

# The Hardware/Software Interface

CSE 351, Winter 2022

## Instructor:

Sam Wolfson

## Teaching Assistants:

Angela Xu

Anirudh Kumar

Catherine Guevara

Dara Stotland

Nick Durand

Harrison Bay

Ian Hsiao

Mara Kirdani-Ryan

Sanjana Sridhar

AN x64 PROCESSOR IS SCREAMING ALONG AT BILLIONS OF CYCLES PER SECOND TO RUN THE XNU KERNEL, WHICH IS FRANTICALLY WORKING THROUGH ALL THE POSIX-SPECIFIED ABSTRACTION TO CREATE THE DARWIN SYSTEM UNDERLYING OS X, WHICH IN TURN IS STRAINING ITSELF TO RUN FIREFOX AND ITS GECKO RENDERER, WHICH CREATES A FLASH OBJECT WHICH RENDERS DOZENS OF VIDEO FRAMES EVERY SECOND

BECAUSE I WANTED TO SEE A CAT JUMP INTO A BOX AND FALL OVER.

I AM A GOD.

# Lecture Outline

## ❖ Course Introduction

## ❖ Course Policies

- <https://courses.cs.washington.edu/courses/cse351/22wi/syllabus>
- Binary and Numerical Representation

# Introductions: Course Staff

## ❖ Instructor: Sam Wolfson

- This is my 2<sup>nd</sup> time teaching CSE 351
- I graduated with a master's degree from UW CSE in 2020
- Very excited to be teaching again!

## ❖ TAs:

- Available in section, office hours, and on Ed Discussion
- ❖ More than anything, we want you to feel...
  - ✓ Comfortable and welcome in this space
  - ✓ Able to learn and succeed in this course
  - ✓ Comfortable reaching out if you need help or want change

# Introductions: You!

- ❖ ~140 students registered!
- ❖ CSE majors, ECE majors, and more
  - Most of you will find almost everything in the course new
  - Many of you are new to CSE and/or UW!
- ❖ Get to know each other! Help each other out!
  - Science says that learning happens best in groups
  - Working well with others is a valuable life skill
  - Diversity of perspectives expands your horizons
  - Take advantage of group work, where permissible, to *learn*, not just get a grade

