

Let x and L be LinkedList Nodes.

Analyzing append

```

1 append(x, L) {
2   Node curr = L;
3   while (curr != null && curr.next != null) {
4     curr = curr.next;
5   }
6   curr.next = x;
7 }

```

$O(n)$

LinkedList Reversal

```

1 reverse(L) {
2   if (L == null) {
3     return null;
4   }
5   } else {
6     Node front = L;
7     Node rest = L.next;
8     L.next = null;
9
10    Node restReversed = reverse(rest);
11    append(front, restReversed);
12  }
13 }

```

else if (L.next == null) {
return L;
