CSE 344

Intro to Data Mgt

25 wi

James Wilcox

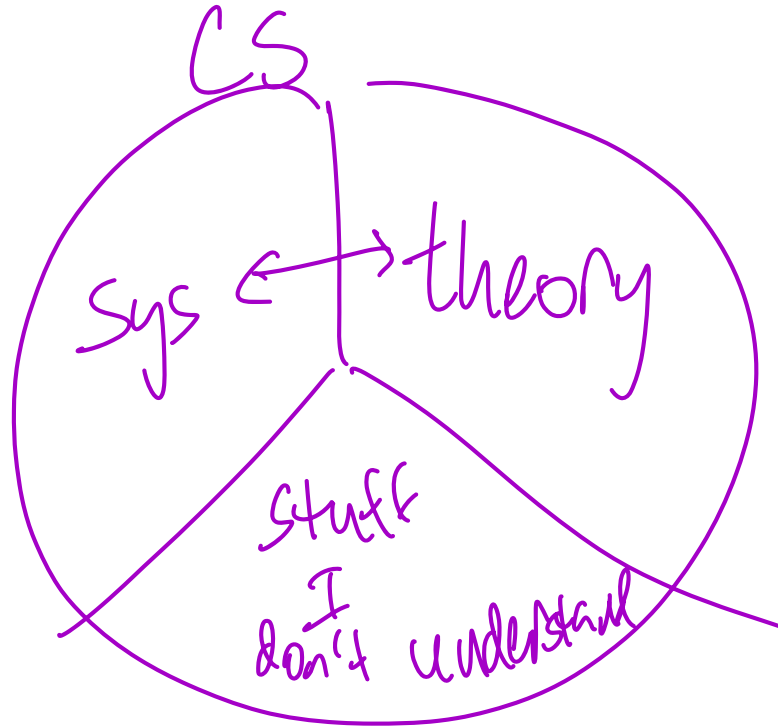

Why are we here?

- in your way to 444
- building applications
 - database-backed applications
 - storage

What is database / database management system (DBMS)

- something that stores data
 - ↳ a server?
- sorted, ordered, organize
- persistent memory
permanent
- James's opinion: a collection of data

Systems ~~is~~ and theory

A DB is a collection of data

Relational Model : a database is a bunch
of sets of tuples
relation

CSE 211

$$\{1, 2, 3\} \times \{ "a", "b" \}$$
$$= \{ (1, a), (1, b), (2, a), (2, b), (3, a), (3, b) \}$$

A relation is a set of tuples.

