

## Disjoint Union / Find

CSE 326  
Data Structures  
Lecture 14

## Reading

- Reading
  - › Chapter 8

Disjoint Union/Find - Lecture 14

2

## Disjoint Union - Find

- Maintain a set of pairwise disjoint sets.
  - › {3,5,7}, {4,2,8}, {9}, {1,6}
- Each set has a unique name, one of its members
  - › {3,5,7}, {4,2,8}, {9}, {1,6}

Disjoint Union/Find - Lecture 14

3

## Union

- Union(x,y) – take the union of two sets named x and y
  - › {3,5,7}, {4,2,8}, {9}, {1,6}
  - › Union(5,1)
    - {3,5,7,1,6}, {4,2,8}, {9},

Disjoint Union/Find - Lecture 14

4

## Find

- Find(x) – return the name of the set containing x.
  - › {3,5,7,1,6}, {4,2,8}, {9},
  - › Find(1) = 5
  - › Find(4) = 8

Disjoint Union/Find - Lecture 14

5

## Cute Application

- Build a random maze by erasing edges.

Disjoint Union/Find - Lecture 14

6

## Cute Application

- Pick Start and End

Disjoint Union/Find - Lecture 14

7

## Cute Application

- Repeatedly pick random edges to delete.

Disjoint Union/Find - Lecture 14

8

## Desired Properties

- None of the boundary is deleted
- Every cell is reachable from every other cell.
- There are no cycles – no cell can reach itself by a path unless it retraces some part of the path.

Disjoint Union/Find - Lecture 14

9

## A Cycle

Disjoint Union/Find - Lecture 14

10

## A Good Solution

Disjoint Union/Find - Lecture 14

11

## A Hidden Tree

Disjoint Union/Find - Lecture 14

12

## Number the Cells

We have disjoint sets  $S = (\{1\}, \{2\}, \{3\}, \{4\}, \dots, \{36\})$  each cell is unto itself.  
We have all possible edges  $E = (\{1,2\}, \{1,7\}, \{2,8\}, \{2,3\}, \dots)$  60 edges total.

Start	1	2	3	4	5	6
	7	8	9	10	11	12
	13	14	15	16	17	18
	19	20	21	22	23	24
	25	26	27	28	29	30
	31	32	33	34	35	36
	End					

Disjoint Union/Find - Lecture 14

13

## Basic Algorithm

- $S$  = set of sets of connected cells
- $E$  = set of edges
- Maze = set of maze edges initially empty

```

While there is more than one set in S
  pick a random edge (x,y) and remove from E
  u := Find(x);
  v := Find(y);
  if u ≠ v then
    Union(u,v)
  else
    add (x,y) to Maze
All remaining members of E together with Maze form the maze
    
```

Disjoint Union/Find - Lecture 14

14

## Example Step

Pick (8,14)

Start	1	2	3	4	5	6
	7	8	9	10	11	12
	13	14	15	16	17	18
	19	20	21	22	23	24
	25	26	27	28	29	30
	31	32	33	34	35	36
	End					

$S$   
 $\{1,2,8,9,13,19\}$   
 $\{3\}$   
 $\{4\}$   
 $\{5\}$   
 $\{6\}$   
 $\{10\}$   
 $\{11,17\}$   
 $\{12\}$   
 $\{14,20,26,27\}$   
 $\{15,16,21\}$   
 $\{22,23,24,29,30,32\}$   
 $\{33,34,35,36\}$

Disjoint Union/Find - Lecture 14

15

## Example

$S$   
 $\{1,2,8,9,13,19\}$   
 $\{3\}$   
 $\{4\}$   
 $\{5\}$   
 $\{6\}$   
 $\{10\}$   
 $\{11,17\}$   
 $\{12\}$   
 $\{14,20,26,27\}$   
 $\{15,16,21\}$   
 $\{22,23,24,29,30,32\}$   
 $\{33,34,35,36\}$

Find(8) = 7  
 Find(14) = 20  
 Union(7,20)

$S$   
 $\{1,2,8,9,13,19,14,20,26,27\}$   
 $\{3\}$   
 $\{4\}$   
 $\{5\}$   
 $\{6\}$   
 $\{10\}$   
 $\{11,17\}$   
 $\{12\}$   
 $\{15,16,21\}$   
 $\{22,23,24,29,30,32\}$   
 $\{33,34,35,36\}$

Disjoint Union/Find - Lecture 14

16

## Example

Pick (19,20)

Start	1	2	3	4	5	6
	7	8	9	10	11	12
	13	14	15	16	17	18
	19	20	21	22	23	24
	25	26	27	28	29	30
	31	32	33	34	35	36
	End					

$S$   
 $\{1,2,8,9,13,19,14,20,26,27\}$   
 $\{3\}$   
 $\{4\}$   
 $\{5\}$   
 $\{6\}$   
 $\{10\}$   
 $\{11,17\}$   
 $\{12\}$   
 $\{15,16,21\}$   
 $\{22,23,24,29,30,32\}$   
 $\{33,34,35,36\}$

Disjoint Union/Find - Lecture 14

17

## Example at the End

$S$   
 $\{1,2,3,4,5,6,8,9,13,19,14,20,26,27\}$

Start	1	2	3	4	5	6
	7	8	9	10	11	12
	13	14	15	16	17	18
	19	20	21	22	23	24
	25	26	27	28	29	30
	31	32	33	34	35	36
	End					

—  $E$   
 — Maze

Disjoint Union/Find - Lecture 14

18

## Up-Tree for DU/F

Initial state 1 2 3 4 5 6 7

Disjoint Union/Find - Lecture 14

19

## Find Operation

- Find(x) follow x to the root and return the root

Disjoint Union/Find - Lecture 14

20

## Union Operation

- Union(i,j) - assuming i and j roots, point i to j.

