

CSE 326: Data Structures

Hal Perkins
Spring Quarter 2007
Lecture 1

CSE 326 Crew

- Hal Perkins
- Marius Nita
- Der Sun

4/5/2007

CSE 326 - Introduction

2

CSE 326 Crew

- Hal Perkins
- Marius Nita
- Der Sun

- And *You!*

4/5/2007

CSE 326 - Introduction

3

Today's Outline

- Introductions
- **Administrative Info**
- What is this course about?
- Review: Queues and stacks

4/5/2007

CSE 326 - Introduction

4

Course Information

- **Instructor:** Hal Perkins, CSE 548
perkins@cs.washington.edu
- **Text:** *Data Structures & Algorithm Analysis in Java*, (Mark Allen Weiss), 1999
- **Web page:** <http://www.cs.washington.edu/326>
- **Mailing Lists:**
 - › announcement list: cse326-announce@cs.washington.edu
Subscribe to this using web interface, see homepage
- **Discussion list: link on course home page (Coming soon!)**

4/5/2007

CSE 326 - Introduction

5

Course Mechanics

- **Written homeworks (6-7 total)**
 - › Due at the start of class on due date (typically Friday)
 - › No late homeworks accepted
- **Programming homeworks (3-4 total)**
 - › In Java
 - › Turned in electronically (Wed eve) and on paper
 - › Once per quarter: use your “late day” for extra 24 hours – **Must email TA**
- **Work in teams only on explicit team projects**
 - › Appropriate *discussions* encouraged – see website

4/5/2007

CSE 326 - Introduction

6

Course Mechanics(2)

- **Approximate Grading**
 - 20% - Written Homework Assignments
 - 25% - Programming Assignments
 - 20% - Midterm Exam (in class)
 - 25% - Final Exam
 - 10% - Best of the four items above.

4/5/2007

CSE 326 - Introduction

7

Homework for Today!!

- 1) Sign up for mailing list (immediately)**
- 2) Information Sheet:** bring to lecture on Wednesday, March 30
- 3) Reading in Weiss (see next slide)**

4/5/2007

CSE 326 - Introduction

8

Reading

- Reading in *Data Structures and Algorithm Analysis in Java*, by Weiss
- For this week:
 - › Chapter 1 – (review) Mathematics and Java
 - › Chapter 3 – (Assign #1) Lists, Stacks, & Queues
 - › Chapter 2 – (Topic for Friday) Algorithm Analysis

4/5/2007

CSE 326 - Introduction

9

Bring to Class on Wednesday:

- Name
- Email address
- Year (1,2,3,4)
- Major
- Hometown
- Interesting Fact or what I did over winter/spring break.

4/5/2007

CSE 326 - Introduction

10

Today's Outline

- Introductions
- Administrative Info
- **What is this course about?**
- Review: Queues and stacks

4/5/2007

CSE 326 - Introduction

11

Class Overview

Introduction to many of the basic data structures used in computer software

- › Be exposed to a variety of data structures
- › Know when to use them
- › Practice mathematical techniques for analyzing the algorithms that use them
- › Practice implementing and using them by writing programs

Goal:

be able to make good design choices as a developer, project manager, or system customer

4/5/2007

CSE 326 - Introduction

12

Goals

“I will, in fact, claim that the difference between a bad programmer and a good one is whether he considers his code or his data structures more important. Bad programmers worry about the code. Good programmers worry about data structures and their relationships.”

Linus Torvalds, 2006

4/5/2007

CSE 326 - Introduction

13

Goals

“Show me your flowcharts and conceal your tables, and I shall continue to be mystified. Show me your tables, and I won't usually need your flowcharts; they'll be obvious.”

Fred Brooks, 1975

4/5/2007

CSE 326 - Introduction

14

Data Structures

“**Clever**” ways to organize information in order to enable **efficient** computation

- › What do we mean by clever?
- › What do we mean by efficient?

