

# The Hardware/Software Interface

CSE 351 Winter 2021

## Instructor:

Mark Wyse

## Teaching Assistants:

Kyrie Dowling

Catherine Guevara

Ian Hsiao

Jim Limprasert

Armin Magness

Allie Pfleger

Cosmo Wang

Ronald Widjaja

AN x64 PROCESSOR IS SCREAMING ALONG AT BILLIONS OF CYCLES PER SECOND TO RUN THE XNU KERNEL, WHICH IS FRANTICALLY WORKING THROUGH ALL THE POSIX-SPECIFIED ABSTRACTION TO CREATE THE DARWIN SYSTEM UNDERLYING OS X, WHICH IN TURN IS STRAINING ITSELF TO RUN FIREFOX AND ITS GECKO RENDERER, WHICH CREATES A FLASH OBJECT WHICH RENDERS DOZENS OF VIDEO FRAMES EVERY SECOND

BECAUSE I WANTED TO SEE A CAT JUMP INTO A BOX AND FALL OVER.

I AM A GOD.

# Lesson Outline

## ❖ Course Introduction

- <https://courses.cs.washington.edu/courses/cse351/21wi/>

## ❖ Course Policies

- Remote Instruction

# Introductions: Course Staff

- ❖ Your Instructor: just call me Mark
  - (no Prof., Dr., Mr., or any other honorific, please)
  - CSE PhD student, Computer Architecture
  - Washingtonian
  - Food lover and cooking enthusiast
  - Video/board game enthusiast
  
- ❖ Teaching 351 for the second time
  - Instructor in Wi18
  - TA'd in Wi13, Wi14, and Su14 (Coursera offering)
  - Have also TA'd CSE 352, 467, 471, CSEP 548

# Introductions: Course Staff

## ❖ Teaching Assistants

- Available in section, office hours, and on Ed Discussion
- An invaluable source of information and help
  - They have been in your seat
  - They know the material and assignments well
  - They are eager to help you!

## ❖ Get to know us

- We are all here to help you succeed!

# Who are You?

- ❖ ~ 105 students registered, single lecture
- ❖ CSE majors, EE majors, and more
  - Most of you will find almost everything in the course new
  - Many of you are new to CSE and/or UW (for 2020-2021)
- ❖ Get to know each other and help each other out!
  - Learning is much more fun with friends
  - Working well with others is a valuable life skill
  - Diversity of perspectives expands your horizons
  - A lot of work this quarter is expected to be done in groups

# Welcome to CSE351!

```
1000001101111100001001000001110000000000
0111010000011000
10001011010001000010010000010100
```

```
1000100111000010

11110111011111000010010000011100
```

A diagram showing a large blue double-headed arrow pointing left and right. The text "HW/SW Interface" is written diagonally across the arrow in a bold, black, sans-serif font.

- ❖ Our goal is to teach you the key abstractions “under the hood”
  - How does your source code become something that your computer understands?
  - What happens as your computer is executing one or more processes?

# Welcome to CSE351!

```

❖ This is an *introduction* that will:

- Profoundly change/augment your view of computers and programs
- Leave you impressed that computers ever work

# Code in Many Forms

```
if (x != 0) y = (y+z)/x;
```

Compiler

```
cmpl    $0, -4(%ebp)
je      .L2
movl    -12(%ebp), %eax
movl    -8(%ebp), %edx
leal    (%edx,%eax), %eax
movl    %eax, %edx
sarl    $31, %edx
idivl   -4(%ebp)
movl    %eax, -8(%ebp)
.L2:
```

Assembler

```
1000001101111100001001000001110000000000
0111010000011000

```

High Level Language  
(*e.g.*, C, Java)

Assembly Language

Machine Code

# Roadmap

How does your source code become something that your computer understands?

C:

```
car *c = malloc(sizeof(car));
c->miles = 100;
c->gals = 17;
float mpg = get_mpg(c);
free(c);
```

Java:

```
Car c = new Car();
c.setMiles(100);
c.setGals(17);
float mpg =
    c.getMPG();
```

Assembly language:

```
get_mpg:
    pushq    %rbp
    movq     %rsp, %rbp
    ...
    popq     %rbp
    ret
```

Machine code:

```
0111010000011000
100011010000010000000010
1000100111000010
110000011111101000011111
```

Computer system:

Memory & data  
Integers & floats  
x86 assembly  
Procedures & stacks  
Executables  
Arrays & structs  
Memory & caches  
Processes  
Virtual memory  
Memory allocation  
Java vs. C

OS:

OS X Yosemite

# Roadmap

What happens as your computer is executing one or more processes?

C:

```
car *c = malloc(sizeof(car));
c->miles = 100;
c->gals = 17;
float mpg = get_mpg(c);
free(c);
```

Java:

```
Car c = new Car();
c.setMiles(100);
c.setGals(17);
float mpg =
    c.getMPG();
```

Memory & data  
Integers & floats  
x86 assembly  
Procedures & stacks  
Executables  
Arrays & structs  
Memory & caches  
Processes  
Virtual memory  
Memory allocation  
Java vs. C

Assembly  
language:

```
get_mpg:
    pushq    %rbp
    movq     %rsp, %rbp
    ...
    popq     %rbp
    ret
```

Machine  
code:

```
0111010000011000
100011010000010000000010
1000100111000010
110000011111101000011111
```

# Some fun topics that we will touch on

- ❖ Which of the following seems the most interesting to you? (vote on Ed Lessons)
  - a) What is a GFLOP and why is it used in computer benchmarks?
  - b) How and why does running many programs for a long time eat into your memory (RAM)?
  - c) What is stack overflow and how does it happen?
  - d) Why does your computer slow down when you run out of *disk* space?
  - e) What was the flaw behind the original Internet worm, the Heartbleed bug, and the Cloudblood bug?
  - f) What is the meaning behind the different CPU specifications? (e.g. # of cores, # and size of cache, supported memory types)

# Lesson Outline

- ❖ Course Introduction

- <https://courses.cs.washington.edu/courses/cse351/21wi/>

- ❖ **Course Policies**

- Remote Instruction

# Bookmarks

- ❖ Website: <https://courses.cs.washington.edu/courses/cse351/21wi/>
  - Schedule, policies, materials, videos, assignments, etc.
- ❖ Discussion: <https://us.edstem.org/courses/3020/discussion/>
  - Announcements made here
  - Ask and answer questions – staff will monitor and contribute
- ❖ Lessons: <https://us.edstem.org/courses/3020/lessons/>
- ❖ Gradescope: <https://www.gradescope.com/courses/208347>
  - Lab submissions
- ❖ Canvas: <https://canvas.uw.edu/courses/1432121>
  - Calendar (zoom links), gradebook

# My Goals for the Course (and you)

- ❖ Create a welcoming, inclusive, and supportive learning environment for everyone
  - concerns? *Reach out!* (staff, anonymous, CSE advising, etc.)
- ❖ Enhance your understanding of fundamental topics related to the HW/SW interface
- ❖ Every student takes away one useful concept, technique, idea, etc.
- ❖ 3 Simple rules for our course:
  - Respect one another
  - Ask questions
  - Have fun!

# 351 Remote Instruction

- ❖ All meetings (lecture, section, office hours) via **Zoom**
  - Sign in to [washington.zoom.us](https://washington.zoom.us) with “Login with SSO”
  - Find Zoom URLs via Canvas Calendar
  - Lectures and section presentations will be recorded
  - If your connection supports it, we would love to see your face (video on), but not required – highly recommend turning on camera during small group work and office hours
  - Watch your audio – background noise can be disruptive
- ❖ Practice task: turn on your mic  and say “hello!”
- ❖ Practice task: turn on your camera  and wave!
  - You may turn off your camera afterwards

# 351 Remote Instruction

- ❖ This class is highly *conceptual* and meant to be digested gradually
  - **Readings** (and quizzes) need to be done before lecture
  - **Lectures** will include practice problems and homework time
  - **Homework** following most lectures, due 1-2 lectures later
- ❖ Questions
  - Before and during lecture, there will be a monitored lecture discussion post
  - During group work, questions should be asked verbally or via chat (TAs will circulate through groups)
- ❖ Practice task: open the Group Chat  and type your favorite ice cream flavor

# 351 Remote Instruction

- ❖ Group work will be emphasized in this class
  - Lecture and section will use breakout rooms – you will get the most out of it if you actively participate!
