## The Hardware/Software Interface <br> CSE 351 Winter 2019

## Instructors:

Max Willsey
Luis Ceze
Teaching Assistants:
Britt Henderson
Lukas Joswiak
Josie Lee
Wei Lin
Daniel Snitkovsky
Luis Vega
Kory Watson
lvy Yu

AN $\times 64$ PROCESSOR IS SCREAMING ALONG AT BUIONSOF CYCLES PER SECOND TO RUN THE XNU KERNEL, WHICH IS FRANICALLY WORKING THROUGH PLL THE POSIX-SPECIFED ABSTRACTON TO CREATE THE DARWIN SYSTEM UNDERIUING OS X, WHICH IN TURN IS STRAINING ITSELF TO RUN FIREFOX AND ITS GECKO RENDERER, WHICH CREATES A RASH OBTECT WHICH RENDERS DOZENS OF UDEO FRAMES EVERY SECOND

BECAUSE I WANTED TO SEEA CAT JUMP INTO A BOX AND FALL OVER.

## Introductions: Course Staff

* Instructors: just call us Max and Luis (2 of us!
- PhD Student and Professor at UW
- $\mathrm{N}^{\text {th }}$ time teaching 351, Luis helped design it
- Learn more about us and the staff on the course website!
* Super TeAm:

Britt Henderson

Josie Lee

Wei Lin

Daniel Snitkovskiy

- Available in section, office hours, and on Piazza
- An invaluable source of information and help
* Get to know us
- We are here to help you succeed!

## Introductions: You!

* ~160 students registered, split across two lectures
* CSE majors, EE majors, and more
- Most of you will find almost everything in the course new
* Get to know each other and help each other out!
- Learning is much more fun with friends
- Working well with others is a valuable life skill
- Diversity of perspectives expands your horizons

## Welcome to CSE351!

110000011111101000011111
11110111011111000010010000011100
import android.widget.ImageView;
import android.widget.LinearLayout
0111010000011000
10001011010001000010010000010100
import android.widget. TextView; public class CardboardOver layView extends LinearLayout \{

If Set some reasonable defaults.
setDepthOffset(0.01f);
setColor(Color.rgb(150, 255, 180));
setVisibility(View.VISIBLE);
textFadeAnimation $=$ new AlphaAnimation(1.0f, 0.0f); textFadeAnimation. setDuration(50日0);

* Our goal is to teach you the key abstractions "under the hood"
- How does your source code become something that your computer understands?
- What happens as your computer is executing one or more processes?

## Welcome to CSE351!

* This is an introduction that will:
- Profoundly change/augment your view of computers and programs
- Leave you impressed that computers ever work

## Code in Many Forms

| if (x ! $=0$ ) $\mathrm{y}=(\mathrm{y}+\mathrm{z}) / \mathrm{x}$; |
| :---: |
| Compiler |
| ```cmpl $0, -4 (%ebp) je .L2 movl -12(%ebp), %eax movl -8(%ebp), %edx leal (%edx,%eax), %eax movl %eax, %edx sarl $31, %edx idivl -4(%ebp) movl %eax, -8(%ebp) .L2 :``` |
| Assembler |
| ```100000110111110000100100000011100000000000 0111010000011000 10001011010001000010010000010100 10001011010001100010010100010100 100011010000010000000010 1000100111000010 110000011111101000011111 11110111011111000010010000011100 10001001010001000010010000011000``` |

## High Level Language (e.g. C, Java)

Assembly Language

## Machine Code

## Roadmap

| C: | Java: |
| :---: | :---: |
|  | ```Car c = new Car(); c.setMiles(100); c.setGals(17); float mpg = c.getMPG();``` |

## Course Perspective

* CSE351 will make you a better programmer
- Purpose is to show how software really works
- Understanding of some of the abstractions that exist between programs and the hardware they run on, why they exist, and how they build upon each other
- Understanding the underlying system makes you more effective
- Better debugging
- Better basis for evaluating performance
- How multiple activities work in concert (e.g. OS and user programs)
- "Stuff everybody learns and uses and forgets not knowing"
* CSE351 presents a world-view that will empower you
- The intellectual and software tools to understand the trillions+ of 1 s and Os that are "flying around" when your program runs

## Lecture Outline

## * Course Introduction <br> * Course Policies

- https://courses.cs.washington.edu/courses/cse351/19wi/syllabus/
* Binary

## Bookmarks

* Course Website: http://cs.uw.edu/351
- Schedule, policies, materials, videos, assignments, etc.
* Discussion in Piazza (link in course Website):
- Announcements made here
- Ask and answer questions - staff will monitor and contribute
* Canvas (link in course Website):
- Assignment submissions and gradebook

## Textbooks

* Computer Systems: A Programmer's Perspective
- Randal E. Bryant and David R. O’Hallaron
- Website: http://csapp.cs.cmu.edu
- Must be (North American) 3rd edition
- http://csapp.cs.cmu.edu/3e/changes3e.html
- http://csapp.cs.cmu.edu/3e/errata.html
- This book really matters for the course!

