

HW 2.5 Formal Spec

Section HW, due late Sunday, Jan 20. Project directory must be checked in to your repository by 11 pm.

1) **Download the zipped HelloPikachu project** linked on the website under section 2 and import it into eclipse.

(You may need to install eclipse)

2) Run the PokemonTest.java JUnit test and **solve the typos in the code.**

(You may need to link to the JUnit library. See the message board.)

3) **Complete the specification for Pokemon.battle().**

(Generating javadoc is too nuanced. I've dropped that requirement.)

4) **Commit the entire project directory to your cse331 repository.**

(You may need to install subversion. See instructions under section 2 on the website.)

(Note: It should take you under an hour to install everything and get setup. The actual work (fix code, fix spec, commit everything) should take 5-10 minutes.)