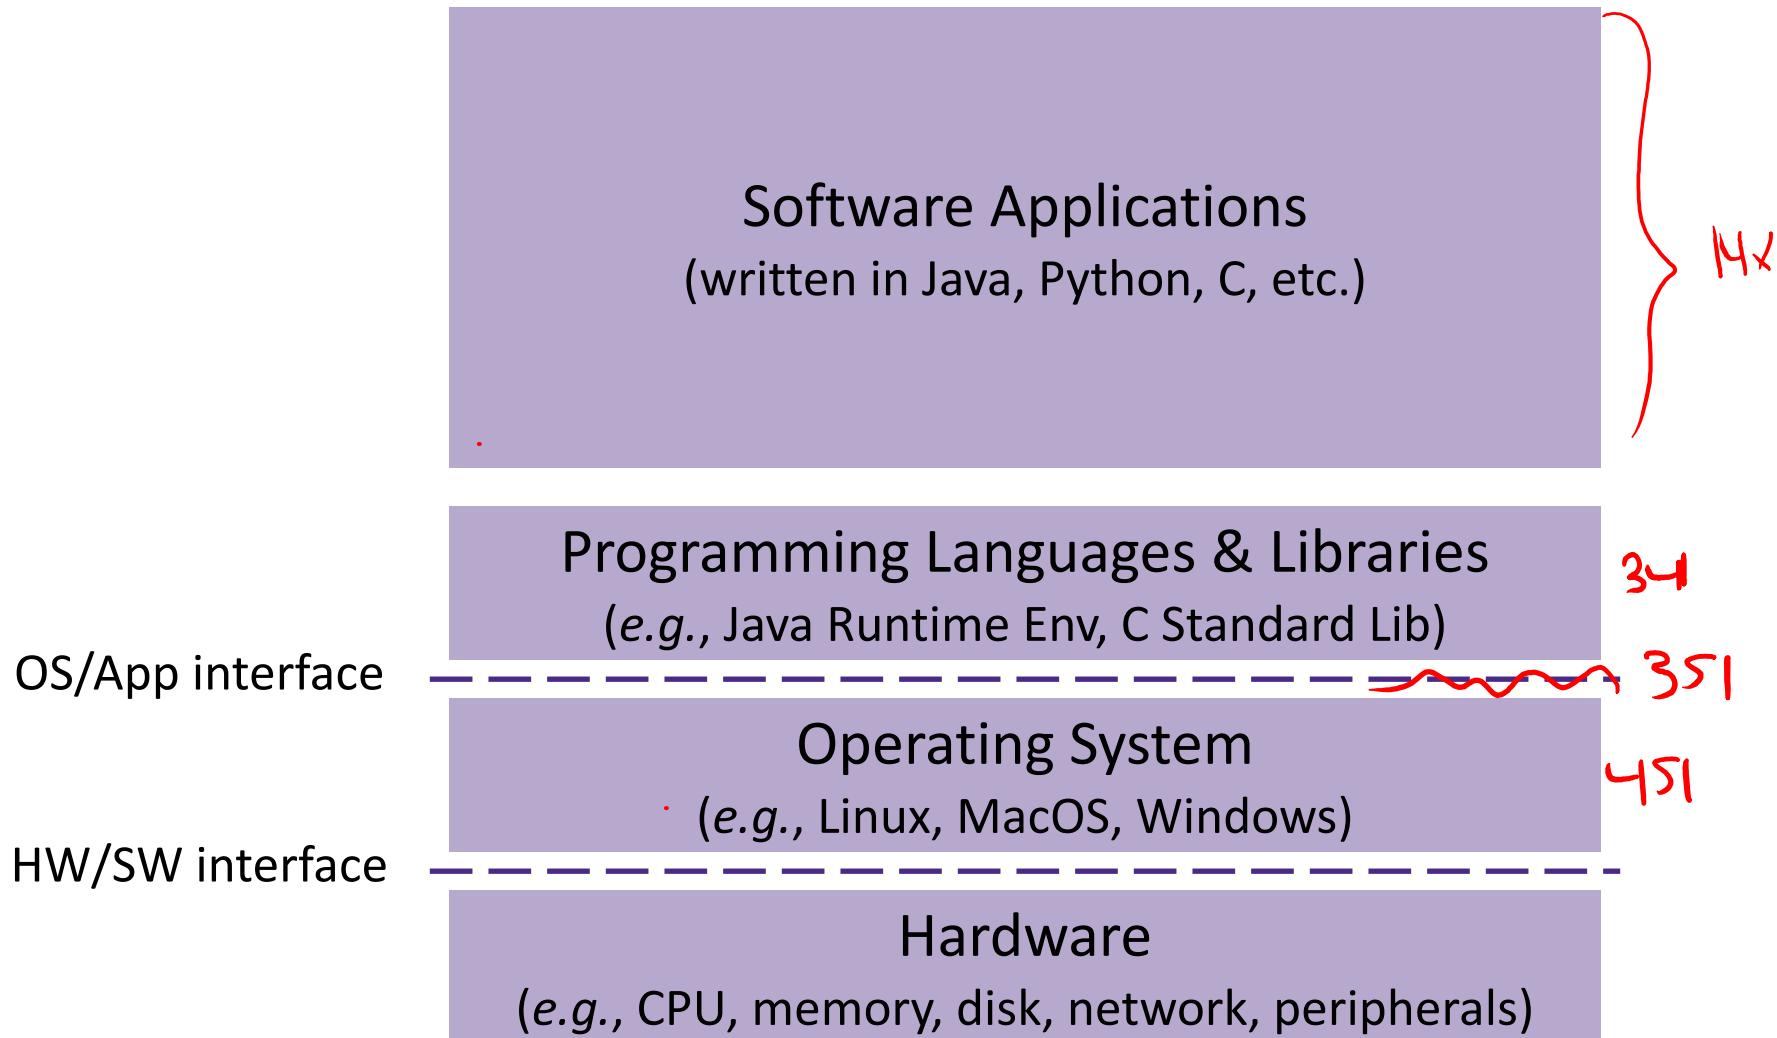

# Welcome to CSE 351!

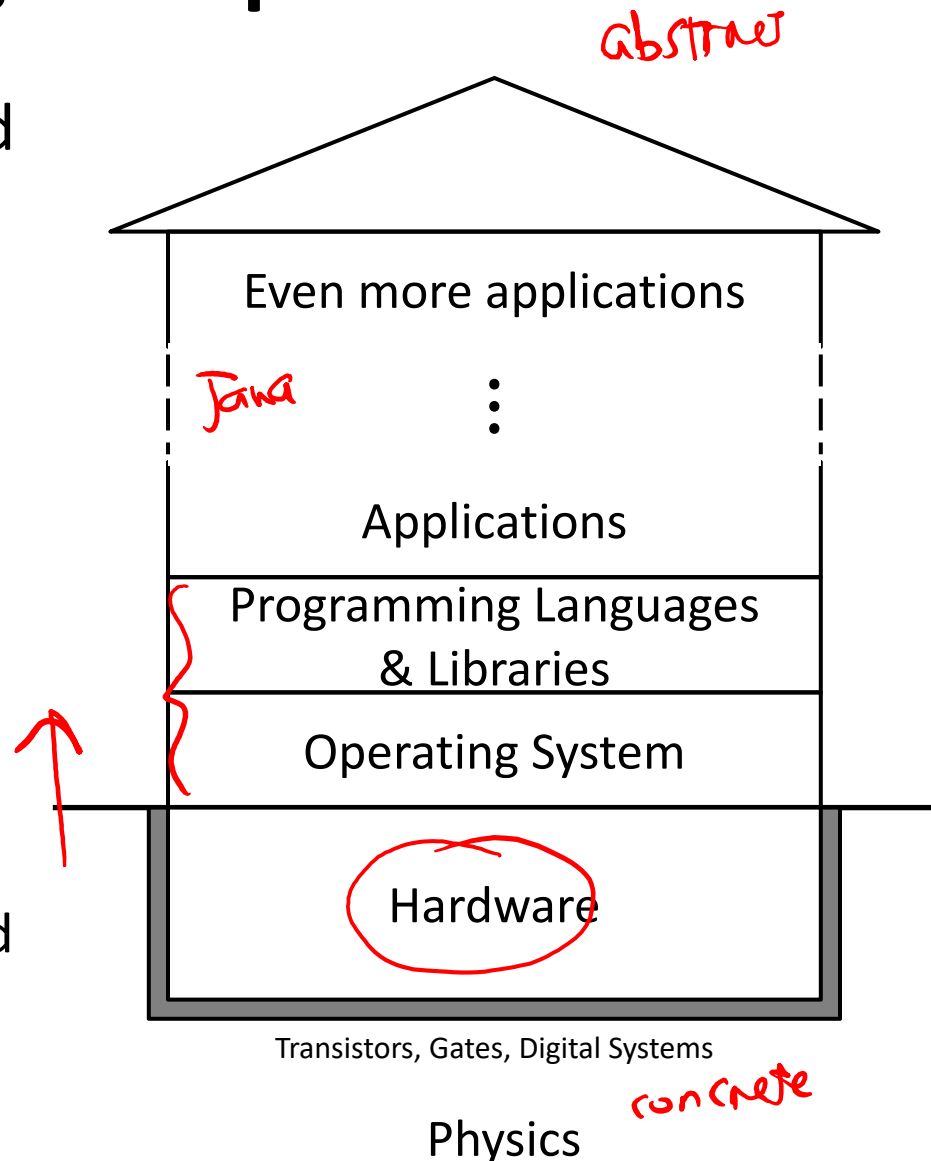

- ❖ See the key abstractions “under the hood” to describe “what really happens” when a program runs
  - How is it that “everything is 1s and 0s”?
  - Where does all the data get stored and how do you find it?
  - How can more than one program run at once?
  - How does your source code become something that your computer understands?
- ❖ *An introduction that will:*
  - Profoundly change/augment your view of computers and programs
  - Connect your source code down to the hardware
  - Leave you impressed that computers ever work
  - Help you understand the values that have informed the history of computing, and how you can think critically about them

