CSE 312 Section 5

More Random Variable and Discrete Zoo

Administrivia

Announcements & Reminders

- HW3
 - Grades released on gradescope check your submission to read comments
 - Regrade requests open ~24 hours after grades are released and close after a week
- HW4
 - Written was due tomorrow, Friday 2/7 @ 11:59pm
 - Late deadline Sunday 2/9 @ 11:59pm
- HW5
 - Will be released on the course website today
 - Due Friday 2/14 @ 11:59pm
 - Late deadline Sunday 2/16 @ 11:59pm

Review & Questions

Any lingering questions from this last week?

Each week in section, we'll be reviewing the main concepts from this week and putting them into action by going through some practice problems together. But before we get into that review, we'll try to start off each section with some time for you to ask questions. Was anything particularly confusing this week? Is there anything we can clarify before we dive into the review? This is your chance to clear things up!

Kahoot for content review! see task 1/2 from section handout

Review of Main Concepts

• **Expectation (expected value, mean, or average):** The expectation of a discrete random variable is defined to be

$$\mathbb{E}[X] = \sum_{x} x \, p_X(x) = \sum_{x} x \, \mathbb{P}(X = x)$$

The expectation of a function of a discrete random variable g(X) is

$$\mathbb{E}[g(X)] = \sum_{x} g(x) \, p_X(x)$$

• Linearity of Expectation: Let X and Y be random variables, and $a, b, c \in \mathbb{R}$. Then, $\mathbb{E}[aX + bY + c] = a\mathbb{E}[X] + b\mathbb{E}[Y] + c$. Also, for any random variables X_1, \dots, X_n ,

$$\mathbb{E}[X_1 + X_2 + \dots + X_n] = \mathbb{E}[X_1] + \mathbb{E}[X_2] + \dots + \mathbb{E}[X_n]$$

Review of Main Concepts

• **Variance:** Let *X* be a random variable and $\mu = E[X]$. The variance of *X* is defined to be

$$Var(X) = \mathbb{E}[(X - \mu)^2]$$

Notice that since this is an expectation of a non-negative random variable $((X - \mu)^2)$, variance is always nonnegative. With some algebra, we can simplify this to

$$Var(X) = \mathbb{E}[X^2] - \mathbb{E}[X]^2$$

- **Standard Deviation:** Let *X* be a random variable. We define the standard deviation of *X* to be the square root of the variance, and denote it $\sigma = \sqrt{Var(X)}$
- **Property of Variance:** Let $a, b \in \mathbb{R}$ and let X be a random variable. Then,

$$Var(aX+b) = a^2 Var(X)$$

Review of Main Concepts

• Independence: Random variables X and Y are independent iff

$$\forall x \forall y, \mathbb{P}(X = x \cap Y = y) = \mathbb{P}(X = x) \mathbb{P}(Y = y)$$

In this case, we have $\mathbb{E}[XY] = \mathbb{E}[X]\mathbb{E}[Y]$ (the converse is not necessarily true).

- **i.i.d. (independent and identically distributed):** Random variables *X*₁, ..., *X*_n are i.i.d. (or iid) iff they are independent and have the same probability mass function.
- Variance of Independent Variables: If X is independent of Y, Var(X + Y) = Var(X) + Var(Y)

This depends on independence, whereas linearity of expectation always holds. Note that this combined with the above shows that $\forall a, b, c \in \mathbb{R}$ and if X is independent of Y,

$$Var(aX + bY + c) = a^{2}Var(X) + b^{2}Var(Y)$$

Review Questions

Var(A+B) = Var(A) + Var(B)

- True
- False

What is Var(3A+4)?

- 3Var(A) + 4
- 3Var(A)
- 9Var(A)
- Var(A)

E[A+B] = E[A] + E[B]

- True
- False

What is E[3A+4]?

- 3E[A] + 4
- 3E[A]
- 9E[A]
- E[A]

Problem 2 - Pond fishing

Part a

Suppose I am fishing in a pond with B blue fish, R red fish, and G green fish, where B + R + G = N. Each fish is equally likely to be caught. For each of the following scenarios, identify the most appropriate distribution (with parameter(s)):

How many of the next 10 fish I catch are blue, if I catch and release

Bin
$$\left(10, \frac{B}{N}\right)$$

Ber $\left(\frac{B}{N}\right)$
Bin $\left(1, \frac{B}{N}\right)$

Part b

.

