1). How many classes are being taught by at least one instructor?

SELECT COUNT(DISTINCT number) AS class_count
FROM Teaches;

-- General case: we'll solve using subqueries and grouping - first, we group the
-- Teaches table by department and number in a subquery, then
-- we count the number of groups in the top-level query.

-- Note that we don't care what the subquery tuples are, only how many
tuples/groups there are, so we return dummy tuples containing only the
count 1.

SELECT COUNT(*) AS class_count
FROM (SELECT 1
FROM Teaches
GROUP BY dept, number
) x ;

2). Which instructors teach more than 1 class?

-- With grouping -- no subquery
SELECT i.username, i.fname, i.lname
FROM Instructor i, Teaches t
WHERE i.username = t.username
GROUP BY i.username, i.fname, i.lname
HAVING COUNT(*) > 1;

-- Without grouping -- uses subquery
-- We refer to this kind of subquery as a correlated subquery
-- i is unbound in context of subquery, but is correlated to outer query
-- For each instructor, we issue the subquery

SELECT i.username, i.fname, i.lname
FROM Instructor i
WHERE 1 < (SELECT COUNT(*)
FROM Teaches t
WHERE t.username = i.username
);
3). Which courses do neither Dr. Levy nor Dr. Wetherall teach?

-- Sounds like a universal quantifier will be needed (e.g. NOT IN, ONLY, ALL)!
-- wrong --- why?
SELECT c.dept, c.number, c.title
FROM Class c, Teaches t
WHERE c.dept = t.dept AND
  c.number = t.number AND
  t.username NOT IN ('levy', 'djw')
;
-- This query incorrectly returns CSE 451 and 461 (twice, in fact),
-- because there are tuples in the join where the uid is neither
-- levy or djw, but the class is 451 and 461 -- this comes about
-- from the fact that tom and zahorjan teach those classes.

-- Here's a corrected version that tests that the *class number*
-- is not in the list that Hank and David teach:
SELECT *
FROM Class c
WHERE c.dept = 'CSE' AND
  c.number NOT IN (SELECT c.number
                       FROM Class c, Teaches t
                       WHERE c.dept = t.dept AND
                         c.number = t.number AND
                         t.username IN ('levy', 'djw'))
;
-- This (correctly) returns only CSE 378.
