \overline{A_{n-1}} \cap \overline{A_n}$$

- b) i. Show that given any integers  $a, b$ , and  $c$ , if  $c \mid a$  and  $c \mid b$ , then  $c \mid (a+b)$ . (Don't use induction.)  
ii. Show using induction that for any integer  $n \geq 2$ , given  $n$  numbers  $a_1, a_2, \dots, a_{n-1}, a_n$ , for any integer  $c$  such that  $c \mid a_i$  for  $i = 1, 2, \dots, n$ , that

$$c \mid (a_1 + a_2 + \cdots + a_{n-1} + a_n).$$

In other words, if a number divides each term in a sum then that number divides the sum.

### Task 5 – Cantelli's Rabbits

---

Xavier Cantelli owns some rabbits. The number of rabbits he has in year  $n$  is described by the function  $f(n)$ :

$$\begin{aligned} f(0) &= 0 \\ f(1) &= 1 \\ f(n) &= 2f(n-1) - f(n-2) \text{ for } n \geq 2 \end{aligned}$$

Determine, with proof, the number,  $f(n)$ , of rabbits that Cantelli owns in year  $n$ . That is, construct a formula for  $f(n)$  and prove its correctness.

### Task 6 – Strong Induction

---

Consider the function  $a(n)$  defined for  $n \geq 1$  recursively as follows.

$$\begin{aligned} a(1) &= 1 \\ a(2) &= 3 \\ a(n) &= 2a(n-1) - a(n-2) \text{ for } n \geq 3 \end{aligned}$$

Use strong induction to prove that  $a(n) = 2n - 1$  for all  $n \geq 1$ .
