You work at a carnival and offer a simple game for children to play. The children get to choose a ticket from a bucket and based on the color of the ticket they will get different prizes. There are five colors of tickets: red, blue, green, and yellow which there are 24 of each, and gold which there are 4 of for a total of 100 tickets. Every day, 40 kids come to play the game. What is the probability that 9 of each of the red, blue, green, and yellow tickets and all 4 gold tickets are chosen on a given day if:

a. Your boss is present, so you have to make the game fair and replace each ticket after it is chosen?

b. Your boss isn’t around, so you are lazy don’t replace the tickets after each draw?
