Write two different representations for the Rectangle ADT in the starter code below, including **abstraction functions** for each representation.

Write your class specification below

```java
/*
   public class Rectangle {
       Your fields for your representation and your abstraction function go below
   }
*/
```
/*
 * Uses the same class specification as above
 */

class Rectangle {
    Your fields for your representation and your abstraction function go below
}
