

Sorting

Chapter 7 in Weiss

2/16/2007

1

Today's Outline

- Announcements
- **Sorting**

2/16/2007

2

Announcements

- Homework #5 – due NOW
- Project #3 –
 - Partner Selection due Tonight
- No Class on Monday Feb 19
- Reading:
 - Today & Wednesday: Sorting (Chapter #7)
 - Next: Graphs (Chapter #9)

3

Sorting

Chapter 7 in Weiss

2/16/2007

4

Why Sort?

2/16/2007

5

Sorting: *The Big Picture*

Problem: Given n comparable elements in an array, sort them in an increasing (or decreasing) order.

... 2/16/2007

6

Insertion Sort: Idea

- At the k^{th} step, put the k^{th} input element in the correct place among the first k elements
- **Result:** After the k^{th} step, the first k elements are sorted.

Runtime:

worst case :
best case :
average case :

2/16/2007

7

Selection Sort: Idea

- Find **the** smallest element, put it 1st
- Find **the** next smallest element, put it 2nd
- Find **the** next smallest, put it 3rd
- And so on ...

2/16/2007

8

Student Activity

```
Mystery(int array a[]) {
  for (int p = 1; p < length; p++) {
    int tmp = a[p];
    for (int j = p; j > 0 && tmp < a[j-1]; j--)
      a[j] = a[j-1];
    a[j] = tmp;
  }
}
```

What sort is this?

What is its
running time?
Best?
Avg?
Worst?

2/16/2007

9

Selection Sort: Code

```
void SelectionSort (Array a[0..n-1]) {
  for (i=0, i<n; ++i) {
    j = Find index of smallest entry in a[i..n-1]
    Swap(a[i],a[j])
  }
}
```

Runtime:

worst case :
best case :
average case :

2/16/2007

10

Student Activity

Sorts using other data structures:

- | | | |
|---------------|------|----------|
| | How? | Runtime? |
| • AVL Sort? | | |
| • Heap Sort? | | |
| • Splay Sort? | | |

2/16/2007

11

HeapSort: Using Priority Queue ADT (heap)

Shove all elements into a priority queue,
take them out smallest to largest.

Runtime:

2/16/2007

12

AVL Sort

Runtime:

Would the simpler “Splay sort” take any longer than this?

2/16/2007

13

Merge Sort?

2/16/2007

14

Merge Sort

MergeSort (Array [1..n])
 1. Split Array in half
 2. Recursively sort each half
 3. Merge two halves together

“The 2-pointer method”

```

Merge (a1[1..n], a2[1..n])
i1=1, i2=1
while (i1<n, i2<n) {
  if (a1[i1] < a2[i2]) {
    Next is a1[i1]
    i1++
  } else {
    Next is a2[i2]
    i2++
  }
}
Now throw in the dregs...
    
```

2/16/2007

15

Merge Sort: Complexity

2/16/2007

16

Quick Sort

1. Pick a “pivot”
2. Divide into less-than & greater-than pivot
3. Sort each side recursively

2/16/2007

17

The steps of QuickSort

2/16/2007

18

QuickSort Example

- Choose the pivot as the median of three.
- Place the pivot and the largest at the right and the smallest at the left

2/16/2007

19

QuickSort Example

- Move i to the right to be larger than pivot.
- Move j to the left to be smaller than pivot.
- Swap

2/16/2007

20

QuickSort Example

2/16/2007

21

Recursive Quicksort

```

Quicksort(A[]: integer array, left, right : integer): {
  pivotindex : integer;
  if left + CUTOFF ≤ right then
    pivot := median3(A, left, right);
    pivotindex := Partition(A, left, right-1, pivot);
    Quicksort(A, left, pivotindex - 1);
    Quicksort(A, pivotindex + 1, right);
  else
    Insertionsort(A, left, right);
}
    
```

Don't use quicksort for small arrays.
CUTOFF = 10 is reasonable.

2/16/2007

22

Student Activity

Recurrence Relations

Write the recurrence relation for QuickSort:

- Best Case:
- Worst Case:

2/16/2007

23

QuickSort: Best case complexity

2/16/2007

24

QuickSort:
Worst case complexity

2/16/2007

25

QuickSort:
Average case complexity

Turns out to be $O(n \log n)$

See Section 7.7.5 for an idea of the proof.

Don't need to know proof details for this course.
