Lecture 3 – Reasoning about Loops

Reasoning So Far

- “Turn the crank” reasoning for assignment and if statements
- All code (essentially) can be written just using:
 - assignments
 - if statements
 - loops
- Only part we are missing is **loops**

Reasoning About Loops

- Loop reasoning is not as easy as with “=” and “if”
 - recall Rice’s Theorem (from 311): checking any non-trivial semantic property about programs is **undecidable**
- We need help (more information) before the reasoning again becomes a turn-the-crank process
- That help comes in the form of a “loop invariant”

Loop Invariant

A **loop invariant** is an assertion that holds at the top of the loop:

```
 {{ Inv: I }}  
while (cond)  
    S
```

- It holds when we **first get to** the loop.
- It holds each time we execute *S* and **come back** to the top.

Notation: I'll use “**Inv:**” to indicate a loop invariant.

Checking Correctness of a Loop

Consider a while-loop (other loop forms not too different) with a loop invariant \mathbf{I} .

Let's try forward reasoning...

$\{\{ P \}\}$

S1

$\{\{ \text{Inv: } I \}\}$

while (cond)

S2

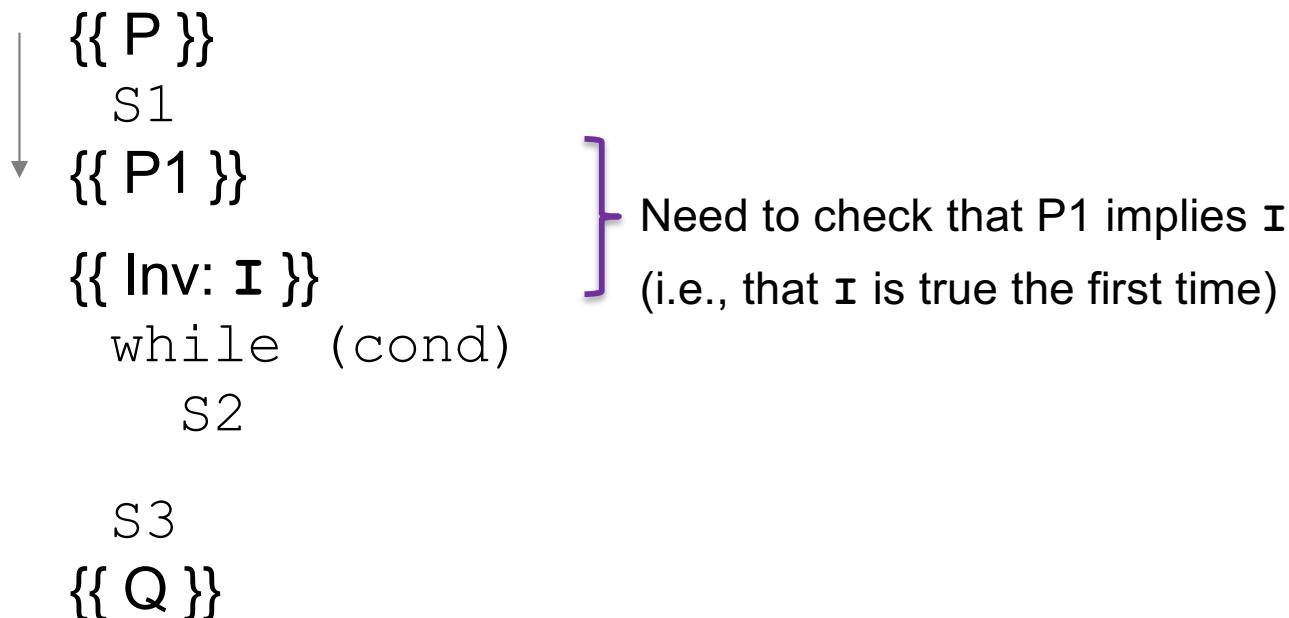

S3

$\{\{ Q \}\}$

Checking Correctness of a Loop

Consider a while-loop (other loop forms not too different) with a loop invariant \mathbf{I} .

