

CSE 332: Data Structures and Parallelism

Fall 2022
Richard Anderson
Lecture 29: NP-Completeness II

12/9/2022 CSE 332 1

1

Announcements

- Final
 - Thursday, December 15, 8:30-10:20 AM, CSE2 G20
 - No notes, calculator, internet, etc.
 - Comprehensive
 - All topics covered on the lecture slides
 - Estimate: 1/3rd pre-midterm, 2/3rd post-midterm
- Resources
 - Old exams
 - Review session, Tuesday, December 13, 4:30-6 PM, location CSE2 G10

12/9/2022 CSE 332 2

2

Where we are in the story

$e^{i\pi} = -1$

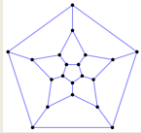

Eulerian Circuit:
Easy, Polynomial time

$i^2 + j^2 + k^2 = ijk = -1$

Hamiltonian Cycle:
Seems hard, Exponential time

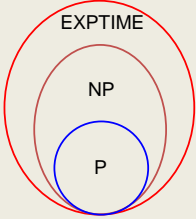

12/9/2022 CSE 332 3

3

NP Completeness

- “Easy problems” – solvable in Polynomial Time
- Hard problems – take exponential time
- Interesting class of problems: Non-deterministic polynomial time

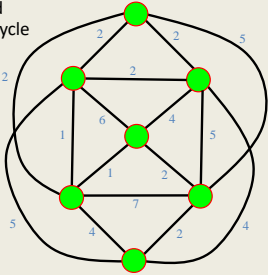

12/9/2022 CSE 332 4

4

Travelling Salesman Problem

Given a connected, undirected graph with edge costs, find a cycle that includes all vertices with minimum total edge cost

Notes:

- 1) The cycle does not need to be simple, so it can visit vertices multiple times
- 2) The graph is often assumed to be complete. Missing edges can be given a cost of ∞ .

How does TSP relate to HC?

12/9/2022 CSE 332 5

5

Problem Reduction

- Hamiltonian Circuit
 - Given a graph, is there a simple cycle that includes all of the vertices
- Travelling Salesman Problem
 - Given a complete graph with edge costs and a constant C, is there a cycle that visits all vertices with total cost at most C
- A reduction of HC to TSP uses an instance of TSP to solve an instance of HC
- This shows TSP is **harder** than HC

12/9/2022 CSE 332 6

6

Transforming HC into TSP

- We can transform Hamiltonian Cycle into TSP.
- Given graph $G=(V, E)$:
 - Assign weight of 1 to each edge
 - Augment the graph with edges until it is a complete graph $G'=(V, E')$.
 - Assign weight of 2 to the new edges.
 - Let $C = |V|$.

7

Examples

12/9/2022

CSE 332

8

8

What is NP?

- Problems solvable in non-deterministic polynomial time . . .
- Problems where “yes” instances have polynomial time checkable certificates

12/9/2022

CSE 332

9

9

Certificate examples

- Independent set of size K
 - The Independent Set
- Satisfiable formula
 - Truth assignment to the variables
- Hamiltonian Circuit Problem
 - A cycle including all of the vertices
- K -coloring a graph
 - Assignment of colors to the vertices

12/9/2022

CSE 332

10

10

Certifiers and Certificates: 3-Satisfiability

SAT: Does a given CNF formula have a satisfying formula
 Certificate: An assignment of truth values to the n boolean variables
 Certifier: Check that each clause has at least one true literal

Instance

$$(\bar{x}_1 \vee x_2 \vee x_3) \wedge (x_1 \vee \bar{x}_2 \vee x_3) \wedge (x_1 \vee x_2 \vee x_4) \wedge (\bar{x}_1 \vee \bar{x}_3 \vee \bar{x}_4)$$

Certificate

$$x_1 = 1, x_2 = 1, x_3 = 0, x_4 = 1$$

12/9/2022

CSE 332

11

11

Certifiers and Certificates: Hamiltonian Cycle

HAM-CYCLE: Given an undirected graph $G = (V, E)$, does there exist a simple cycle C that visits every node?

Certificate: A permutation of the n nodes.

Certifier: Check that the permutation contains each node in V exactly once, and that there is an edge between each pair of adjacent nodes in the permutation.

CSE 332

12

12

Polynomial time reductions

- Y is Polynomial Time Reducible to X
 - Solve problem Y with a polynomial number of computation steps and a polynomial number of calls to a black box that solves X
 - Notations: $Y \leq_p X$

12/9/2022

CSE 332

13

13

Lemmas

- Suppose $Y \leq_p X$. If X can be solved in polynomial time, then Y can be solved in polynomial time.
- Suppose $Y \leq_p X$. If Y cannot be solved in polynomial time, then X cannot be solved in polynomial time.

12/9/2022

CSE 332

14

14

NP-Completeness

- A problem X is NP-complete if
 - X is in NP
 - For every Y in NP, $Y \leq_p X$
- X is a “hardest” problem in NP
- If X is NP-Complete, Z is in NP and $X \leq_p Z$
 - Then Z is NP-Complete

12/9/2022

CSE 332

15

15

Cook’s Theorem

- The Circuit Satisfiability Problem is NP-Complete

12/9/2022

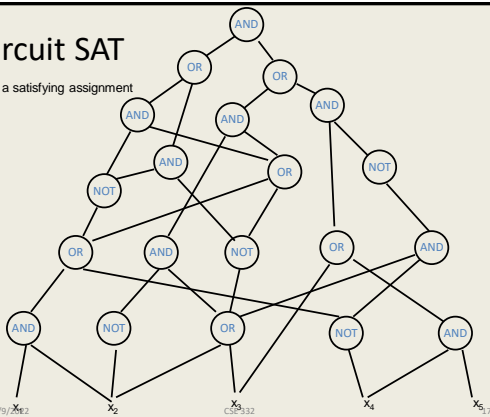

CSE 332

16

16

Circuit SAT

Find a satisfying assignment

12/9/2022

CSE 332

17

17

Proof of Cook’s Theorem

- Reduce an arbitrary problem Y in NP to Circuit SAT
- Let A be a non-deterministic polynomial time algorithm for Y
- Convert A to a circuit, so that instance I of Y is a Yes instance iff and only if the circuit is satisfiable

12/9/2022

CSE 332

18

18

Populating the NP-Completeness Universe

- Circuit Sat \leq_p 3-SAT
- 3-SAT \leq_p Independent Set
- 3-SAT \leq_p Vertex Cover
- Independent Set \leq_p Clique
- 3-SAT \leq_p Hamiltonian Circuit
- Hamiltonian Circuit \leq_p Travelling Salesman
- 3-SAT \leq_p Integer Linear Programming
- 3-SAT \leq_p Graph Coloring
- 3-SAT \leq_p Subset Sum
- Subset Sum \leq_p Scheduling with Release times and deadlines

CSE 332

19

P, NP, NPC, and Exponential Time Problems

- All **currently known** algorithms for NP-complete problems run in **exponential** worst case time
- Diagram depicts relationship between P, NP, and EXPTIME (class of problems that **provably require** exponential time to solve)

It is believed that $P \neq NP \neq EXPTIME$