.

Suppose I am fishing in a pond with B blue fish, R red fish, and G green fish, where B + R + G = N. Each fish is equally likely to be caught. For each of the following scenarios, identify the most appropriate distribution (with parameter(s)):

How many fish I had to catch until my first green fish, if I catch and release

$$\mathsf{Ber}\left(\frac{G}{N}\right)$$

$$\mathsf{Bin}\left(1,\frac{G}{N}\right)$$

Part c

.

.

Suppose I am fishing in a pond with B blue fish, R red fish, and G green fish, where B + R + G = N. Each fish is equally likely to be caught. For each of the following scenarios, identify the most appropriate distribution (with parameter(s)):

How many red fish I catch in the next five minutes, if I catch on average r red fish per minute

 $\mathsf{Poi}(5R)$

$$\mathsf{Bin}\left(5, \frac{R}{N}\right)$$

 $\mathsf{Poi}(5r)$

Part d

Suppose I am fishing in a pond with B blue fish, R red fish, and G green fish, where B + R + G = N. Each fish is equally likely to be caught. For each of the following scenarios, identify the most appropriate distribution (with parameter(s)):

Whether or not my next fish is blue

 $\mathsf{Poi}(5B)$

$$\mathsf{Bin}\left(1,\frac{R}{N}\right)$$

$$\operatorname{Ber}\left(\frac{B}{N}\right)$$

Problem 3 - Balls and Bins

Problem 3 - Balls and Bins

Let X be the number of bins that remain empty when m balls are distributed into n bins randomly and independently. For each ball, each bin has an equal probability of being chosen. (Notice that two bins being empty are not independent events: if one bin is empty, that decreases the probability that the second bin will also be empty. This is particularly obvious when n = 2 and m > 0.) Find $\mathbb{E}[X]$.

Let the random variable X be the sum of two independent rolls of a fair 3-sided die. (If you are having trouble imagining what that looks like, you can use a 6-sided die and change the numbers on 3 of its faces.)

- (a) What is the PMF of X?
- (b) Find E[X].
- (c) Find Var(X).

Let the random variable X be the sum of two independent rolls of a fair 3-sided die. (If you are having trouble imagining what that looks like, you can use a 6-sided die and change the numbers on 3 of its faces.)

(a) What is the PMF of X?

Let the random variable X be the sum of two independent rolls of a fair 3-sided die. (If you are having trouble imagining what that looks like, you can use a 6-sided die and change the numbers on 3 of its faces.)

(b) Find E[X].

Let the random variable X be the sum of two independent rolls of a fair 3-sided die. (If you are having trouble imagining what that looks like, you can use a 6-sided die and change the numbers on 3 of its faces.)

(b) Find Var[X].

Problem 10 - Poisson Practice

Problem 10 – Poisson Practice

Seattle averages 3 days with snowfall per year. Suppose the number of days with snowfall follows a Poisson distribution.

- a) What is the probability of getting exactly 5 days of snow in a year?
- b) According to the Poisson model, what is the probability of getting 367 days of snow?

Problem 10 – Poisson Practice

Seattle averages 3 days with snowfall per year. Suppose the number of days with snowfall follows a Poisson distribution.

a) What is the probability of getting exactly 5 days of snow in a year?

Problem 10 – Poisson Practice

Seattle averages 3 days with snowfall per year. Suppose the number of days with snowfall follows a Poisson distribution.

b) According to the Poisson model, what is the probability of getting 367 days of snow?

•) For any random variable X, we have $E[X^2] \ge E[X]^2$

Let X, Y be random variables. Then, X and Y are independent if and only if
E[XY] = E[X]E[Y]

Let X ~ Binomial(n, p) and Y ~ Binomial(m, p) be independent. Then,
X + Y ~ Binomial(n + m, p)

•) Let $X_1, ..., X_{n+1}$ be independent Bernoulli(*p*) random variables. Then, $E[\sum_{i=1}^n X_i X_{i+1}] = np^2$.

