CSE 311 Section 08

Induction, Regular Expressions, CFGs
Administrivia
Announcements & Reminders

● Homework 6 was due Wednesday (2/21)
● Midterm grades have been released!
  ○ Regrade requests are open
  ○ Concerns about grades: Read Robbie’s post on Ed!
● Check your section participation grade on gradescope
  ○ If it different than what you expect, let your TA know
Recursively Defined Sets
Recursive Definition of Sets

Define a set $S$ as follows:

Basis Step:
Describe the basic starting elements in your set
ex: $0 \in S$

Recursive Step:
Describe how to derive new elements of the set from previous elements
ex: If $x \in S$ then $x + 2 \in S$.

Exclusion Rule: Every element of $S$ is in $S$ from the basis step (alone) or a finite number of recursive steps starting from a basis step.
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

a) Binary strings not containing 10.

a) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

a) Binary strings containing at most two 0s and at most two 1s.

Work on this problem with the people around you.
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

*Generate accepted and rejected strings first!*
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

   *Generate accepted and rejected strings first!*

   **Step 1:** Write out basic cases and more intricate cases
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

*Generate accepted and rejected strings first!*

**Step 1:** Write out basic cases and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>ε</td>
<td>0</td>
</tr>
<tr>
<td>11</td>
<td>1</td>
</tr>
<tr>
<td>10101010</td>
<td>1010101</td>
</tr>
<tr>
<td>10101011</td>
<td>010101011</td>
</tr>
</tbody>
</table>
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

Generate accepted and rejected strings first!

Step 1: Write out basic cases and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>ε</td>
<td>0</td>
</tr>
<tr>
<td>11</td>
<td>1</td>
</tr>
<tr>
<td>10101010</td>
<td>1010101</td>
</tr>
<tr>
<td>10101011</td>
<td>010101011</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

Generate accepted and rejected strings first!

Step 1: Write out basic cases and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>ε</td>
<td>0</td>
</tr>
<tr>
<td>11</td>
<td>1</td>
</tr>
<tr>
<td>10101010</td>
<td>10101011</td>
</tr>
<tr>
<td>10101011</td>
<td>010101011</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!

All even-length strings can be generated from a series of substrings of length 2!

All possible substrings of length 2 are: 10, 01, 11, 00
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

Step 3: Write out Basis and Recursive step
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

**Step 3: Write out Basis and Recursive step**

**Basis:** $\varepsilon \in S$

**Recursive Step:** If $x \in S$, then $x00, x01, x10, x11 \in S$
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

**Step 3:** Write out Basis and Recursive step

* Basis: \( \varepsilon \in S \)

* Recursive Step: If \( x \in S \), then \( x00, x01, x10, x11 \in S \)

**Step 4:** check that you cannot build the rejected strings and only build accepted strings with the recursive step
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

a) Binary strings of even length.

Step 3: Write out Basis and Recursive step

Basis: $\varepsilon \in S$

Recursive Step: If $x \in S$, then $x00, x01, x10, x11 \in S$

Step 4: check that you cannot build the rejected strings and only build accepted strings with the recursive step

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>$\varepsilon$</td>
<td>0</td>
</tr>
<tr>
<td>11</td>
<td>1</td>
</tr>
<tr>
<td>10101010</td>
<td>1010101</td>
</tr>
<tr>
<td>10101011</td>
<td>010101011</td>
</tr>
</tbody>
</table>
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) Binary strings not containing 10.
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) Binary strings not containing 10.

Step 1: Write out basic cases and more intricate cases
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) Binary strings not containing 10.

**Step 1: Write out basic cases and more intricate cases**

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>010</td>
</tr>
<tr>
<td>0</td>
<td>10</td>
</tr>
<tr>
<td>ε</td>
<td>100</td>
</tr>
<tr>
<td>111</td>
<td>1110</td>
</tr>
<tr>
<td>00001</td>
<td>100001</td>
</tr>
</tbody>
</table>
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) Binary strings not containing 10.

