Assembly Instructions

mov a, b	Copy from a to b.
movs a, b	Copy from a to b with sign extension. Needs <i>two</i> width specifiers.
movz a, b	Copy from a to b with zero extension. Needs <i>two</i> width specifiers.
lea a, b	Compute address and store in b. <i>Note:</i> the scaling parameter of memory operands can only be 1, 2, 4, or 8.
push src	Push <code>src</code> onto the stack and decrement stack pointer.
pop dst	Pop from the stack into <code>dst</code> and increment stack pointer.
call <func>	Push return address onto stack and jump to a procedure.
ret	Pop return address and jump there.
add a, b	Add from a to b and store in b (and sets flags).
sub a, b	Subtract a from b (compute $b-a$) and store in b (and sets flags).
imul a, b	Multiply a and b and store in b (and sets flags).
and a, b	Bitwise AND of a and b, store in b (and sets flags).
sar a, b	Shift value of b <i>right (arithmetic)</i> by a bits, store in b (and sets flags).
shr a, b	Shift value of b <i>right (logical)</i> by a bits, store in b (and sets flags).
shl a, b	Shift value of b <i>left</i> by a bits, store in b (and sets flags).
cmp a, b	Compare b with a (compute $b-a$ and set condition codes based on result).
test a, b	Bitwise AND of a and b and set condition codes based on result.
jmp <label>	Unconditional jump to address.
j* <label>	Conditional jump based on condition codes (<i>more on next page</i>).
set* a	Set byte a to 0 or 1 based on condition codes.