# Layers of Computing Below Programming

# “House” of Computing Metaphor

- ❖ We continue to build upward but everything relies on the base & foundation
  - We’ll explore parts of Hardware, OS, and PL
- ❖ Built a long time ago
  - Some parts have been updated over the years, some have not
  - More remodeling necessary, but should understand *how* and *why* things are this way before demolishing anything

# The Hardware/Software Interface

## ❖ Topic Group 1: **Data**

- Memory, Data, Integers, Floating Point, Arrays, Structs

## ❖ Topic Group 2: **Programs** *a specific kind of data*

- x86-64 Assembly, Procedures, Stacks, Executables

## ❖ Topic Group 3: **Scale & Coherence**

- Caches, Processes, Virtual Memory, Memory Allocation

## ❖ Learning in this class

- You might miss Java, but we just ask you to keep your heart open; something unexpected might pique your interest!
- Notice and nurture any wants to linger in some space
  - Many future classes to explore this space more

# Some fun topics that we will touch on

🌐 When poll is active, respond at [pollev.com/wolfson](https://pollev.com/wolfson)

📱 Text **WOLFSON** to **22333** once to join

# Lecture Outline

- ❖ Course Introduction
- ❖ **Course Policies**
  - <https://courses.cs.washington.edu/courses/cse351/22wi/syllabus>
- ❖ Binary and Numerical Representation

# Bookmarks

- ❖ Website: <https://courses.cs.washington.edu/courses/cse351/22wi/>
  - Schedule, policies, materials, videos, assignment specs, etc.
- ❖ Ed Course: <https://edstem.org/us/courses/16207>
  - Discussion: announcements, ask and answer questions
  - Lessons: readings, lecture questions, homework
  - Resources: links to other tools and information
- ❖ Linked from website and Ed
  - Canvas: gradebook, Zoom links
  - Gradescope: lab submissions
  - Panopto: lecture recordings

# Virtual Instruction (This Week)

- ❖ All lectures, sections, and office hours will take place via Zoom. Links are provided on the course website, under “Tools” or the Zoom tab within Canvas.
- ❖ Find scheduled office hours on the course calendar 🖐️

Sun 1/2	Mon 1/3	Tue 1/4	Wed 1/5	Thu 1/6	Fri 1/7	Sat 1/8
	<b>11:15a</b> Binary Reading Due	<b>11a - 12p</b> Office Hours Nick 3rd Floor Breakout	<b>11:15a</b> Memory & Data I Reading Due (not yet open)	<b>8:30a - 9:20a (AA)</b> Section 1 Binary, Programming in C MUE 154	<b>11:15a</b> Memory & Data II Reading Due (not yet open)	
	<b>11:30a - 12:20p</b> Lecture Introduction, Binary CSE2 G20	<b>2p - 3p</b> Office Hours Dara 3rd Floor Breakout	<b>11:30a - 12:20p</b> Lecture Memory & Data I CSE2 G20	<b>9:30a - 10:20a (AB)</b> MEB 242	<b>11:30a - 12:20p</b> Lecture Memory & Data II CSE2 G20

			<b>11:59p</b> Course Policies Homework Due	<b>3p - 4p</b> Office Hours Angela, Nick 3rd Floor Breakout	<b>11:59p</b> Binary Homework Due (not yet open)	
				<b>7p - 8p</b> Office Hours Zoom		

- ❖ The locations of office hours are for next week and beyond, please ignore them for this week.

# Extenuating Circumstances

- ❖ Students (and staff) still face an extremely varied set of environments and circumstances
- ❖ For formal accommodations, go through Disability Resources for Students (DRS)
- ❖ We will try to be accommodating otherwise, but the earlier you reach out, the better
- ❖ Don't suffer in silence – talk to a staff member!
  - We have a 1-on-1 meeting request form

# Inclusiveness

- ❖ It is very important to us that you have a positive experience in CSE 351 this quarter.
- ❖ If at any point you are made to feel uncomfortable, disrespected, or excluded by a staff member or student, please let us know.
  - You may talk with a staff member, email me directly, or send anonymous feedback (via the “Tools” menu on the website).

