

## Recursive Definitions of Sets

Q1: What is this set?

**Basis Step:**  $6 \in S, 15 \in S$

**Recursive Step:** If  $x, y \in S$  then  $x + y \in S$

Q2: Write a recursive definition for the set of powers of 3  $\{1, 3, 9, 27, \dots\}$

**Basis Step:**

**Recursive Step:**

## Structural Induction Template

1. Define  $P()$  State that you will show  $P(x)$  holds for all  $x \in S$  and that your proof is by structural induction.

2. Base Case: Show  $P(b)$

[Do that for every  $b$  in the basis step of defining  $S$ ]

3. Inductive Hypothesis: Suppose  $P(x)$

[Do that for every  $x$  listed as already in  $S$  in the recursive rules].

4. Inductive Step: Show  $P()$  holds for the "new elements."

[You will need a separate step for every element created by the recursive rules].

5. Therefore  $P(x)$  holds for all  $x \in S$  by the principle of induction.

# Strings

$\varepsilon$  is "the empty string"

The string with 0 characters – "" in Java (not null!)

$\Sigma^*$ :

Basis:  $\varepsilon \in \Sigma^*$ .

Recursive: If  $w \in \Sigma^*$  and  $a \in \Sigma$  then  $wa \in \Sigma^*$

$wa$  means the string of  $w$  with the character  $a$  appended.

You'll also see  $w \cdot a$  ( $a \cdot$  to mean "concatenate" i.e. + in Java)

Length:

$\text{len}(\varepsilon)=0$ ;

$\text{len}(wa)=\text{len}(w)+1$  for  $w \in \Sigma^*$ ,  $a \in \Sigma$

Reversal:

$\varepsilon^R = \varepsilon$ ;

$(wa)^R = aw^R$  for  $w \in \Sigma^*$ ,  $a \in \Sigma$

Concatenation

$x \cdot \varepsilon = x$  for all  $x \in \Sigma^*$ ;

$x \cdot (wa) = (x \cdot w)a$  for  $w \in \Sigma^*$ ,  $a \in \Sigma$

Number of  $c$ 's in a string

$\#_c(\varepsilon) = 0$

$\#_c(wc) = \#_c(w) + 1$  for  $w \in \Sigma^*$ ;

$\#_c(wa) = \#_c(w)$  for  $w \in \Sigma^*$ ,  $a \in \Sigma \setminus \{c\}$ .

# Binary Trees

Basis: A single node is a rooted binary tree.

Recursive Step: If  $T_1$  and  $T_2$  are rooted binary trees with roots  $r_1$  and  $r_2$ , then a tree rooted at a new node, with children  $r_1, r_2$  is a binary tree.

$\text{size}(\bullet) = 1$

$\text{size}(\text{tree}) =$

$\text{size}(T_1) + \text{size}(T_2) + 1$

$\text{height}(\bullet) = 0$

$\text{height}(\text{tree}) =$

$1 + \max(\text{height}(T_1), \text{height}(T_2))$