Let's try forward reasoning...

Checking Correctness of a Loop

Consider a while-loop (other loop forms not too different) with a loop invariant \mathbf{I} .

Let's try forward reasoning...

$\{\{ P \}\}$

S1

$\{\{ \text{Inv: } I \} \}$

while (cond)

$\{\{ I \text{ and cond } \} \}$

S2

$\{\{ P_2 \} \}$

S3

$\{\{ Q \} \}$

}

Need to check that P_2 implies I again
(i.e., that I is true each time around)

Checking Correctness of a Loop

Consider a while-loop (other loop forms not too different) with a loop invariant \mathbf{I} .

Let's try forward reasoning...

$\{\{ P \}\}$

S1

$\{\{ \text{Inv: } I \}\}$

while (cond)

S2

$\{\{ I \text{ and not cond} \}\}$

S3

$\{\{ P_3 \}\}$

$\{\{ Q \}\}$

]

Need to check that P_3 implies Q
(i.e., Q holds after the loop)

Checking Correctness of a Loop

Consider a while-loop (other loop forms not too different) with a loop invariant I .

$\{\{ P \}\}$

S1

$\{\{ \text{Inv: } I \}\}$

while (cond)

S2

S3

$\{\{ Q \}\}$

Informally, we need:

- I holds initially
- I holds each time around
- Q holds after we exit

Formally, we need validity of:

- $\{\{ P \}\} S1 \{\{ I \}\}$
- $\{\{ I \text{ and cond } \}\} S2 \{\{ I \}\}$
- $\{\{ I \text{ and not cond } \}\} S3 \{\{ Q \}\}$

(can check these with backward reasoning instead)

More on Loop Invariants

- Loop invariants are crucial information
 - needs to be provided before reasoning is “turn the crank”
- Pro Tip: always document your invariants for non-trivial loops
 - don’t make code reviewers guess the invariant
- Pro Tip: with a good loop invariant, the code is easy to write
 - all the creativity can be saved for finding the invariant

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{{ b.length >= n }}  
s = 0;  
i = 0;  
while (i != n) {  
    s = s + b[i];  
    i = i + 1;  
}  
{{ s = b[0] + ... + b[n-1] }}
```

Equivalent to this “for” loop:

```
s = 0;  
for (int i = 0; i != n; i++)  
    s = s + b[i];
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{{ b.length >= n }}  
s = 0;  
i = 0;  
{{ Inv: s = b[0] + ... + b[i-1] }}  
while (i != n) {  
    s = s + b[i];  
    i = i + 1;  
}  
{{ s = b[0] + ... + b[n-1] }}
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }  
| s = 0;  
| i = 0;  
↓ { $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    s = s + b[i];  
    i = i + 1;  
}  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }  
s = 0;  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    s = s + b[i];  
    i = i + 1;  
}  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

- ($s = 0$ and $i = 0$) implies
 $s = b[0] + \dots + b[i-1] ?$

Yes. (An empty sum is zero.)