BRYANT • O'HALLARON

- Lecture readings
- Practice problems and homework
* A good C book - any will do
- The C Programming Language (Kernighan and Ritchie)
- C: A Reference Manual (Harbison and Steele)

## Grading

* Homework: 20\% total
- Autograded; 20 submission attempts
- Group work okay
* Labs: 35\% total
- Graded by TAs; last submission graded
- Individual work only
* Exams: Midterm (15\%) and Final (25\%)
- Many old exams on course website
* EPA: Effort, Participation, and Altruism (5\%)

## Collaboration and Academic Integrity

* All submissions are expected to be yours and yours alone
* You are encouraged to discuss your assignments with other students (ideas), but we expect that what you turn in is yours
* It is NOT acceptable to copy solutions from other students or to copy (or start your) solutions from the Web (including Github)
* Our goal is that *YOU* learn the material so you will be prepared for exams, interviews, and the future

## EPA

* Encourage class-wide learning!
* Effort
- Attending office hours, completing all assignments
- Keeping up with Piazza activity
* Participation
- Making the class more interactive by asking questions in lecture, section, office hours, and on Piazza
- Peer instruction
* Altruism
- Helping others in section, office hours, and on Piazza

## Peer Instruction

* Increase real-time learning in lecture, test your understanding, increase student interactions
- Lots of research supports its effectiveness
* Multiple choice question at end of lecture "segment"
- 1 minute to decide on your own
- 2-4 minutes in pairs to reach consensus
- Learn through discussion

## Some fun topics that we will touch on

* Which of the following seems the most interesting to you?
a) What is a GFLEP and why is it used in computer benchmarks?
b) How and why does running many programs for a long time eat into your memory (RAM)?
c) What is stack overflow and how does it happen?
d) Why does your computer slow down when you run out of disk space?
e) What was the flaw behind the original Internet worm, the Heartbleed bug, and the Cloudbleed bug?
f) What is the meaning behind the different CPU specifications? (e.g. \# of cores, \# and size of cache, supported memory types)

## Tips for Success in 351

* Attend all lectures and sections
- Avoid devices during lecture please
* Do the textbook readings ahead of time
* Learn by doing
- Can answer many questions by writing small programs
* Visit Piazza often
- Ask questions and try to answer fellow students' questions
* Go to office hours
- Even if you don't have specific questions in mind
* Find a study and homework group
* Start assignments early
* Don't be afraid to ask questions

## To-Do List

* Admin
- Explore/read website thoroughly: http://cs.uw.edu/351
- Check that you are enrolled in Piazza; read posts
- Get your machine set up for this class (VM or attu) as soon as possible
* Assignments
- Pre-Course Survey due Friday (1/11)
- Lab 0 due Monday (1/14)
- HW 1 due next Wednesday (1/16)

## Lecture Outline

* Course Introduction
* Course Policies
* Binary
- Decimal, Binary, and Hexadecimal
- Base Conversion
- Binary Encoding

## Decimal Numbering System

* Ten symbols: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9
* Represent larger numbers as a sequence of digits
- Each digit is one of the available symbols
* Example: 70611in decimal (base 10)
- $7061_{10}=\left(7 \times 10^{3}\right)+\left(0 \times 10^{2}\right)+\left(6 \times 10^{10}\right)+\left(1 \times 10^{0}\right)$

$$
+L_{x} 1
$$

## Octal Numbering System

* Eight symbols: 0, 1, 2, 3, 4, 5, 6, 7

- Notice that we no longer use 8 or 9
* Base comparison:
- Base 10: $\underline{\theta}, 1,2,3,4,5,6,7,8$. 9, 10, 11, $12 \ldots$
- Base 8: $0,1,2,3,4,5,6,7,10,11,12,13,14 \ldots$ $3110-$

$$
1 \times 8+0=8
$$

$*$ Example: What is $7061_{8}$ in base 10 ?