Step 1: Write out basic cases and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>010</td>
</tr>
<tr>
<td>0</td>
<td>10</td>
</tr>
<tr>
<td>ε</td>
<td>100</td>
</tr>
<tr>
<td>111</td>
<td>1110</td>
</tr>
<tr>
<td>00001</td>
<td>100001</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!
### Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) **Binary strings not containing 10.**

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>010</td>
</tr>
<tr>
<td>0</td>
<td>10</td>
</tr>
<tr>
<td>ε</td>
<td>100</td>
</tr>
<tr>
<td>111</td>
<td>1110</td>
</tr>
<tr>
<td>00001</td>
<td>100001</td>
</tr>
</tbody>
</table>

**Step 1:** Write out basic cases and more intricate cases

**Step 2:** Find a pattern!

- 0’s and 1’s cannot be in the same string **unless** 0’s come first and 1’s come second
- 0’s should be **built from the left** (0x)
- 1’s should be **built from the right** (x1)
- such strings that have 1’s and 0’s can only look like: 000…111
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) Binary strings not containing 10.

Step 3: Write out Basis and Recursive step
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

b) Binary strings not containing 10.

**Step 3:** Write out Basis and Recursive step

If the string does not contain 10, then the first 1 in the string can only be followed by more 1s. Hence, it must be of the form $0^m1^n$ for some $m, n \in \mathbb{N}$.

**Basis:** $\varepsilon \in S$

**Recursive Step:** If $x \in S$, then $0x \in S$ and $x1 \in S$

**Step 4:** check that you cannot build the rejected strings and only build accepted strings with the recursive step :)
c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

Step 1: Write out basic cases and more intricate cases
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

**Step 1: Write out basic cases and more intricate cases**

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>010</td>
</tr>
<tr>
<td>01</td>
<td>0</td>
</tr>
<tr>
<td>ε</td>
<td>100</td>
</tr>
<tr>
<td>111</td>
<td>1110</td>
</tr>
<tr>
<td>00001111</td>
<td>000001</td>
</tr>
</tbody>
</table>
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

Step 1: Write out basic cases and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>010</td>
</tr>
<tr>
<td>01</td>
<td>0</td>
</tr>
<tr>
<td>ε</td>
<td>100</td>
</tr>
<tr>
<td>111</td>
<td>1110</td>
</tr>
<tr>
<td>00001111</td>
<td>00001</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

Step 1: Write out basic cases and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>010</td>
</tr>
<tr>
<td>01</td>
<td>0</td>
</tr>
<tr>
<td>ε</td>
<td>100</td>
</tr>
<tr>
<td>111</td>
<td>1110</td>
</tr>
<tr>
<td>00001111</td>
<td>00001</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!

From part (b) we know:
0’s should be **built from the left** (0x)
1’s should be **built from the right** (x1)

**New restriction** for adding a 0:
for every 0 we add, there must be **at least** an additional 1 accompanying it so we always have # 1’s ≥ # 0’s

So let's change: 0x to 0x1
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

Step 3: Write out Basis and Recursive step
Problem 3 – Recursively Defined Sets

For each of the following, write a recursive definition of the sets satisfying the following properties. Briefly justify that your solution is correct.

c) Binary strings not containing 10 as a substring and having at least as many 1s as 0s.

Step 3: Write out Basis and Recursive step

These must be of the form $0^m1^n$ for some $m, n \in \mathbb{N}$ with $m \leq n$. We can ensure that by pairing up the 0s with 1s as they are added:

Basis: $\varepsilon \in S$.

Recursive Step: If $x \in S$, then $0x1 \in S$ and $x1 \in S$.

Step 4: check that you cannot build the rejected strings and only build accepted strings with the recursive step :)
Regular Expressions
Regular Expressions

Basis:
- $\varepsilon$ is a regular expression. The empty string itself matches the pattern (and nothing else does).
- $\emptyset$ is a regular expression. No strings match this pattern.
- $a$ is a regular expression, for any $a \in \Sigma$ (i.e. any character). The character itself matching this pattern.