Disjoint Union/Find - Lecture 14

21

## Simple Implementation

- Array of indices

	1	2	3	4	5	6	7
up	0	1	0	7	7	5	0

Up[x] = 0 means  
x is a root.

Disjoint Union/Find - Lecture 14

22

## Union

```
Union(up[] : integer array, x,y : integer) : {
  //precondition: x and y are roots//
  Up[x] := y
}
```

Constant Time!

Disjoint Union/Find - Lecture 14

23

## Exercise

- Design Find operator
  - Recursive version
  - Iterative version

```
Find(up[] : integer array, x : integer) : integer {
  //precondition: x is in the range 1 to size//
  ???
}
```

Disjoint Union/Find - Lecture 14

24

## A Bad Case

Disjoint Union/Find - Lecture 14

25

## Weighted Union

### Weighted Union

- Always point the smaller tree to the root of the larger tree

Disjoint Union/Find - Lecture 14

26

## Example Again

Disjoint Union/Find - Lecture 14

27

## Analysis of Weighted Union

- With weighted union an up-tree of height  $h$  has weight at least  $2^h$ .
- Proof by induction
  - Basis:  $h = 0$ . The up-tree has one node,  $2^0 = 1$
  - Inductive step: Assume true for all  $h' < h$ .

Disjoint Union/Find - Lecture 14

28

## Analysis of Weighted Union

- Let  $T$  be an up-tree of weight  $n$  formed by weighted union. Let  $h$  be its height.
- $n \geq 2^h$
- $\log_2 n \geq h$
- Find( $x$ ) in tree  $T$  takes  $O(\log n)$  time.
- Can we do better?

Disjoint Union/Find - Lecture 14

29

## Worst Case for Weighted Union

$n/2$  Weighted Unions

$n/4$  Weighted Unions

Disjoint Union/Find - Lecture 14

30

## Example of Worst Cast (cont')

After  $n-1 = n/2 + n/4 + \dots + 1$  Weighted Unions

If there are  $n = 2^k$  nodes then the longest path from leaf to root has length  $k$ .

Disjoint Union/Find - Lecture 14

31

## Elegant Array Implementation

Disjoint Union/Find - Lecture 14

32

## Weighted Union

```

W-Union(i, j : index) {
  // i and j are roots //
  wi := weight[i];
  wj := weight[j];
  if wi < wj then
    up[i] := j;
    weight[j] := wi + wj;
  else
    up[j] := i;
    weight[i] := wi + wj;
}
    
```

Disjoint Union/Find - Lecture 14

33

## Path Compression

- On a Find operation point all the nodes on the search path directly to the root.

Disjoint Union/Find - Lecture 14

34

## Self-Adjustment Works

Disjoint Union/Find - Lecture 14

35

## Path Compression Find

```

PC-Find(i : index) {
  r := i;
  while up[r] ≠ 0 do //find root//
    r := up[r];
  if i ≠ r then //compress path//
    k := up[i];
    while k ≠ r do
      up[i] := r;
      i := k;
      k := up[k];
  return(r);
}
    
```

Disjoint Union/Find - Lecture 14

36

## Example

Disjoint Union/Find - Lecture 14

37

## Disjoint Union / Find with Weighted Union and PC

- Worst case time complexity for a W-Union is  $O(1)$  and for a PC-Find is  $O(\log n)$ .
- Time complexity for  $m \geq n$  operations on  $n$  elements is  $O(m \log^* n)$  where  $\log^* n$  is a very slow growing function.
  - ›  $\log^* n < 7$  for all reasonable  $n$ . Essentially constant time per operation!
- Using “ranked union” gives an even better bound theoretically.

Disjoint Union/Find - Lecture 14

38

## Amortized Complexity

- For disjoint union / find with weighted union and path compression.
  - › average time per operation is essentially a constant.
  - › worst case time for a PC-Find is  $O(\log n)$ .
- An individual operation can be costly, but over time the average cost per operation is not.

Disjoint Union/Find - Lecture 14

39

## Find Solutions

### Recursive

```
Find(up[] : integer array, x : integer) : integer {  
  //precondition: x is in the range 1 to size//  
  if up[x] = 0 then return x  
  else return Find(up, up[x]);  
}
```

### Iterative

```
Find(up[] : integer array, x : integer) : integer {  
  //precondition: x is in the range 1 to size//  
  while up[x] ≠ 0 do  
    x := up[x];  
  return x;  
}
```
