

# CSE 332: Data Structures and Parallelism

Fall 2022  
Richard Anderson  
Lecture 1: Introduction, Stacks and Queues

## Welcome!

*Fundamental data structures and algorithms for organizing and processing information*

- "Classic" data structures / algorithms and how to analyze rigorously their efficiency and when to use them
- Queues, dictionaries, graphs, sorting, etc.
- Parallelism and concurrency (!)
- NP-Completeness (!!)

## CSE 332 Team

- Instructor: Richard Anderson, CSE2 344
- TAs:
  - Nathan Akkaraphab
  - Arya Krisna
  - Winston Jodjana
  - Sylvia Wang
  - Amanda Yuan
  - Allyson Mangus
  - Rahul Misal
  - Chandni Rajasekaran

## Today's Outline

- Introductions
- **Administrative Info**
- What is this course about?
- Review: queues and stacks

## Course Information

<http://www.cs.washington.edu/332>

The screenshot shows the course website for CSE 332. At the top, there is a navigation bar with links for Home, Calendar, Lectures, Office Hours, Sections, Assignments, and Handouts. The main content area is divided into sections: 'Home' with a disclaimer about the site's construction, a 'Just registered for this course?' section with an email link, and an 'Asking Questions & Getting Help' section with instructions on how to ask questions. A sidebar on the right contains 'Links' for Syllabus, Staff, Office Hours, and Anonymous Feedback, and 'Course Tools' for Ed Message Board, Gradescope, Panopto Recordings, and Canvas.

## Course Information

- Course Website  
<http://www.cs.washington.edu/332>
- Ed Message Board
- Gradescope
- Panopto Recordings

## Text Book

- Data Structures and Algorithm Analysis in Java, 3<sup>rd</sup> Edition.  
Mark Weiss
  - UW Bookstore, \$184.25
  - Amazon, \$132.98 (\$61.91 Used)
  - eTextbook, \$74.99
  - Paperback, \$58.00
  - eBay, \$4.73 (2<sup>nd</sup> Edition)

9/28/2022

CSE 332

7

## Course meetings

- Lecture
  - Materials posted (sometimes afterwards), but take notes
  - Ask questions, focus on key ideas (rarely coding details)
- Section
  - Practice problems!
  - Answer Java/project/homework questions, etc.
  - Occasionally may introduce new material
  - An important part of the course (not optional)
- Office hours
  - Use them: *please visit us!*

9/28/2022

CSE 332

8

## Course Work

- ~20 Weekly individual homework exercises
- 3 programming projects (with phases)
  - Use Java, Gitlab
  - Single person projects (this is a change from previous quarters)
- Midterm and final exam
  - In class
    - Midterm: Friday, November 4
    - Final: Thursday, December 15, 8:30 AM.

9/28/2022

CSE 332

9

## Overall grading

### Grading

- 25% - Written Homework Assignments
- 35% - Programming Assignments
- 15% - Midterm Exam (Nov 4)
- 25% - Final Exam (Dec 15, 8:30 AM)

9/28/2022

CSE 332

10

## Section

Meet on Thursdays

What happens there?

- Answer questions about current homework
- Previous homeworks returned and discussed
- Discuss the project (getting started, getting through it, answering questions)
- Finer points of Java, etc.
- Reinforce lecture material

9/28/2022

CSE 332

11

## Homework for Today!!

1. **Project #1:** [Checkpoint 1, Oct 6 at 11:59 pm](#)
2. **Exercise #1:** [Due Monday, Oct 3 at 11:59 pm](#)
3. **Review Java**
4. **Reading in Weiss** (see course web page)
  - (Topic for Project #1) Weiss 3.1-3.7 – Lists, Stacks, & Queues
  - (Friday) Weiss 2.1-2.4 –Algorithm Analysis
  - (Useful) Weiss 1.1-1.6 –Mathematics and Java

9/28/2022

CSE 332

12

## Today's Outline

- Introductions
- Administrative Info
- **What is this course about?**
- Review: Queues and stacks

9/28/2022

CSE 332

13

## Common tasks

- Many possible solutions
  - Choice of algorithm, data structures matters
  - What properties do we want?

9/28/2022

CSE 332

14

## Why should we care?

- Computers are getting faster
  - › No need to optimize
- Libraries: experts have done it for you

9/28/2022

CSE 332

15

## Program Abstraction

Problem defn:

Algorithm:

Implementation:

9/28/2022

CSE 332

16

## Data Abstraction

Abstract Data Type (ADT):

Data Structure:

Implementation:

9/28/2022

CSE 332

17

## Trade offs: storing a set

9/28/2022

CSE 332

18

## Terminology

- Abstract Data Type (ADT)
  - Mathematical description of an object with set of operations on the object. Useful building block.
- Algorithm
  - A high level, language-independent, description of a step-by-step process.
- Data structure
  - A specific organization of the data to accompany algorithms for an abstract data type.
- Implementation of data structure
  - A specific implementation in a specific language.

9/28/2022

CSE 332

19

## Today's Outline

- Introductions
- Administrative Info
- What is this course about?
  - Review: queues and stacks

9/28/2022

CSE 332

20

## First Example: Queue ADT

- FIFO: First In First Out
- Queue operations
  - create
  - destroy
  - enqueue
  - dequeue
  - is\_empty

9/28/2022

CSE 332

21

## Queues in practice

- Print jobs
- File serving
- Phone calls and operators

(Later, we will consider "priority queues.")

9/28/2022

CSE 332

22

## Array Queue Data Structure

```
enqueue(Object x) {
    Q[back] = x
    back = (back + 1)
}
```

What's missing in these functions?

```
dequeue() {
    x = Q[0]
    shiftLeftOne()
    back = (back - 1)
    return x
}
```

How to find K-th element in the queue?

9/28/2022

CSE 332

23

## Circular Array Queue Data Structure

```
enqueue(Object x) {
    assert(!is_full())
    Q[back] = x
    back = (back + 1)
}
```

How test for empty/full list?

```
dequeue() {
    assert(!is_empty())
    x = Q[front]
    front = (front + 1)
    return x
}
```

How to find K-th element in the queue?

What to do when full?

9/28/2022

CSE 332

24

## Linked List Queue Data Structure

```

void enqueue(Object x) {
    if (is_empty())
        front = back = new Node(x)
    else {
        back->next = new Node(x)
        back = back->next
    }
}

bool is_empty() {
    return front == null
}

Object dequeue() {
    assert(!is_empty())
    return_data = front->data
    temp = front
    front = front->next
    delete temp
    return return_data
}
    
```

## Circular Array vs. Linked List

- Advantages of circular array?
- Advantages of linked list?

## Second Example: Stack ADT

- LIFO: Last In First Out
- Stack operations
  - create
  - destroy
  - push
  - pop
  - top
  - is\_empty

## Stacks in Practice

- Function call stack
- Removing recursion
- Balancing symbols (parentheses)
- Evaluating postfix or “reverse Polish” notation

## Assigned readings

### Reading in Weiss

- Chapter 1 – (Review) Mathematics and Java
- Chapter 2 – (Next lecture) Algorithm Analysis
- Chapter 3 – (Project #1) Lists, Stacks, & Queues
