CSE 331 Software Design & Implementation

Dan Grossman Autumn 2019 Course Wrapup

- Reminder: Fill out your course evaluations (!)
- Final exam information
- A look back at CSE 331
 - High-level overview of main ideas and goals
 - Connection to homeworks
 - Context
- Also:
 - Thank-yous
- Project demos
- Maybe: "Ask Dan Anything"

Final exam information

- Monday, 8:30-10:20, here
- Comprehensive but biased towards the 2nd half of the course
- Old exams on the web
 - Some questions won't apply if we didn't do similar things this quarter; also React/JS is pretty new
- See email for more information and review-session information

What was it all about?

But first....

UW CSE 331 Autumn 2019

Huge thanks to the folks who made it work

Course staff: Ten Amazing TAs

This course is itself a sophisticated (or at least really, really complicated) system requiring savvy design and implementation

And a big thanks to you for all you've done!

4 slides from Lecture 1...

What is the goal of CSE 331?

How to build harder-to-build software

• Move from CSE 143 problems toward what you'll see in upperlevel CSE courses and in industry

Specifically, how to write code of

- Higher quality
- Increased complexity

We will discuss tools and techniques to help with this

- There are *timeless principles* to both

What is high quality code?

In summary, we want our code to be:

- 1. Correct
- 2. Easy to change
- 3. Easy to understand
- 4. Easy to scale (modular)

These qualities also allow for increased complexity

What we will cover in CSE 331

- Everything we cover relates to the 4 goals
- We'll use Java but the principles apply in any setting

Correctness

- 1. Tools
 - Git, IntelliJ, JUnit, Javadoc, ...
 - Java libraries: equality & hashing
 - Adv. Java: generics, assertions, ...
 - debugging
- 2. Inspection
 - reasoning about code
 - specifications
- 3. Testing
 - test design
 - coverage

Changeability

- specifications, ADTs
- listeners & callbacks

Understandability

- specifications, ADTs
- Adv. Java: exceptions
- subtypes

Modularity

- module design & design patterns
- event-driven programming, MVC, GUIs

Back to Goals

- CSE 331 will teach you to how to write correct programs
- What does it mean for a program to be correct?
 - Specifications
- What are ways to achieve correctness?
 - Principled design and development
 - Abstraction and modularity
 - Documentation
- What are ways to verify correctness?
 - Testing
 - Reasoning and verification

Some new slides to tie the pieces together...

Divide and conquer: Modularity, abstraction, specs

No one person can understand all of a realistic system

- Modularity permits focusing on just one part
- Abstraction enables ignoring detail
- Specifications (and documentation) formally describe behavior
- Reasoning relies on all three to understand/fix errors
 - Or avoid them in the first place
 - Proving, testing, debugging: all are intellectually challenging

How CSE 331 fits together

- Lectures: ideas
- Specifications
- Testing
- Subtyping
- Equality & identity
- Generics
- Design patterns

 \Rightarrow Assignments: get practice

- \Rightarrow Design classes
- \Rightarrow Write tests
- \Rightarrow Write subclasses
- \Rightarrow Override equals, use collections
- \Rightarrow Write generic classes
- \Rightarrow Larger designs; MVC
- Reasoning, debugging \Rightarrow Correctness, testing
- **Events** \Rightarrow GUIs
- Systems integration \Rightarrow N/A

What you have learned in CSE 331

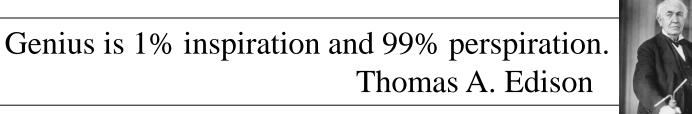

Compare your skills today to 10 weeks ago

- Theory: abstraction, specification, design
- Practice: implementation, testing
- Theory & practice: correctness

Bottom line aspiration: Much of what we've done would be *easy* for you today

This is a measure of how much you have learned

There is no such thing as a "born" programmer!

UW CSE 331 Autumn 2019

What you will learn later

- Your next project can be much more ambitious
 - But beware of "second system" effect
- Know your limits
 - Be humble (reality helps you with this)
- You will continue to learn
 - Building interesting systems is never easy
 - Like any worthwhile endeavor
 - Practice is a good teacher
 - Requires thoughtful introspection
 - Don't learn *only* by trial and error!
 - Voraciously consume ideas and tools

What comes next?

Courses

- CSE 403 Software Engineering
 - Focuses more on requirements, software lifecycle, teamwork
- Capstone projects
- Any class that requires software design and implementation

Research

- In software engineering & programming systems
- In any topic that involves software

Having an impact on the world

- Jobs (and job interviews)
- Larger programming projects

Last slide

- System building is fun!
 - It's even more fun when you're successful!!
- Pay attention to what matters
 - Take advantage of the techniques and tools you've learned (and will learn!)
- On a personal note:
 - Don't be a stranger: I love to hear how you do in CSE and beyond as alumni
 - Students are amazing; I believe in you! ③
- Closing thoughts?
