

The set of binary strings with a 1 in the 3rd position from the end (setup)

What do we need to remember?

3 bit shift register “Remember the last three bits”

Nondeterministic Finite Automata Intro

An NFA:

Still has exactly one start state and any number of final states.

The NFA accepts x if there is some path from a start state to a final state labeled with x .

From a state, you can have 0,1, or many outgoing arrows labeled with a single character. You can choose any of them to build the required path.

NFA practice

What is the language of this NFA?
