

Introduction

CSE 373
Data Structures
Winter 2007

Staff

- Instructor
 - › Hal Perkins (perkins at cs.washington.edu)
- TA
 - › Tian Sang (sang at cs.washington.edu)
- Email is particularly good for short questions, setting up appointments, topics not suitable for class discussion list. Not so good for program debugging, grading questions, ...

1/2/2007

CSE 373 Wi 07 - Introduction

2

Web Page

- All info is on the web page for CSE 373
(or at least will be once things are a bit further along...)
 - › <http://www.cs.washington.edu/373>
 - › also known as
<http://www.cs.washington.edu/education/courses/373/07wi>
- Look there for schedules, contact information, assignments, links to discussion boards and mailing lists, etc.

1/2/2007

CSE 373 Wi 07 - Introduction

3

Office Hours

- Hal Perkins – 548 CSE (Allen Center)
 - › M after class + appointments
- Tian Sang – tba

1/2/2007

CSE 373 Wi 07 - Introduction

4

CSE 373 E-mail List

- If you are registered for the course you will be automatically registered. Otherwise, subscribe by going to the class web page
- E-mail list is used for posting important announcements by instructor and TAs
 - › You are responsible for anything sent here

1/2/2007

CSE 373 Wi 07 - Introduction

5

CSE 373 Discussion Board

- The course will have a Catalyst e-post message board
- Use
 - › General discussion of class contents
 - › Hints and ideas about assignments (but **not** detailed code or solutions)
 - › Other topics related to the course

1/2/2007

CSE 373 Wi 07 - Introduction

6

Computer Lab

- Math Sciences Computer Center
 - › <http://www.ms.washington.edu/>
- Programming language: Java 5
 - › Java 6 is also fine
 - › Java 1.4 is ok for some things, but we will use generics which were introduced in Java 5.0

1/2/2007

CSE 373 Wi 07 - Introduction

7

Programming Tools

- Eclipse, DrJava, Textpad, whatever...
 - › Also may need JavaDoc, JUnit, which are easy to access from most tools
- We're not religious about this as long as your code is standard Java
 - › But stay away from code-generating "wizards"
- Sun Java for Windows/Linux, Java 5 for OS X, and most tools are freely available on the web – easy to set up at home

1/2/2007

CSE 373 Wi 07 - Introduction

8

Textbook

- *Data Structures and Algorithm Analysis in Java*, Mark Weiss, 2nd edition, Addison-Wesley, 2007.

1/2/2007

CSE 373 Wi 07 - Introduction

9

Grading

Estimated Breakdown:

- Midterms 30% (15% each)
- Final 20%
 - › 2:30-4:20 pm, Tuesday, March 13
- Assignments 50%
 - › Weights may differ to account for relative difficulty of assignments
 - › Assignments will be a mix of shorter written exercises and longer programming projects

1/2/2007

CSE 373 Wi 07 - Introduction

10

Deadlines & Late Policy

- Assignments generally due Thursday evenings via the web
 - › Exact times and dates will be given for each assignment
- Late policy: NONE
 - › As in, no late assignments accepted (Talk to the instructor if something truly outside your control causes problems here)

1/2/2007

CSE 373 Wi 07 - Introduction

11

Academic (Mis-)Conduct

- You are expected to do your own work
 - › Exceptions (group work), if any, will be clearly announced
- Sharing solutions, doing work for or accepting work from others will be penalized
- Integrity is a fundamental principle in the academic world (and elsewhere) – we and your classmates trust you; don't abuse that trust

1/2/2007

CSE 373 Wi 07 - Introduction

12

Class Overview

- Introduction to many of the basic data structures used in computer software
 - › Understand the data structures
 - › Analyze the algorithms that use them
 - › Know when to apply them
- Practice design and analysis of data structures.
- Practice using these data structures by writing programs.
- Data structures are the plumbing and wiring of programs.