4/5/2007

CSE 326 - Introduction

15

Picking the best Data Structure for the job

- The data structure you pick needs to *support* the operations you need
- Ideally it supports the operations you will use most often in an *efficient* manner
- Examples of operations:
 - › List ADT with operations **insert** and **delete**
 - › Stack ADT with operations **push** and **pop**

4/5/2007

CSE 326 - Introduction

16

Terminology

- Abstract Data Type (ADT)
 - › Mathematical description of an object with set of operations on the object. Useful building block.
- Algorithm
 - › A high level, language independent, description of a step-by-step process
- Data structure
 - › A specific family of algorithms for implementing an abstract data type.
- Implementation of data structure
 - › A specific implementation in a specific language

4/5/2007

CSE 326 - Introduction

17

Terminology examples

- A stack is an *abstract data type* supporting push, pop and isEmpty operations
- A stack *data structure* could use an array, a linked list, or anything that can hold data
- One stack *implementation* is java.util.Stack; another is java.util.LinkedList

4/5/2007

CSE 326 - Introduction

18

Concepts vs. Mechanisms

- | | |
|---|---|
| • Abstract | • Concrete |
| • Pseudocode | • Specific programming language |
| • Algorithm <ul style="list-style-type: none">› A sequence of high-level, language independent operations, which may act upon an abstracted view of data. | • Program <ul style="list-style-type: none">› A sequence of operations in a specific programming language, which may act upon real data in the form of numbers, images, sound, etc. |
| • Abstract Data Type (ADT) <ul style="list-style-type: none">› A mathematical description of an object and the set of operations on the object. | • Data structure <ul style="list-style-type: none">› A specific way in which a program's data is represented, which reflects the programmer's design choices/goals. |

4/5/2007

CSE 326 - Introduction

19

Why So Many Data Structures?

Ideal data structure:

“fast”, “elegant”, memory efficient

Generates tensions:

- › time vs. space
- › performance vs. elegance
- › generality vs. simplicity
- › one operation's performance vs. another's

The study of data structures is the study of tradeoffs. That's why we have so many of them!

4/5/2007

CSE 326 - Introduction

20

Today's Outline

- Introductions
- Administrative Info
- What is this course about?
- **Review: Queues and stacks**

4/5/2007

CSE 326 - Introduction

21

First Example: Queue ADT

- Queue operations
 - create
 - destroy
 - enqueue
 - dequeue
 - is_empty

4/5/2007

CSE 326 - Introduction

22

Circular Array Queue Data Structure

```
enqueue(Object x) {
    Q[back] = x ;
    back = (back + 1) % size
}
```

How test for empty list?

How to find K-th element in the queue?

```
dequeue() {
    x = Q[front] ;
    front = (front + 1) % size;
    return x ;
}
```

What is complexity of these operations?

Limitations of this structure?

4/5/2007

CSE 326 - Introduction

23

Linked List Queue Data Structure

```
void enqueue(Object x) {
    if (is_empty())
        front = back = new Node(x)
    else
        back->next = new Node(x)
        back = back->next
}

Object dequeue() {
    assert(!is_empty)
    return_data = front->data
    temp = front
    front = front->next
    delete temp
    return return_data
}

bool is_empty() {
    return front == null
}
```

4/5/2007

CSE 326 - Introduction

24

Circular Array vs. Linked List

4/5/2007

CSE 326 - Introduction

25

Second Example: Stack ADT

- Stack operations

- › create
- › destroy
- › push
- › pop
- › top
- › is_empty

4/5/2007

CSE 326 - Introduction

26

Stacks in Practice

- Function call stack
- Removing recursion
- Balancing symbols (parentheses)
- Evaluating Reverse Polish Notation

4/5/2007

CSE 326 - Introduction

27

Homework for Today!!

- 1) Sign up for mailing list (immediately)**
- 2) Information Sheet:** bring to lecture on Wednesday
- 3) Reading** in Weiss

4/5/2007

CSE 326 - Introduction

28
