Consider the following code that contains two ADTs: a mutable 2-D Point class and a PointSet class which is essentially identical to the CharSet class used as an example in lecture. There is also a Main class with a main method that creates instances of these classes and calls some of their methods. Answer questions about this code on the following page.

```
/** 2-d (x,y) mutable point on the plane */
class Point {
 private int x, y;
 public Point(int x, int y) {
   this.x = x; this.y = y;
 1
 public void setX(int x) { this.x = x; }
 public void setY(int y) { this.y = y; }
}
/** Set of 2-D Points */
class PointSet {
 // RI: elts has no nulls and no duplicates
 private List<Point> elts;
 public PointSet() { elts = new ArrayList<Point>(); }
 /** add a point to this */
 public void add(Point p) {
   // ... check for duplicates omitted
   elts.add(p);
  }
 // Three methods that return a list of the set elements
 public List<Point> getElts1() { return elts; }
 public List<Point> getElts2() { return new ArrayList<Point>(elts); }
 public List<Point> getElts3() {
   return Collections.unmodifiableList(elts);
  }
}
class Main {
 public static void main(String[] args) {
   PointSet ps = new PointSet();
   ps.add(new Point(1,2));
   ps.add(new Point(17,42));
   List<Point> e1 = ps.getElts1();
   List<Point> e2 = ps.getElts2();
   List<Point> e3 = ps.getElts3();
   // draw a diagram of memory when execution reaches here
 }
}
```

1. (CSE 143 review) Draw a diagram of memory showing all the variables and objects that exist at the end of method main when it is executed. Be sure you clearly show the distinction between local variables in main and Java objects referenced by those variables and by other objects. The results of the first two assignments, which create a PointSet and add a Point to it, are given below to help you get started. Add to this diagram to show the effect of the rest of the code.

2. Do any of the three implementations of method getElts (getElts1, getElts2, getElts3) have potential representation exposure problems? If so, explain which method(s) have the problem and why. (Briefly)
