Order of Operations

1. Parentheses
2. Negation
3. And
4. Or, exclusive or
5. Implication
6. Biconditional

For this class: each numbered set is it's own level!
e.g. "and"s have precedence over "or"s

Within a level, apply every operator at that level from left to right.

Other authors place And, Or at the same level – it's good practice to use parentheses even if not required.
