

Administrivia

- ❖ Please please PLEASE fill out Course Evals!
 - If you deleted the email, links are posted to Piazza
 - As of 11am today, only 16% of you have completed it 🙄
- ❖ If you  your TA , nominate them for the Bob Bandes Award!
- ❖ Information about the final will be posted later today
 - Optional review session to be scheduled over the weekend
- ❖ Extra office hours on Friday: 3-5pm

Threat Modeling and API Design

- ❖ Guest Lecturer: Albert J. Wong
 - UW CSE, 2002
 - Early Chrome developer; founding member of US Digital Service

- ❖ Lecture goal:
 - We've spent the entire quarter looking at software and APIs that are almost 50y old
 - If we were to do a deep-dive on why they've stood the test of time ... this course would become 331
 - Instead, we're going to use "threat modeling" as a case study of how thinking critically about your *constraints* and *requirements* yields long-lived software and APIs.