•) Let $X_1, ..., X_{n+1}$ be independent Bernoulli(*p*) random variables. Then, $Y = \sum_{i=1}^{n} X_i X_{i+1} \sim \text{Binomial}(n, p^2).$

•) If $X \sim \text{Bernoulli}(p)$, then $nX \sim \text{Binomial}(n, p)$.

g) If $X \sim \text{Binomial}(n, p)$, then $\frac{X}{n} \sim \text{Bernoulli}(p)$.

•) For any two independent random variables. *X*, *Y*, we have Var(X - Y) = Var(X) - Var(Y).

Problem 5 (Midterm Review)

5 (Midterm Review)

How many integers in $\{1, 2, ..., 360\}$ are divisible by one or more of the numbers 2, 3, and 5?

Problem 3 (Midterm Review)

3 (Midterm Review)

Consider the following inequality: $a_1 + a_2 + a_3 + a_4 + a_5 + a_6 \le 70$. A solution to this inequality over the nonnegative integers is a choice of a nonnegative integer for each of the 6 variables $a_1, a_2, a_3, a_4, a_5, a_6$ that satisfies the inequality. To be different, two solutions have to differ on the value assigned to some a_i . How many different solutions are there to the inequality?

Problem 12 (Midterm Review)

12 (Midterm Review)

You are working on a difficult passage from a new piece you are learning on the piano. You wish to play it correctly 4 times before stopping for the day. If your probability of playing it correctly on each attempt is 2/3, and the attempts are independent (unfortunately!), what is the probability that you have to play it at least 8 times?

Problem 10 (Midterm Review)

10 (Midterm Review)

Suppose you record the birthdays of a large group of people, one at a time, until you have found a person whose birthday matches your own birthday. What is the probability that it takes exactly 20 people for this to occur? Assume that there are 365 possible birthdays and each one is equally probable for a randomly chosen person.

Problem 9 (Midterm review)

9 (Midterm Review)

The space shuttle has 6 O-rings: these were involved in the Challenger disaster. When the space shuttle is launched, each O-ring has a probability of failure of 0.0137, independent of whether other O-rings fail.

(a) What is the probability that, during 23 launches, no O-ring will fail, but that at least one O-ring will fail during the 24th launch?

9 (Midterm Review)

The space shuttle has 6 O-rings: these were involved in the Challenger disaster. When the space shuttle is launched, each O-ring has a probability of failure of 0.0137, independent of whether other O-rings fail.

(b) What is the probability that no O-ring fails during 24 launches?

Problem 7 (Midterm review)

7 (Midterm Review)

You are trying to diagnose the probability that a patient with a positive blood sugar test result has diabetes, even though she is in a low-risk group. The probability of a woman in this group having diabetes is 0.8%. 90% of women with diabetes will test positive in the blood

sugar test. 7% of women without diabetes will test positive in the blood sugar test. Your patient tests positive in the blood sugar test. What is the probability that she has diabetes?

Problem 1 (Midterm review)

- a) If A and B are mutually exclusive, then they are independent.
- b) If *A* and *B* are independent, then they are mutually exclusive.
- c) If $\mathbb{P}(A) = \mathbb{P}(B) = 0.75$, then A and B are mutually exclusive.
- d) If $\mathbb{P}(A) = \mathbb{P}(B) = 0.75$, then A and B are independent.

a) If A and B are mutually exclusive, then they are independent.

b) If *A* and *B* are independent, then they are mutually exclusive.

c) If $\mathbb{P}(A) = \mathbb{P}(B) = 0.75$, then A and B are mutually exclusive.

d) If $\mathbb{P}(A) = \mathbb{P}(B) = 0.75$, then A and B are independent.

Problem 2 (Midterm review)

Given any set of 18 integers, show that one may always choose two of them so that their difference is divisible by 17.

Problem 4 (Midterm Review)

Y●u roll three fair dice, each with a different numbers of faces: die 1 has six faces (numbered 1 ... 6), die 2 has eight faces (numbered 1 ... 8), and die 3 has twelve faces (numbered 1 ... 12). Let the random variable *X* be the sum of the three values rolled. What is $\mathbb{E}[X]$?

That's All, Folks!

Thanks for coming to section this week! Any questions?