  - Many assignments allow collaboration – talking to classmates will help you synthesize concepts and terminology
  - Self-select into small groups on Canvas
    - (<https://canvas.uw.edu/courses/1432121/groups#tab-114464>)
    - If you are not part of a group on Canvas, then I will randomly assign you to one each lecture
    - You can freely change groups throughout the quarter
  - Responsibility for learning falls on you

# 351 Remote Instruction

- ❖ Extenuating circumstances
  - Students (and staff) are in an extremely varied set of circumstances currently and we are cognizant of that
  - For formal accommodations, go through Disability Resources for Students (DRS)
  - We will try to be accommodating otherwise, but the earlier you reach out, the better
- ❖ Don't suffer in silence – talk to a staff member!

# Reference Material

## ❖ *Computer Systems: A Programmer's Perspective*

- Randal E. Bryant and David R. O'Hallaron

- Website: <http://csapp.cs.cmu.edu>

  - see site for changes and errata

- North American 3rd edition

- Optional, additional readings

## ❖ A good C book (or online reference)

- *The C Programming Language* (Kernighan and Ritchie)

- *C: A Reference Manual* (Harbison and Steele)

- <https://www.cplusplus.com>

# Workload

- ❖ **Readings** (~5%)  *gap work is okay*
  - one attempt per question (completeness)
- ❖ **Homework** (~15-20%) 
  - unlimited submission attempts (autograded correctness)
- ❖ **Labs** (~35-40%)  *individual*
  - last submission graded (correctness)
- ❖ **Section Worksheets** (~5%) 
  - single submission (completeness)
- ❖ **Study Guides** (~30%) 
  - Cumulative learning assessments
- ❖ **EPA: Effort, Participation, and Altruism** (~5%)
  - engagement in course and discussion, in-lesson polls

# Lab Collaboration and Academic Integrity

- ❖ All submissions are expected to be yours and yours alone
- ❖ You are encouraged to discuss your assignments with other students (*ideas*), but we expect that what you turn in is yours
- ❖ It is NOT acceptable to copy solutions from other students or to copy (or start your) solutions from the Web (including Github)
- ❖ Our goal is that **\*YOU\*** learn the material

# EPA

- ❖ Encourage class-wide learning!
- ❖ Effort
  - Attending office hours, completing all assignments
  - Keeping up with Ed Discussion activity
- ❖ Participation
  - Making the class more interactive
  - Lecture question voting
- ❖ Altruism
  - Helping others in section, office hours, and on Ed Discussion

# To-Do List

## ❖ Admin

- Explore/read website *thoroughly*
- Check that you can access Ed Discussion and Lessons
- **Get your machine set up to access the CSE Linux environment (CSE VM or attu) *as soon as possible***
- Optionally (but encouraged!), sign up for CSE 391

## ❖ Assignments

- Pre-Course Survey and hw0 due Wednesday (1/6)
- hw1 and Lab 0 due Friday (1/8)

# Tips for Success in 351

- ❖ Read the syllabus/policies page on the website!
- ❖ Attend all lessons and sections
  - Engage and ask questions during class time
- ❖ **Learn by doing**
  - Can answer many questions by writing small programs
- ❖ Visit Ed Discussion often
  - Ask questions and try to answer fellow students' questions
- ❖ Go to office hours
  - Even if you don't have specific questions in mind
- ❖ Find a study and homework group
- ❖ Start assignments early
- ❖ **Don't be afraid to ask questions**

# Unix Tools

- ❖ Consider taking CSE 391 Unix Tools, 1 credit
  - Useful skills to know and relevant to this course
  - Available to all CSE majors and anyone **registered** in CSE351
  - If you are interested in taking, attend the first lecture!!

# Due Dates and Late Work Policy

## ❖ Homework, Readings, Section Worksheets

- No late days/submissions.

## ❖ Labs

- **5 late day tokens**
- May use up to 2 tokens per Lab
- Lab submission closes 2 late days past due date
- Late day = 24 hours, except weekends (Saturday + Sunday) count as a single late day
- After all 5 tokens have been used, late labs incur 20% penalty per late day

## ❖ Exceptions and extensions:

- Contact the course staff to discuss, but do not wait until the due date to reach out!