- $7061_{8}=\left(7 \times 8^{3}\right)+\left(0 \times 8^{2}\right)+\left(6 \times 8^{1}\right)+\left(\underline{1} \times 8^{0}\right)=3633_{10}$

$$
+0+48+1
$$

## Warmup Question

*What is $34_{8}$ in base 10 ?
A. $32_{10} \quad 3 \times 8^{1}+4 \times 8^{0}=24+4=28$
B. $34_{10}$
C. $7_{10}$
D. $28{ }_{10}$
E. $35_{10}$

* Think on your own for a minute, then discuss with your neighbor(s)

## Binary and Hexadecimal

* Binary is base 2
- Symbols: 0, 1
"Zero bee"
- Convention: $2_{10}=10_{2}=0 b 10$
* Example: What is $0 b \frac{110}{2} 10$ in base 10 ?
- $0 b 110=110_{2}=\left(1 \times 2^{2}\right)+\left(1 \times 2^{1}\right)+\left(0 \times 2^{0}\right)=6_{10}$

$$
1 \times 4+1 \times 2+0 \times 1=4+2=6
$$

* Hexadecimal (hex, for short) is base $1_{12} 6_{B 14} 15$
- Symbols? 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F
- Convention: $16_{10}=10_{16}=0 \times 10$ "zero ex"
* Example: What is $0 x A \overline{5}$ in base 10 ?
- $0 x A 5=A 5_{16}=\left(10 \times 16^{1}\right)+\left(5 \times 16^{0}\right)=165_{10}$

$$
10+16+5 \times 1=160+5=185
$$

## Peer Instruction Question

* Which of the following orderings is correct?
A. $0 \times C<0 b 1010<11$
B. $0 x C<11<0 b 1010$
C. $11<0 b 1010<0 x C$
D. $0 b 1010<11<0 x C$
E. $0 b 1010<0 x C<11$
* Think on your own for a minute, then discuss with your neighbor(s)

## Converting to Base 10

* Can convert from any base to base 10
- $0 b 110=110_{2}=\left(1 \times 2^{2}\right)+\left(1 \times 2^{1}\right)+\left(0 \times 2^{0}\right)=6_{10}$
- $0 x A 5=A 5_{16}=\left(10 \times 16^{1}\right)+\left(5 \times 16^{0}\right)=165_{10}$
* We learned to think in base 10, so this is fairly natural for us
* Challenge: Convert into other bases (e.g. 2, 16)

## Challenge Question

* Convert $13_{10}$ into binary
: Hints:

- $2^{3}=8$ /
- $2^{2}=4$
- $2^{1}=2$
- $2^{0}=1$
* Discuss with your neighbor(s)

## Converting from Decimal to Binary

* Given a decimal number N :
- List increasing powers of 2 from right to left until $\geq \mathrm{N}$
- Then from left to right, ask is that (power of 2 ) $\leq \mathrm{N}$ ?
- If YES, put a 1 below and subtract that power from N
- If NO, put a 0 below and keep going

## Converting from Decimal to Base B

* Given a decimal number N:
- List increasing powers of $B$ from right to left until $\geq N$
- Then from left to right, ask is that (power of $B$ ) $\leq N$ ?
- If YES, put how many of that power go into N and subtract from N
- If NO, put a 0 below and keep going
- l60
* Example: 185 to hex

| $16^{2}=256$ | $16^{1}=16$ | $16^{0}=1$ |
| :---: | :---: | :---: |
| $\varnothing$ | $A$ | 5 |

$$
165_{10}=0 \times A 5
$$

## Converting Binary $\leftrightarrow$ Hexadecimal

* Hex $\rightarrow$ Binary
- Substitute hex digits, then drop any leading zeros
- Example: 0x2D to binary
- 0x2 is 0b0010, 0xD is 0b1101
- Drop two leading zeros, answer is Ob101101
* Binary $\rightarrow$ Hex
- Pad with leading zeros until multiple of 4 , then substitute each group of 4
- Example: Ob101101
- Pad to Ob 00101101
- Substitute to get 0x2D

| Base 10 | Base 2 | Base 16 |
| :---: | :---: | :---: |
| 0 | 0000 | 0 |
| 1 | 0001 | 1 |
| 2 | 0010 | 2 |
| 3 | 0011 | 3 |
| 4 | 0100 | 4 |
| 5 | 0101 | 5 |
| 6 | 0110 | 6 |
| 7 | 0111 | 7 |
| 8 | 1000 | 8 |
| 9 | 1001 | 9 |
| 10 | 1010 | $A$ |
| 11 | 1011 | B |
| 12 | 1100 | $C$ |
| 13 | 1101 | $D$ |
| 14 | 1110 | $E$ |
| 15 | 1111 | $F$ |