# Grading

- ❖ **Pre-Lecture Readings: 5%**  *11:15 am groups OK*
  - Can reveal solution after one attempt (completion)
- ❖ **Homework: 20% total**  *groups*
  - Unlimited submission attempts (autograded correctness)
- ❖ **Labs: 40% total**  *partners*
  - Last submission graded (correctness)
- ❖ **Exams: Midterm (16%) and Final (16%)** 
  - Exact format TBD; individual
  - If in person, accommodations/makeups will be given
- ❖ **EPA:** Effort, Participation, and Altruism (3%)

# Group Work in 351

- ❖ Group work will be *emphasized* in this class
  - Lecture and section will have built-in group work time
    - you will get the most out of it if you actively participate!
      - In Zoom: TAs and I will monitor chat
      - In-person: TAs will circle around the room and interact with groups
        - Raise your hand to get the attention of a staff member
  - Most assignments allow collaboration – talking to classmates will help you synthesize concepts and terminology
    - *The major takeaways for this course will be the ability to explain the major concepts verbally and/or in writing to others*
  - However, the responsibility for learning falls on you

# Lab Collaboration and Academic Integrity

- ❖ All submissions are expected to be yours and yours alone
- ❖ You are encouraged to discuss your assignments with other students (*ideas*), but we expect that what you turn in is yours
- ❖ It is NOT acceptable to copy solutions from other students or to copy (or start your) solutions from the Web (including GitHub, Chegg, and similar sites)
- ❖ Our goal is that **you** learn the material so you will be prepared for exams, interviews, and the future

# To-Do List

## ❖ Admin

- Explore/read the course website *thoroughly*
- Check that you can access Ed Discussion & Lessons
- **Get your machine set up to access the CSE Linux environment (CSE VM or attu) *as soon as possible***
- Optionally, sign up for CSE 391: System and Software Tools

## ❖ Assignments

- Course Policies due Wednesday (1/5)
- Pre-Course Survey and Binary Homework due Friday (1/7)
- Pre-lecture readings due before each lecture – 11:15 am
  - Optional Computer Systems reading given on course calendar
- Lab 0 due next Monday (1/10)

# Lecture Outline

- ❖ Course Introduction
- ❖ Course Policies
  - <https://courses.cs.washington.edu/courses/cse351/22wi/syllabus/>
- ❖ **Binary and Numerical Representation**

# Reading Review

## ❖ Terminology:

- numeral, digit, base, symbol, digit position, leading zeros
- binary, bit, nibble (nybble?), byte, hexadecimal
- numerical representation, encoding scheme

## ❖ Questions from the reading?

# Review Questions

- ❖ What is the *decimal value* of the numeral 107<sub>8</sub>?

**A. 71**  $1 \times 8^2 + 0 \times 8^1 + 7 \times 8^0$   
 $64 + 0 + 7 = 71$

B. 87

C. 107

D. 568

- ❖ Represent 0b100110110101101 in hex.
- $0b100110110101101$   
 7 D A D  
 0x7DAD

- ❖ What is the decimal number 108 in hex?

**A. 0x6C**  $\begin{cases} 16^0 = 1 \\ 16^1 = 16 \\ 16^2 = 256 \end{cases}$   
 B. 0xA8  
 C. ~~0x108~~  
 D. ~~0x612~~  
 $108 / 16 = 6 \dots$   
 $96 + 12$   
 0x6C

- ❖ Represent 0x3C9 in binary.

0b0011 1100 1001

# Base Comparison

- ❖ Why does all this matter?
  - *Humans* think about numbers in **base 10**, but *computers* “think” about numbers in **base 2**
  - **Binary encoding** is what allows computers to do all the amazing things that they do!
- ❖ You should have this table memorized by the end of the class
  - Might as well start now 😊

Base 10	Base 2	Base 16
0	0000	0
1	0001	1
2	0010	2
3	0011	3
4	0100	4
5	0101	5
6	0110	6
7	0111	7
8	1000	8
9	1001	9
10	1010	A
11	1011	B
12	1100	C
13	1101	D
14	1110	E
15	1111	F

