CSE 326: Data Structures
Winter 1998
Course Information

Instructor:	Martin Tompa	Sieg 426B	tompa@cs.washington.edu	543-9263
TA:	Matthew Richardson	Sieg 326	mattr@cs.washington.edu	

Office hours: Will be announced shortly.

Prerequisites: CSE 143, CSE 321.

Grading: Homework (40%), Midterm (20%), Final (40%). Percentages are approximate. The final exam is scheduled for Monday, March 16, 1998, 2:30-4:20 p.m.

Computing facilities: Sieg 329 Unix lab. Programming assignments will be done in C++.

Course Web: All handouts and a log of all mail sent to the class mailing list will also be available on the course web at the following URL:

`http://www.cs.washington.edu/education/courses/326/CurrentQtr/`

Mailing List: The class mailing list is `cse326@cs.washington.edu`. Instructions for subscribing to the class mailing list can be found on the course web.

We will use this list for announcements of general interest to the class. Students should also feel free to use it to ask questions, post information, or initiate discussions of general interest to the class. Questions or comments that are not of general interest should instead be directed to the TA or instructor at the addresses above.

Textbook: Harry Lewis and Larry Denenberg, *Data Structures & Their Algorithms*, Harper-Collins, 1991.

Reading assignment: Pages 1–25, by next lecture. The sections on "Notation for Programs", "Locatives", "Abstract Data Types", and "Order Notation" are particularly central to this course.

If you would like to request academic accomodations due to a disability, please contact Disabled Student Services, 448 Schmitz, 543–8924 (V/TDD). If you already have a letter from Disabled Student Services indicating you have a disability that requires academic accomodations, please let the instructor know so we can discuss the appropriate accomodations.