## Binary $\rightarrow$ Hex Practice

## OX DEADBEFF

OXCDFFEE

* Convert Ob10011011010h101
- How many digits? 4 hex is him
- Pad: 0100110110101101
- Substitute: Ox YDAD

| Base 10 | Base 2 | Base 16 |
| :---: | :---: | :---: |
| 0 | 0000 | 0 |
| 1 | 0001 | 1 |
| 2 | 0010 | 2 |
| 3 | 0011 | 3 |
| 4 | 0100 | 4 |
| 5 | 0101 | 5 |
| 6 | 0110 | 6 |
| 7 | 0111 | 7 |
| 8 | 1000 | 8 |
| 9 | 1001 | 9 |
| 10 | 1010 | A |
| 11 | 1011 | B |
| 12 | 1100 | C |
| 13 | 1101 | D |
| 14 | 1110 | E |
| 15 | 1111 | F |

## Base Comparison

*Why does all of this matter?

- Humans think about numbers in base 10, but computers "think" about numbers in base 2
- Binary encoding is what allows computers to do all of the amazing things that they do!
* You should have this table memorized by the end of the class
- Might as well start now!

| Base 10 | Base 2 | Base 16 |
| :---: | :---: | :---: |
| 0 | 0000 | 0 |
| 1 | 0001 | 1 |
| 2 | 0010 | 2 |
| 3 | 0011 | 3 |
| 4 | 0100 | 4 |
| 5 | 0101 | 5 |
| 6 | 0110 | 6 |
| 7 | 0111 | 7 |
| 8 | 1000 | 8 |
| 9 | 1001 | 9 |
| 10 | 1010 | A |
| 11 | 1011 | B |
| 12 | 1100 | C |
| 13 | 1101 | D |
| 14 | 1110 | E |
| 15 | 1111 | F |

## Numerical Encoding

* AMAZING FACT: You can represent anything countable using numbers!
- Need to agree on an encoding
- Kind of like learning a new language
* Examples:
- Decimal Integers: $0 \rightarrow 0 \mathrm{b0}, 1 \rightarrow 0 \mathrm{~b} 1,2 \rightarrow 0 \mathrm{~b} 10$, etc.
- English Letters: CSE $\rightarrow 0 \times 435345$, yay $\rightarrow 0 \times 796179$
- Emoticons: 0x0, $-0 \times 1,0 \times 2$, (3) $0 \times 3$, $0 \times 4$, $0 \times 5$

## Binary Encoding

* With N binary digits, how many "things" can you represent?
- Need N binary digits to represent $n$ things, where $2^{\mathrm{N}} \geq n$
- Example: 5 binary digits for alphabet because $2^{5}=32>26$
* A binary digit is known as a bit
* A group of 4 bits (1 hex digit) is called a nibble
* A group of 8 bits ( 2 hex digits) is called a byte
- 1 bit $\rightarrow 2$ things, 1 nibble $\rightarrow 16$ things, 1 byte $\rightarrow 256$ things

## So What's It Mean?

* A sequence of bits can have many meanings!
* Consider the hex sequence 0x4E6F21.
- Common interpretations include:
- The decimal number 5140257
- The characters "No!"
- The background color of this slide
- The real number $7.203034 \times 10^{-39}$
* It is up to the program/programmer to decide how to the sequence of bits

## Binary Encoding - Colors

24b,t coler

* RGB - Red, Green, Blue
- Additive color model (light): byte (8 bits) for each color
- Commonly seen in hex (in HTML, photo editing, etc.)
- Examples: Blue $\rightarrow 0 \times 0000$ FF, Gold $\rightarrow 0 x F F D 700$, WhRite $\rightarrow 0 x F F F F F F$, Deep Pink $\rightarrow 0 x F F 1493$

## Binary Encoding - Characters/Text

## ASCII Encoding (www.asciitable.com)

- American Standard Code for Information Interchange

## Binary Encoding - Files and Programs

* At the lowest level, all digital data is stored as bits!
* Layers of abstraction keep everything comprehensible
- Data/files are groups of bits interpreted by program
- Program is actually groups of bits being interpreted by your CPU

## Summary

* Humans think about numbers in decimal; computers think about numbers in binary
- Base conversion to go between them
- Hexadecimal is more human-readable than binary
* All information on a computer is binary
* Binary encoding can represent anything!
- Computer/program needs to know how to interpret the bits