Recursive:
- If $A, B$ are regular expressions then $(A \cup B)$ is a regular expression. matched by any string that matches $A$ or that matches $B$ [or both]).
- If $A, B$ are regular expressions then $AB$ is a regular expression. matched by any string $x$ such that $x = yz$, $y$ matches $A$ and $z$ matches $B$.
- If $A$ is a regular expression, then $A^*$ is a regular expression. matched by any string that can be divided into 0 or more strings that match $A$. 
Regular Expressions

A regular expression is a recursively defined set of strings that form a language.

A regular expression will generate all strings in a language, and won’t generate any strings that ARE NOT in the language.

Hints:
• Come up with a few examples of strings that ARE and ARE NOT in your language
• Then, after you write your regex, check to make sure that it CAN generate all of your examples that are in the language, and it CAN’T generate those that are not
Problem 1 – Regular Expressions

a) Write a regular expression that matches base 10 numbers (e.g., there should be no leading zeroes).

b) Write a regular expression that matches all base-3 numbers that are divisible by 3.

c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

e) Write a regular expression that matches all binary strings of the form $1^k y$, where $k \geq 1$ and $y \in \{0,1\}^*$ has at least $k$ 1’s.

Work on this problem with the people around you.
Problem 1 – Regular Expressions

a) Write a regular expression that matches base 10 numbers (e.g., there should be no leading zeroes).

**base-10 numbers:**
Our everyday numbers!
Notice we have 10 symbols (0-9) to represent numbers.

256: \((2 \times 10^2) + (5 \times 10^1) + (6 \times 10^0)\)

**base-2 numbers:** (binary)

10: \((1 \times 2^1) + (0 \times 2^0)\)
Problem 1 – Regular Expressions

a) Write a regular expression that matches base 10 numbers (e.g., there should be no leading zeroes).

Representing numbers all possible strings using numbers 0-9:

⚠ The Kleene-star has us generating any number of 0’s

…without the substring “000”

Use careful case-work to modify this and produce only 0,1,or two 0’s
Problem 1 – Regular Expressions

c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

all binary strings that contain the substring “111”

\[(0 \cup 1)^* \ 111 \ (0 \cup 1)^*\]

⚠ The Kleene-star has us generating any number of 0’s

…without the substring “000”

Use careful case-work to modify this and produce only 0,1,or two 0’s

\[(0 \cup 00 \cup \epsilon)^* \ 111 \ (0 \cup 00 \cup \epsilon) \ (1)^*\]
c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

all binary strings that contain the substring “111”

\[(0 \cup 1)^* 111 (0 \cup 1)^*\]

...without the substring “000”

Use careful case-work to modify this and produce only 0, 1, or two 0’s

\[(0 \cup 00 \cup \varepsilon)^* 111 (0 \cup 00 \cup \varepsilon)(1)^*\]
Problem 1 – Regular Expressions

c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

all binary strings that contain the substring “111”

\[(0 \cup 1)^* 111 (0 \cup 1)^*\]

…without the substring “000”

Use careful case-work to modify this and produce only 0,1, or two 0’s

\[(0 \cup 00 \cup \varepsilon)(1)^* 111 (0 \cup 00 \cup \varepsilon)(1)^*\]

\[(0 \cup 00 \cup \varepsilon)(01 \cup 001 \cup 1)^* 111 (0 \cup 00 \cup \varepsilon)(01 \cup 001 \cup 1)^*\]
Problem 1 – Regular Expressions

c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

all binary strings that contain the substring “111”

\[(0 \cup 1)^* \, 111 \, (0 \cup 1)^*\]

⚠ The Kleene-star has us generating any number of 0’s

…without the substring “000”

Use careful case-work to modify this and produce only 0, 1, or two 0’s

\[(0 \cup 00 \cup \epsilon) \, (1)^* \, 111 \, (0 \cup 00 \cup \epsilon) \, (1)^*\]

⚠ Cannot produce 1’s with “0” or “00” like “1011101”

\[(0 \cup 00 \cup \epsilon) \, (01 \cup 001 \cup 1)^* \, 111 \, (0 \cup 00 \cup \epsilon) \, (01 \cup 001 \cup 1)^*\]

⚠ Generates “000” like “00 01 111”
Problem 1 – Regular Expressions

c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

all binary strings that contain the substring “111”

\[(0 \cup 1)^* 111 (0 \cup 1)^*\] ⚠ The Kleene-star has us generating any number of 0’s