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }          • ( $s = 0$  and  $i = 0$ ) implies I  
s = 0;  
i = 0;  
{ $\{ s = 0$  and  $i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    s = s + b[i];  
    i = i + 1;  
}  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }                                • ( $s = 0$  and  $i = 0$ ) implies  $I$ 
s = 0;                                              •  $\{ \{ I \text{ and } i \neq n \} \} \subseteq \{ \{ I \} \}$  ?
i = 0;
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }
while (i != n) {
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ } ]
    s = s + b[i];
    i = i + 1;
    { $\{ s = b[0] + \dots + b[i-1] \}$ }
}
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }                                • ( $s = 0$  and  $i = 0$ ) implies  $I$ 
s = 0;                                              •  $\{ \{ I \text{ and } i \neq n \} \} \subseteq \{ \{ I \} \}$  ?
i = 0;
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }
while (i != n) {
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ } ↑
    s = s + b[i];
    i = i + 1;
    { $\{ s = b[0] + \dots + b[i-1] \}$ }
}
{ $\{ s = b[0] + \dots + b[n-1] \}$ }                  { $\{ s + b[i] = b[0] + \dots + b[i] \}$ }
                                                { $\{ s = b[0] + \dots + b[i] \}$ }
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }                                • ( $s = 0$  and  $i = 0$ ) implies  $I$ 
    s = 0;                                         •  $\{ \{ I \text{ and } i \neq n \} \} \subseteq \{ \{ I \} \}$ 
    i = 0;
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }      •  $\{ \{ I \text{ and not } (i \neq n) \} \}$  implies
while (i != n) {                                      $s = b[0] + \dots + b[n-1] ?$ 
    s = s + b[i];
    i = i + 1;
}
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ } ]
{ $\{ s = b[0] + \dots + b[n-1] \}$ } ]
```

Example: sum of array

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ b.length \geq n \}$ }  
s = 0;  
i = 0;  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    s = s + b[i];  
    i = i + 1;  
}  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

- ($s = 0$ and $i = 0$) implies I
- $\{ \{ I \text{ and } i \neq n \} \} \leq \{ \{ I \} \}$
- $\{ \{ I \text{ and } i = n \} \}$ implies Q

These three checks verify
the postcondition holds
(i.e., the code is correct)

Termination

- Technically, this analysis does not check that the code **terminates**
 - it shows that the postcondition holds if the loop exits
 - but we never showed that the loop actually exits
- However, that follows from an analysis of the running time
 - e.g., if the code runs in $O(n^2)$ time, then it terminates
 - an infinite loop would be $O(\infty)$
 - any finite bound on the running time proves it terminates
- It is normal to also analyze the running time of code we write, so we get termination already from that analysis.

Reasoning So Far

- Forward and backward reasoning for...
 - assignments
 - if statements
 - loops
- (essentially) all code can be rewritten to use just these

Example HW problem

The following code to compute $b[0] + \dots + b[n-1]$:

```
 {{ }}  
 s = 0;  
 {{ _____ }}  
 i = 0;  
 {{ _____ }}  
 {{ Inv: s = b[0] + ... + b[i-1] }}  
 while (i != n) {  
   {{ _____ }}  
   s = s + b[i];  
   {{ _____ }}  
   i = i + 1;  
   {{ _____ }}  
 }  
 {{ _____ }}  
 {{ s = b[0] + ... + b[n-1] }}
```

Example HW problem

The following code to compute $b[0] + \dots + b[n-1]$:

```
{}  
s = 0;  
{ s = 0 }  
i = 0;  
{ s = 0 and i = 0 }  
{ Inv: s = b[0] + ... + b[i-1] }  
while (i != n) {  
    { s = b[0] + ... + b[i-1] and i != n }  
    s = s + b[i];  
    { s = b[0] + ... + b[i-1] + b[i] and i != n }  
    i = i + 1;  
    { s = b[0] + ... + b[i-2] + b[i-1] and i-1 != n }  
}  
{ s = b[0] + ... + b[i-1] and not (i != n ) }  
{ s = b[0] + ... + b[n-1] }
```

Are we done?

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ \}$ }  
s = 0;  
{ $\{ s = 0 \}$ }  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ }  
    s = s + b[i];  
    { $\{ s = b[0] + \dots + b[i-1] + b[i] \text{ and } i \neq n \}$ }  
    i = i + 1;  
    { $\{ s = b[0] + \dots + b[i-2] + b[i-1] \text{ and } i-1 \neq n \}$ }  
}  
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ }  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Are we done?
No, need to also check...

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ \}$ }  
s = 0;  
{ $\{ s = 0 \}$ }  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ }  
    s = s + b[i];  
    { $\{ s = b[0] + \dots + b[i-1] + b[i] \text{ and } i \neq n \}$ }  
    i = i + 1;  
    { $\{ s = b[0] + \dots + b[i-2] + b[i-1] \text{ and } i-1 \neq n \}$ }  
}  
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ }  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Are we done?
No, need to also check...

Holds initially? Yes: $i = 0$ implies $s = b[0] + \dots + b[-1] = 0$

$i = 3: s = b[0] + b[1] + b[2]$
 $i = 2: s = b[0] + b[1]$
 $i = 1: s = b[0]$
 $i = 0: s = 0$

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ \}$ }  
s = 0;  
{ $\{ s = 0 \}$ }  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ }  
    s = s + b[i];  
    { $\{ s = b[0] + \dots + b[i-1] + b[i] \text{ and } i \neq n \}$ }  
    i = i + 1;  
    { $\{ s = b[0] + \dots + b[i-2] + b[i-1] \text{ and } i-1 \neq n \}$ }  
}  
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ }  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Are we done?
No, need to also check...

Does postcondition hold on termination?

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{}  
s = 0;  
{ s = 0 }  
i = 0;  
{ s = 0 and i = 0 }  
{ Inv: s = b[0] + ... + b[i-1] }  
while (i != n) {  
    { s = b[0] + ... + b[i-1] and i != n }  
    s = s + b[i];  
    { s = b[0] + ... + b[i-1] + b[i] and i != n }  
    i = i + 1;  
    { s = b[0] + ... + b[i-2] + b[i-1] and i-1 != n }  
}  
{ s = b[0] + ... + b[i-1] and not (i != n) }]  
{ s = b[0] + ... + b[n-1] }
```

Are we done?
No, need to also check...

Postcondition holds? Yes, since $i = n$.

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{ \}$ }  
s = 0;  
{ $\{ s = 0 \}$ }  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ }  
    s = s + b[i];  
    { $\{ s = b[0] + \dots + b[i-1] + b[i] \text{ and } i \neq n \}$ }  
    i = i + 1;  
    { $\{ s = b[0] + \dots + b[i-2] + b[i-1] \text{ and } i-1 \neq n \}$ }  
}  
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ }  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Are we done?
No, need to also check...

Does loop body preserve invariant?

Yes. Weaken by dropping “ $i-1 \neq n$ ”

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{\}$ }  
s = 0;  
{ $\{ s = 0 \}$ }  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ }  
    s = s + b[i];  
    { $\{ s = b[0] + \dots + b[i-1] + b[i] \text{ and } i \neq n \}$ }  
    i = i + 1;  
    { $\{ s = b[0] + \dots + b[i-2] + b[i-1] \text{ and } i-1 \neq n \}$ }  
}  
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ }  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Does loop body preserve invariant?

Are we done?
No, need to also check...

[$\{ \{ s + b[i] = b[0] + \dots + b[i] \} \}$]
s = s + b[i];
 $\{ \{ s = b[0] + \dots + b[i] \} \}$
i = i + 1
 $\{ \{ s = b[0] + \dots + b[i-1] \} \}$

Warning: not just filling in blanks

The following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{\}$ }  
s = 0;  
{ $\{ s = 0 \}$ }  
i = 0;  
{ $\{ s = 0 \text{ and } i = 0 \}$ }  
{ $\{ \text{Inv: } s = b[0] + \dots + b[i-1] \}$ }  
while (i != n) {  
    { $\{ s = b[0] + \dots + b[i-1] \text{ and } i \neq n \}$ }  
    s = s + b[i];  
    { $\{ s = b[0] + \dots + b[i-1] + b[i] \text{ and } i \neq n \}$ }  
    i = i + 1;  
    { $\{ s = b[0] + \dots + b[i-2] + b[i-1] \text{ and } i-1 \neq n \}$ }  
}  
{ $\{ s = b[0] + \dots + b[i-1] \text{ and not } (i \neq n) \}$ }  
{ $\{ s = b[0] + \dots + b[n-1] \}$ }
```

Does loop body preserve invariant?

Are we done?
No, need to also check...

{ $\{ s + b[i] = b[0] + \dots + b[i] \}$ }]

s = s + b[i];

{ $\{ s = b[0] + \dots + b[i] \}$ }

i = i + 1

{ $\{ s = b[0] + \dots + b[i-1] \}$ }

Yes. If Inv holds, then so does this
(just add $b[i]$ to both sides of Inv)

Example: sum of array (attempt 2)

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{{ b.length >= n }}  
s = 0;  
i = -1;                                ] Changed from i = 0  
while (i != n-1) {                      ] Changed from n  
    i = i + 1;                            ] Reordered  
    s = s + b[i];  
}  
{{ s = b[0] + ... + b[n-1] }}
```

