Final Exam: Friday, 23 August, 1 hour in class

- Comprehensive, but with strong focus on material in 2\textsuperscript{nd} half.
- caches
  - probably of the mysterious variety
  - cache behavior of programs
- virtual memory (like HW 4)
- concepts of processes and exceptional control flow
- memory allocation (review Lab 5), concepts of garbage collection
- Java vs. C
  - finish up on Monday
- And older topics here and there, including:
  - translating and debugging assembly and C
  - pointers, arrays
  - buffer overflows
- Past quarters’ exams are on the website...
