

# CSE 332: Data Structures & Parallelism

## Lecture 24: Topological Sort

Ruth Anderson  
Winter 2025

# *Today*

- Graphs
  - Topological Sort

# Topological Sort

Problem: Given a DAG  $G = (V, E)$ , output all the vertices in order such that if no vertex appears before any other vertex that has an edge to it

Example input:

Example output:

142, 126, 143, 311, 331, 332, 312, 341, 351, 333, 440, 352

**Valid Topological  
Sorts:**

# *Questions and comments*

- Why do we perform topological sorts only on DAGs?
- Is there always a unique answer?
- What DAGs have exactly 1 answer?
- Terminology: A DAG represents a **partial order** and a topological sort produces a **total order** that is consistent with it

# *Topological Sort Uses*

- Scheduling instructions/tasks
- Figuring out how to finish your degree
- Computing the order in which to recompute cells in a spreadsheet
- Determining the order to compile files using a Makefile
- In general, taking a dependency graph and coming up with an order of execution

# A First Algorithm for Topological Sort

1. Label (“mark”) each vertex with its in-degree
  - Think “write in a field in the vertex”
  - Could also do this via a data structure (e.g., array) on the side
2. While there are vertices not yet output:
  - a) Choose a vertex  $v$  labeled with in-degree of 0
  - b) Output  $v$  and *conceptually* remove it from the graph
  - c) For each vertex  $w$  adjacent to  $v$  (i.e.  $w$  such that  $(v,w)$  in  $\mathbf{E}$ ), decrement the in-degree of  $w$

decrement the in-degree of  $w$

Disclaimer: Do not use for official advising purposes!  
 (e.g. Implies that CSE 332 is a pre-req for CSE 312 – not true)

# Example

Output:

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?												
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1

# Example

Output: 126

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x											
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1									

# Example

Output: 126  
142

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x										
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1									
			0									

# Example

Output: 126  
142  
143

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x									
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0		0			0	0		
			0									

# Example

Output: 126  
142  
143  
311  
...

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x								
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0		0	0		
			0									

# Example

Output: 126  
 142  
 143  
 311  
 331

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x		x						
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0		0	0		
			0									

# Example

Output: 126  
 142  
 143  
 311  
 331  
 332

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x		x	x					
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0	1	0	0		0
			0		0							

# Example

Output: 126  
 142  
 143  
 311  
 331  
 332  
 312

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x	x	x	x					
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0	1	0	0		0
			0		0							

# Example

Output: 126  
 142  
 143  
 311  
 331  
 332  
 312  
 341

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x	x	x	x		x			
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0	1	0	0		0
			0		0							

# Example

Output: 126  
 142  
 143  
 311  
 331  
 332  
 312  
 341  
 351

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x	x	x	x		x	x		
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0	1	0	0	0	0
			0		0			0				

# Example

Output: 126  
 142  
 143  
 311  
 331  
 332  
 312  
 341  
 351  
 333  
 352  
 440

Node:	126	142	143	311	312	331	332	333	341	351	352	440
Removed?	x	x	x	x	x	x	x	x	x	x	x	x
In-degree:	0	0	2	1	2	1	1	2	1	1	1	1
			1	0	1	0	0	1	0	0	0	0
			0		0			0				

## *A couple of things to note*

- Needed a vertex with in-degree of 0 to start
  - No cycles
- Ties between vertices with in-degrees of 0 can be broken arbitrarily
  - Potentially many different correct orders

# *Topological Sort: Running time?*

```
labelEachVertexWithItsInDegree();  
for(ctr=0; ctr < numVertices; ctr++){  
    v = findNewVertexOfDegreeZero();  
    put v next in output  
    for each w adjacent to v  
        w.indegree--;  
}
```

# Doing better

The trick is to avoid searching for a zero-degree node every time!

- Keep the “pending” zero-degree nodes in a list, stack, queue, box, table, or something
- Order we process them affects output but not correctness or efficiency provided add/remove are both  $O(1)$

Using a queue:

1. Label each vertex with its in-degree, enqueue 0-degree nodes
2. While queue is not empty
  - a)  $\mathbf{v} = \text{dequeue}()$
  - b) Output  $\mathbf{v}$  and remove it from the graph
  - c) For each vertex  $\mathbf{w}$  adjacent to  $\mathbf{v}$  (i.e.  $\mathbf{w}$  such that  $(\mathbf{v}, \mathbf{w})$  in  $\mathbf{E}$ ), decrement the in-degree of  $\mathbf{w}$ , if new degree is 0, enqueue it

# *Topological Sort(optimized): Running time?*

```
labelAllAndEnqueueZeros();  
for(ctr=0; ctr < numVertices; ctr++){  
    v = dequeue();  
    put v next in output  
    for each w adjacent to v {  
        w.indegree--;  
        if(w.indegree==0)  
            enqueue(w);  
    }  
}
```