...without the substring “000”

Use careful case-work to modify this and produce only 0, 1, or two 0’s

\[(0 \cup 00 \cup \varepsilon) (1)^* 111 (0 \cup 00 \cup \varepsilon) (1)^*\] ⚠ Cannot produce 1’s with “0” or “00” like “1011101"

\[(0 \cup 00 \cup \varepsilon) (01 \cup 001 \cup 1)^* 111 (0 \cup 00 \cup \varepsilon) (01 \cup 001 \cup 1)^*\] ⚠ Generates “000” like “00 01 111”

\[(01 \cup 001 \cup 1)^* (0 \cup 00 \cup \varepsilon) 111 (01 \cup 001 \cup 1)^* (0 \cup 00) \] ✓ all binary strings with “111” and without “000”
Problem 1 – Regular Expressions

c) Write a regular expression that matches all binary strings that contain the substring “111”, but not the substring “000”.

all binary strings that contain the substring “111”

\[(0 \cup 1)^* 111 (0 \cup 1)^*\]

…without the substring “000”

Use careful case-work to modify this and produce only 0,1,or two 0’s

\[(0 \cup 00 \cup \varepsilon) (1)^* 111 (0 \cup 00 \cup \varepsilon) (1)^*\] ⚠ Cannot produce 1’s with “0” or “00” like “1011011”

\[(0 \cup 00 \cup \varepsilon) (01 \cup 001 \cup 1)^* 111 (0 \cup 00 \cup \varepsilon) (01 \cup 001 \cup 1)^*\] ⚠ Generates “000” like “00 01 111”

\[(01 \cup 001 \cup 1)^* (0 \cup 00 \cup \varepsilon) 111 (01 \cup 001 \cup 1)^* (0 \cup 00 \cup \varepsilon)\] ✅ all binary strings with “111” and without “000”
Problem 1 – Regular Expressions

d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.
Problem 1 – Regular Expressions

d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

Step 1: Write out basic and more intricate cases
d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

**Step 1: Write out basic and more intricate cases**

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>ε</td>
<td>00</td>
</tr>
<tr>
<td>1</td>
<td>11</td>
</tr>
<tr>
<td>10101</td>
<td>101011</td>
</tr>
<tr>
<td>0101</td>
<td>0100</td>
</tr>
</tbody>
</table>
Problem 1 – Regular Expressions

d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

Step 1: Write out basic and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>ε</td>
<td>00</td>
</tr>
<tr>
<td>1</td>
<td>11</td>
</tr>
<tr>
<td>10101</td>
<td>101011</td>
</tr>
<tr>
<td>0101</td>
<td>0100</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!
Problem 1 – Regular Expressions

d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

Step 1: Write out basic and more intricate cases

<table>
<thead>
<tr>
<th>Accepted Strings</th>
<th>Rejected Strings</th>
</tr>
</thead>
<tbody>
<tr>
<td>ε</td>
<td>00</td>
</tr>
<tr>
<td>1</td>
<td>11</td>
</tr>
<tr>
<td>10101</td>
<td>101011</td>
</tr>
<tr>
<td>0101</td>
<td>0100</td>
</tr>
</tbody>
</table>

Step 2: Find a pattern!

Strings can be generated from either a series of “01” or “10” substrings

(1) Using the “01” substring, one additional 0 can be added

(1) Using the “10” substring, one additional 1 can be added
Problem 1 – Regular Expressions

d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

Step 3: Write out the expression with the two cases we found
d) Write a regular expression that matches all binary strings that do not have any consecutive 0’s or 1’s.

