

CSE 341: Programming Languages

Spring 2007
Lecture 30 — Final Review

Exam: Wednesday June 6, 8:30-10:20 AM

CSE 341 Spring 2007, Lecture 30

1

CSE 341 Spring 2007, Lecture 30

2

Scheme

- Basics: syntax, evaluation, special forms (define, lambda, conditionals, let)
- Binding forms (define, parameters, let and its variations)
- Parameter passing mechanisms: call-by-value, call-by-name, call-by-need (lazy evaluation)
- Use of closures to realize thunks, delayed evaluation
- Implementation strategies: basic difference between compilers and interpreters
- Scheme implementation: environments, eval/apply, using closures to implement higher-order functions
- Functions vs macros

3

CSE 341 Spring 2007, Lecture 30

4

General

Comprehensive — Re-review Midterm topics list
But some emphasis on topics since midterm & unifying concepts
Review homework solutions, too
Closed book, closed notes
Similar format to midterm: T/F, short answer, compare/contrast, read & evaluate code, write code

Overall

- Recursion & iteration
- First class functions; closures
- Higher-order functions & functional programming (map, fold, etc.)
- Type system design and tradeoffs; static vs. dynamic typing
- Side-effects; evaluation order
- Garbage collection

5

Course Evals

Please include "Additional Items" on back side of mark-sense form.
Yellow sheets come to me (after grades are turned in). Comments on all aspects of course are welcome—books, lectures, TAs, homework, etc.

General Glowing Praise for your instructor is always especially welcome...

Thanks and Good Luck on the Final!