A relation on A_1, \dots, A_n

is a subset of $A_1 \times \dots \times A_n$

Example: $A_1 = \{1, 2, 3\}$ $A_2 = \{a, b\}$

$$R = \{(1, a), (2, b)\} \subseteq A_1 \times A_2$$

$$S = \emptyset \subseteq A_1 \times A_2$$

A table is a 2d grid

header →

columns

int	bool	int	string	time
17			hi	8:30am
	false			

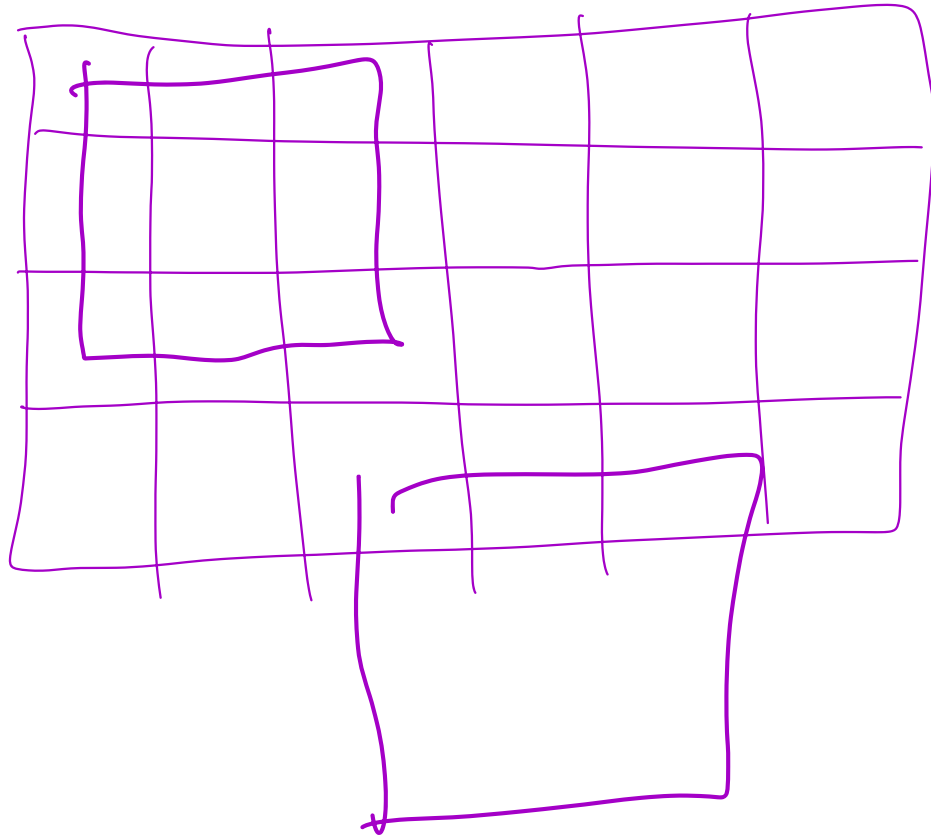

rows

Asymmetry between
rows and columns

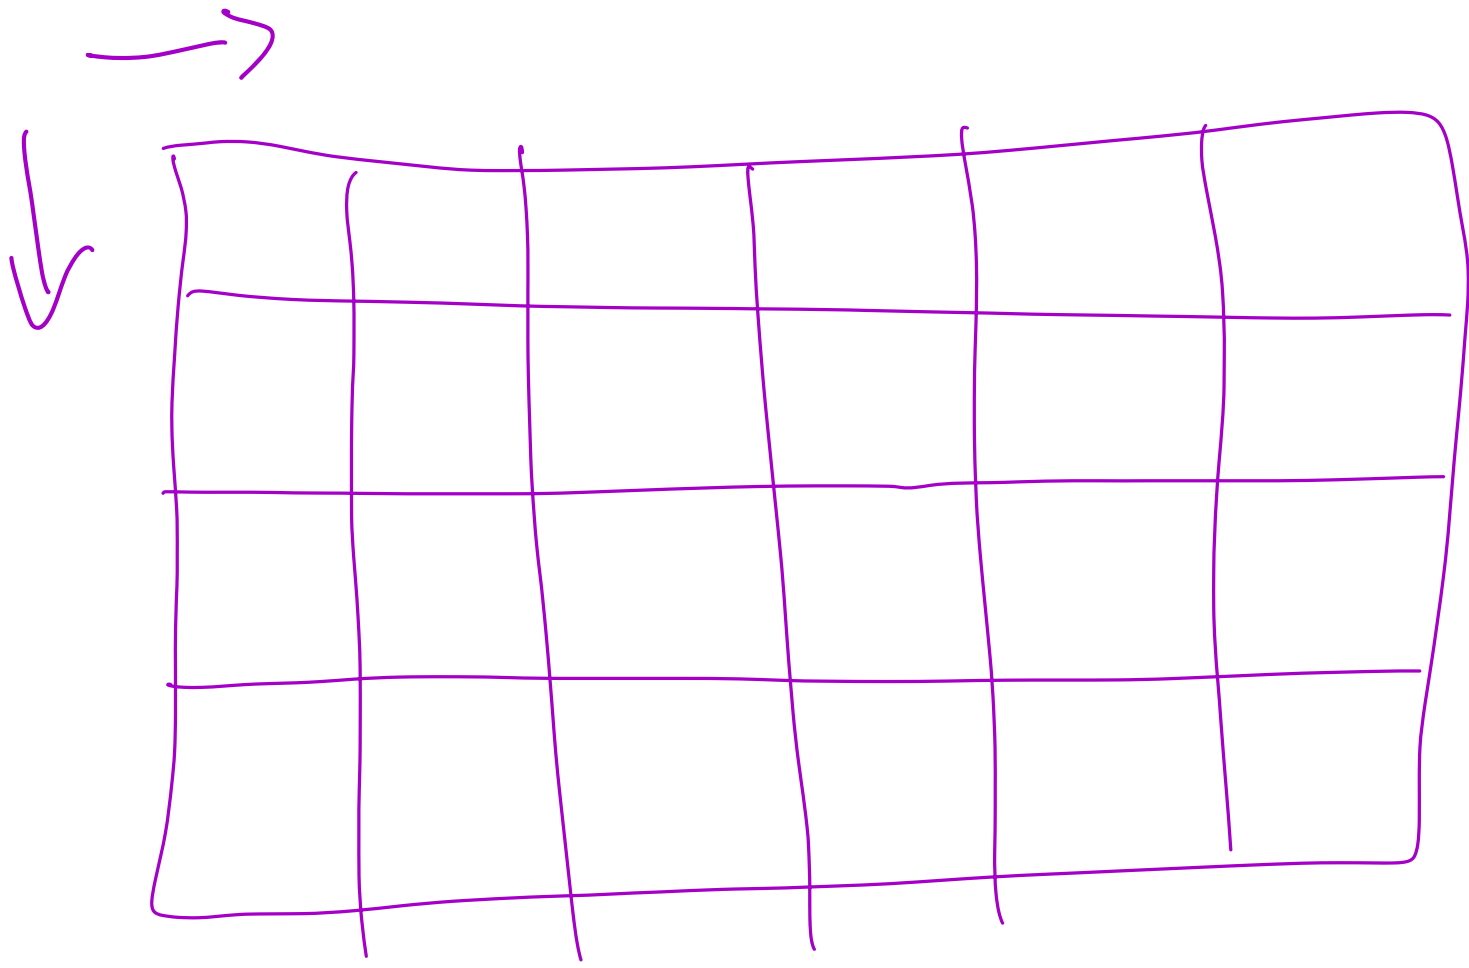

columns, attributes, fields

rows, tuple,
record, object

$\{1, 2, 3\}$	$\{a, b\}$
<u>1</u>	a
2	b

how to use SS as a rel.
- each column has a
type

Straw Proposals

- bad idea that I have had