# Numerical Encoding

## ❖ AMAZING FACT: You can represent *anything* countable using numbers!

- Need to agree on an **encoding**
- Kind of like learning a new language

chat → to talk  
cat

## ❖ Examples:

- Decimal Integers:  $0 \rightarrow 0b0$ ,  $1 \rightarrow 0b1$ ,  $2 \rightarrow 0b10$ , etc.
- English Letters: CSE  $\rightarrow$  0x435345, yay  $\rightarrow$  0x796179
- Emoticons: 😊 0x0, 😞 0x1, 😎 0x2, 😇 0x3, 😈 0x4, 🙋 0x5

# Binary Encoding

0b0 "thing 1"  
 0b1 "thing 2"  
 0b00  
 01  
 10  
 11  
 4 things

❖ With  $n$  binary digits, how many “things” can you represent?

$2^n$

- Need  $n$  binary digits to represent  $N$  things, where  $2^n \geq N$
- Example: 5 binary digits for alphabet because  $2^5 = 32 > 26$

$2^4 = 16$  (not enough)

- ❖ A binary digit is known as a **bit**
- ❖ A group of 4 bits (1 hex digit) is called a **nibble** (nybble?)
- ❖ A group of 8 bits (2 hex digits) is called a **byte**
  - 1 bit  $\rightarrow$  2 things, 1 nibble  $\rightarrow$  16 things, 1 byte  $\rightarrow$  256 things

# So, What Does It Mean?

- ❖ *A sequence of bits can have many meanings!*
- ❖ Consider the hex sequence 0x4E6F21
  - Common interpretations include:
    - The decimal number 5,140,257
    - The real number  $7.203034 \times 10^{-39}$
    - The characters “No!”
    - The background color of this slide
- ❖ It is up to the program/programmer (you!) to decide how to **interpret** the sequence of bits

# Binary Encoding – Characters/Text

## ❖ ASCII Encoding ([www.asciitable.com](http://www.asciitable.com))

### ■ American Standard Code for Information Interchange

# Binary Encoding – Characters/Text

- ❖ ASCII Encoding ([www.asciitable.com](http://www.asciitable.com))
  - *American* Standard Code for Information Interchange
- ❖ Created in 1963
  - Memory was expensive, 32KB in brand new machines
  - *Economic incentive* to use fewer bits for encoding
- ❖ **Design Goals:**
  - Represent everything on an *American* typewriter as *efficiently* as possible
  - Organize similar characters together
    - Numbers, uppercase, lowercase, then other stuff

# Binary Encoding – Unicode & Emoji

- ❖ Unicode Standard is managed by the Unicode Consortium
  - “Universal language” that uses 1-4 bytes to represent a much larger range of characters/languages, including emoji
  - Adds new emojis every year
    - Offer opportunities to be more inclusive of race and gender diversity
    - However, adoption often lags: 🤴 and 👑 added in 2015 and 2016, but non-gendered “person with crown” only added in 2021: 🧑👑
    - <https://emojipedia.org/new/>
- ❖ Emojipedia demo: <http://www.emojipedia.org>
  - Desktop Computer: 
  - Code points: U+1F5A5, U+FE0F
  - Display:       

# Binary Encoding – Colors

## ❖ RGB – Red, Green, Blue

- Additive color model (light): byte (8 bits) for each color
- Commonly seen in hex (in HTML, photo editing, etc.)
- Examples: **Blue**→0x0000FF, **Gold**→0xFFD700,  
**White**→0xFFFFFF, **Deep Pink**→0xFF1493

# Binary Encoding – Files and Programs

- ❖ At the lowest level, all digital data is stored as bits!
- ❖ Layers of abstraction keep everything comprehensible
  - Data/files are groups of bits interpreted by program
  - Program is groups of bits being interpreted by your CPU
- ❖ Computer Memory Demo (if time)
  - From vim: `%!xxd`
  - From emacs: `M-x hexl-mode`

# Summary

- ❖ Humans think about numbers in decimal; computers think about numbers in binary
  - Base conversion to go between them
  - Hexadecimal is more human-readable than binary
- ❖ All information on a computer is binary
- ❖ Binary encoding can represent *anything*!
  - Computer/program needs to know how to interpret the bits
  - Encodings aren't "neutral"; priorities are baked in