Example: sum of array (attempt 2)

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{$  b.length >= n  $\}$ }  
s = 0;  
i = -1;  
{ $\{$  Inv: s = b[0] + ... + b[i]  $\}$ } ] Changed  
while (i != n-1) {  
    i = i + 1;  
    s = s + b[i];  
}  
{ $\{$  s = b[0] + ... + b[n-1]  $\}$ }
```

Example: sum of array (attempt 2)

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{$  b.length >= n  $\}$ }  
s = 0;  
i = -1;  
{ $\{$  Inv: s = b[0] + ... + b[i]  $\}$ }  
while (i != n-1) {  
    i = i + 1;            $\leftarrow$  { $\{$  s + b[i+1] = b[0] + ... + b[i+1]  $\}$ }  
    s = s + b[i];        $\leftarrow$  { $\{$  s + b[i] = b[0] + ... + b[i]  $\}$ }  
}  
{ $\{$  s = b[0] + ... + b[n-1]  $\}$ }
```

Example: sum of array (attempt 2)

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{$  b.length >= n  $\}$ }  
s = 0;  
i = -1;  
{ $\{$  Inv: s = b[0] + ... + b[i]  $\}$ }  
while (i != n-1) {  
    i = i + 1;  
    s = s + b[i];  
}  
{ $\{$  s = b[0] + ... + b[n-1]  $\}$ }
```

- ($s = 0$ and $i = -1$) implies **I**
 - as before
- $\{\{ I \text{ and } i \neq n-1 \}\} \subseteq \{\{ I \}\}$
 - reason backward:
 - $\{\{ s + b[i+1] = b[0] + \dots + b[i+1] \}\}$
 - $\{\{ s + b[i] = b[0] + \dots + b[i] \}\}$
- (**I** and $i = n-1$) implies **Q**
 - as before

Example: sum of array (attempt 3)

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{$  b.length >= n  $\}$ }  
s = 0;  
i = -1;  
{ $\{$  Inv: s = b[0] + ... + b[i]  $\}$ }  
while (i != n-1) {  
    s = s + b[i];  
    i = i + 1;  
}  
{ $\{$  s = b[0] + ... + b[n-1]  $\}$ }
```

Suppose we miss-order the assignments to i and s ...

Where does the correctness check fail?

Example: sum of array (attempt 3)

Consider the following code to compute $b[0] + \dots + b[n-1]$:

```
{ $\{$  b.length >= n  $\}$ }  
s = 0;  
i = -1;  
{ $\{$  Inv: s = b[0] + ... + b[i]  $\}$ }  
while (i != n-1) {  
    s = s + b[i];  
    i = i + 1;  
}  
{ $\{$  s = b[0] + ... + b[n-1]  $\}$ }
```

Suppose we miss-order the assignments to i and s ...

We can spot this bug because the invariant does not hold:

$\{$ $s + b[i] = b[0] + \dots + b[i+1]$ $\}$
 $\{$ $s = b[0] + \dots + b[i+1]$ $\}$
 $\{$ $s = b[0] + \dots + b[i]$ $\}$

First assertion is not Inv.