1/2/2007

CSE 373 Wi 07 - Introduction

13

Goal

- You will understand
 - › what the tools are for storing and processing common data types
 - › which tools are appropriate for which need
- So that you will be able to
 - › make good design choices as a developer, project manager, or system customer

1/2/2007

CSE 373 Wi 07 - Introduction

14

Course Topics

- Introduction to Algorithm Analysis
- Lists, Stacks, Queues (mostly review)
- Search Algorithms and Trees – particularly balanced trees
- Hashing and Heaps, Dictionaries
- Sorting
- Disjoint Sets
- Graph Algorithms

1/2/2007

CSE 373 Wi 07 - Introduction

15

Background

- Prerequisite is CSE 143
- Topics you should have a basic understanding of:
 - › Variables, conditionals, loops, methods (functions), fundamentals of defining classes and inheritance, arrays, single linked lists, simple binary trees, recursion, some sorting and searching algorithms, basic algorithm analysis (e.g., $O(n)$ vs $O(n^2)$ and similar things)
- We can fill in gaps as needed, but if any topics are new, plan on some extra studying

1/2/2007

CSE 373 Wi 07 - Introduction

16

Data Structures: What?

- Need to organize program data according to problem being solved
- **Abstract Data Type (ADT)** - A data object and a set of operations for manipulating it
 - › List ADT with operations `insert` and `delete`
 - › Stack ADT with operations `push` and `pop`
- Note similarity to Java classes
 - › private data structure and public methods

1/2/2007

CSE 373 Wi 07 - Introduction

17

Data Structures: Why?

- Program design depends crucially on how data is structured for use by the program
 - › Implementation of some operations may become easier or harder
 - › Speed of program may dramatically decrease or increase
 - › Memory used may increase or decrease
 - › Debugging may become easier or harder

1/2/2007

CSE 373 Wi 07 - Introduction

18

Terminology

- Abstract Data Type (ADT)
 - › Mathematical description of an object with set of operations on the object. Useful building block.
- Algorithm
 - › A high level, language independent, description of a step-by-step process
- Data structure
 - › A specific family of algorithms for implementing an abstract data type.
- Implementation of data structure
 - › A specific implementation in a specific language

1/2/2007

CSE 373 Wi 07 - Introduction

19

Algorithm Analysis: Why?

- Correctness:
 - › Does the algorithm do what is intended.
- Performance:
 - › What is the running time of the algorithm.
 - (In terms of what?)
 - › How much storage does it consume.
- Different algorithms may correctly solve a given task
 - › Which should we use? When?

1/2/2007

CSE 373 Wi 07 - Introduction

20

Iterative Algorithm for Sum

- Find the sum of the first **num** integers stored in an array **v**.

```
sum(v[ ]: integer array, num: integer): integer{
    temp_sum: integer ;
    temp_sum := 0;
    for i = 0 to num - 1 do
        temp_sum := v[i] + temp_sum;
    return temp_sum;
}
```

Note the use of pseudocode

1/2/2007

CSE 373 Wi 07 - Introduction

21

Programming via Recursion

- Write a *recursive* function to find the sum of the first **num** integers stored in array **v**.

```
sum (v[ ]: integer array, num: integer): integer {
    if num = 0 then } base case
        return 0
    else
        return v[num-1] + sum(v,num-1); } recursive case
}
```

1/2/2007

CSE 373 Wi 07 - Introduction

22

Pseudocode

- In the lectures algorithms will (often) be presented in "pseudocode".
 - › Common in the computer science literature
 - › Pseudocode is usually easily translated to real code.
 - › Independent of particular programming language
 - › Informal but precise: there is no "official" language definition for pseudocode

1/2/2007

CSE 373 Wi 07 - Introduction

23

Algorithms vs Programs

- Proving correctness of an algorithm is very important
 - › a well designed algorithm is guaranteed to work correctly and its performance can be estimated
- Proving correctness of a program (an implementation) is fraught with weird bugs
 - › Abstract Data Types are a way to bridge the gap between mathematical algorithms and programs
