

Deletion – The Two Child Case

Delete(5)

What can we replace 5 with?

04/11/2008

37

Deletion – The Two Child Case

Idea: Replace the deleted node with a value guaranteed to be between the two child subtrees!

Options:

- *succ* from right subtree: $\text{findMin}(t.\text{right})$
- *pred* from left subtree : $\text{findMax}(t.\text{left})$

Now delete the original node containing *succ* or *pred*

- Leaf or one child case – easy!

04/11/2008

38

Finally...

7 replaces 5

Original node containing
7 gets deleted

04/11/2008

39

Balanced BST

Observation

- BST: the shallower the better!
- For a BST with n nodes
 - Average height is $O(\log n)$
 - Worst case height is $O(n)$
- Simple cases such as $\text{insert}(1, 2, 3, \dots, n)$ lead to the worst case scenario

Solution: Require a **Balance Condition** that

1. ensures depth is $O(\log n)$ – strong enough!
2. is easy to maintain – not too strong!

04/11/2008

40

Potential Balance Conditions

1. Left and right subtrees of the root have equal number of nodes

2. Left and right subtrees of the root have equal *height*

04/11/2008

41

Potential Balance Conditions

3. Left and right subtrees of *every node* have equal number of nodes

4. Left and right subtrees of *every node* have equal *height*

04/11/2008

42

The AVL Balance Condition

Left and right subtrees of *every node* have equal heights differing by at most 1

Define: $\text{balance}(x) = \text{height}(x.\text{left}) - \text{height}(x.\text{right})$

AVL property: $-1 \leq \text{balance}(x) \leq 1$, for every node x

- Ensures small depth
 - Will prove this by showing that an AVL tree of height h must have a lot of (i.e. $O(2^h)$) nodes
- Easy to maintain
 - Using single and double rotations

04/11/2008

43

The AVL Tree Data Structure

Structural properties

- Binary tree property
- Balance property: balance of every node is between -1 and 1

Result:

Worst case depth is $O(\log n)$

Ordering property

- Same as for BST

04/11/2008

44

04/11/2008

45

Proving Shallowness Bound

Let $S(h)$ be the min # of nodes in an AVL tree of height h

AVL tree of height $h=4$ with the min # of nodes

Claim: $S(h) = S(h-1) + S(h-2) + 1$

Solution of recurrence: $S(h) = O(2^h)$ (like Fibonacci numbers)

04/11/2008

46

Testing the Balance Property

We need to be able to:

NULLs have height -1

04/11/2008

47

An AVL Tree

04/11/2008

48

AVL trees: find, insert

- **AVL find:**
 - same as BST find.
- **AVL insert:**
 - same as BST insert, *except* may need to “fix” the AVL tree after inserting new value.

04/11/2008

49

AVL tree insert

Let x be the node where an imbalance occurs.

Four cases to consider. The insertion is in the

1. left subtree of the left child of x .
2. right subtree of the left child of x .
3. left subtree of the right child of x .
4. right subtree of the right child of x .

Idea: Cases 1 & 4 are solved by a **single rotation**.
Cases 2 & 3 are solved by a **double rotation**.

04/11/2008

50

Bad Case #1

Insert(6)
Insert(3)
Insert(1)

04/11/2008

51

Fix: Apply Single Rotation

AVL Property violated at this node (x)

Single Rotation:
1. Rotate between x and child

04/11/2008

52

Single rotation in general

$$X < b < Y < a < Z$$

04/11/2008

53

Height of tree before? Height of tree after? Effect on Ancestors?

Single rotation example

04/11/2008

54

Bad Case #2

Insert(1)
Insert(6)
Insert(3)

04/11/2008

55

Fix: Apply Double Rotation

AVL Property violated at this node (x)

Double Rotation

1. Rotate between x's child and grandchild
2. Rotate between x and x's new child

04/11/2008

56

Double rotation in general

04/11/2008

57

Height of tree before? Height of tree after? Effect on Ancestors?

Double rotation, step 1

04/11/2008

58

Double rotation, step 2

04/11/2008

59

Imbalance at node X

Single Rotation

1. Rotate between x and child

Double Rotation

1. Rotate between x's child and grandchild
2. Rotate between x and x's new child

04/11/2008

60

Insert into an AVL tree: a b e c d

Student Activity

Circle your final answer

61

Single and Double Rotations:

Inserting what integer values would cause the tree to need a:

1. single rotation?

2. double rotation?

3. no rotation?

Student Activity

62

Insertion into AVL tree

1. Find spot for new key
2. Hang new node there with this key
3. Search back up the path for imbalance
4. If there is an imbalance:

case #1: Perform single rotation and exit

case #2: Perform double rotation and exit
Both rotations keep the subtree height unchanged.
Hence only one rotation is sufficient!

04/11/2008

63

Easy Insert

Insert(3)

Unbalanced?

04/11/2008

64

Hard Insert (Bad Case #1)

Insert(33)

Unbalanced?

How to fix?

04/11/2008

65

Single Rotation

04/11/2008

66

Hard Insert (Bad Case #2)

Insert(18)

Unbalanced?

How to fix?

04/11/2008

67

Single Rotation (oops!)

04/11/2008

68

Double Rotation (Step #1)

04/11/2008

69

Double Rotation (Step #2)