Step 3: Write out the expression with the two cases we found

\(((01)^* (0 \cup \epsilon)) \cup ((10)^* (1 \cup \epsilon))\)
Problem 1 – Regular Expressions

e) Write a regular expression that matches all binary strings of the form $1^k y$, where $k \geq 1$ and $y \in \{0,1\}^*$ has at least $k$ 1’s.
Problem 1 – Regular Expressions

e) Write a regular expression that matches all binary strings of the form $1^k y$, where $k \geq 1$ and $y \in \{0,1\}^*$ has at least $k$ 1’s.

$$1(0 \cup 1)^* 1(0 \cup 1)^*$$

Explanation: While it may seem like we need to keep track of how many 1’s there are, it turns out that we don’t. Convince yourself that strings in the language are exactly those of the form $1x$, where $x$ is any binary string with at least one 1. Hence, $x$ is matched by the regular expression $(0 \cup 1)^*1(0 \cup 1)^*$.
Context-Free Grammars
Context-Free Grammars

A context free grammar (CFG) is a finite set of production rules over:

- An alphabet $\Sigma$ of “terminal symbols”
- A finite set $V$ of “nonterminal symbols”
- A start symbol (one of the elements of $V$) usually denoted $S$

A production rule for a nonterminal $A \in V$ takes the form

- $A \rightarrow w_1 \mid w_2 \mid \ldots \mid w_k$

Where each $w_i \in V \cup \Sigma^*$ is a string of nonterminals and terminals.
Problem 2 – CFGs

Write a context-free grammar to match each of these languages.

a) All binary strings that start with 11.

b) All binary strings that contain at most one 1.

c) All strings over 0, 1, 2 with the same number of 1s and 0s and exactly one 2.

Work on this problem with the people around you.
Problem 2 – CFGs

a) All binary strings that start with 11.
Problem 2 – CFGs

a) All binary strings that start with 11.

Thinking back to regular expressions…
Problem 2 – CFGs

a) All binary strings that start with 11.

Thinking back to regular expressions…

11 \((0 \cup 1)^*\)
Problem 2 – CFGs

a) All binary strings that start with 11.

Thinking back to regular expressions…

11 \((0 \cup 1)^*\)

Now generate the CFG…
Problem 2 – CFGs

a) All binary strings that start with 11.

Thinking back to regular expressions…

\[ 11 (0 \cup 1)^* \]

Now generate the CFG…

\[
\begin{align*}
S & \rightarrow 11T \\
T & \rightarrow 1T | 0T | \varepsilon
\end{align*}
\]
Problem 2 – CFGs

b) All binary strings that contain at most one 1.
Problem 2 – CFGs

b) All binary strings that contain at most one 1.

Thinking back to Regular expressions…
Problem 2 – CFGs

b) All binary strings that contain at most one 1.

Thinking back to Regular expressions…

$$0^* (1 \cup \varepsilon) 0^*$$
Problem 2 – CFGs

b) All binary strings that contain at most one 1.

Thinking back to Regular expressions...

$0^* (1 \cup \varepsilon) 0^*$

Now generate the CFG...
b) All binary strings that contain at most one 1.

Thinking back to Regular expressions…

\[ 0^* (1 \cup \varepsilon) 0^* \]

Now generate the CFG…

\[
\begin{align*}
S & \rightarrow ABA \\
A & \rightarrow 0A \mid \varepsilon \\
B & \rightarrow 1 \mid \varepsilon
\end{align*}
\]
Problem 2 – CFGs

b) All binary strings that contain at most one 1.

Thinking back to Regular expressions…

\[ 0^* (1 \cup \epsilon) 0^* \]

Now generate the CFG…

\[
S \rightarrow ABA \\
A \rightarrow 0A \mid \epsilon \\
B \rightarrow 1 \mid \epsilon
\]

 Alternative solution:

\[
S \rightarrow 0S \mid S0 \mid 1 \mid 0 \mid \epsilon
\]
Problem 2 – CFGs

c) All strings over 0, 1, 2 with the same number of 1s and 0s and exactly one 2.
Problem 2 – CFGs

c) All strings over 0, 1, 2 with the same number of 1s and 0s and exactly one 2.

\[ S \rightarrow 01S | 10S | 0S1 | 1S0 | S01 | S10 | 2 \]
Counter example: 001121100

Correct Answer:
\[ S \rightarrow 2T | T2 | ST | TS | 0S1 | 1S0 \]
\[ T \rightarrow TT | 0T1 | 1T0 | \varepsilon \]
That’s All, Folks!

Thanks for coming to section this week! Any questions?
