

Introduction

CSE 373
Data Structures & Algorithms
Ruth Anderson
Winter 2012

Today's Outline

- Introductions
- Administrative Info
- What is this course about?
- Review: Stacks and Queues

1/04/2012

CSE 373 12wi - Introduction

2

Staff

- **Instructor**
 - › Ruth Anderson, ([rea at cs.washington.edu](mailto:rea@cs.washington.edu))
- **TA's**
 - › Jijiang "Johnny" Yan, ([jjyan at cs.washington.edu](mailto:jjyan@cs.washington.edu))
 - › Laura Dong, ([ledong at cs.washington.edu](mailto:ledong@cs.washington.edu))
 - › Anton Osobov, ([aosobov at cs.washington.edu](mailto:aosobov@cs.washington.edu))
 - › Ian Talarico, ([talarico at cs.washington.edu](mailto:talarico@cs.washington.edu))

1/04/2012

CSE 373 12wi - Introduction

3

Me (Ruth Anderson)

- **Grad Student at UW** in Programming Languages, Compilers, Parallel Computing
- **Taught Computer Science** at the University of Virginia for 5 years
- **Grad Student at UW**: PhD in Educational Technology, Pen Computing
- **Current Research**: Computing and the Developing World
- **Recently Taught**: majors and non-majors data structures, architecture, compilers, programming languages, cse143, Designing Technology for Resource-Constrained Environments

1/04/2012

CSE 373 12wi - Introduction

Web Page

- All info is on the web page for CSE 373
 - › <http://www.cs.washington.edu/373>
 - › also known as
 - <http://www.cs.washington.edu/education/courses/373/12wi>
- Look there for schedules, contact information, assignments, links to discussion boards and mailing lists, etc.

1/04/2012

CSE 373 12wi - Introduction

5

Office Hours

- Ruth Anderson– 360 CSE (Allen Center)
 - › **Monday** 3:30-4:30pm,
 - › **Thursday** 10:45-11:45am
 - › or by appointment

1/04/2012

CSE 373 12wi - Introduction

6

CSE 373 E-mail List

- If you are registered for the course, you will be automatically subscribed.
- The E-mail list is used for posting announcements by instructor and TAs.
- You are responsible for anything sent here

1/04/2012

CSE 373 12wi - Introduction

7

CSE 373 Discussion Board

- The course will have a Catalyst Go-Post message board
- Use for:
 - › General discussion of class contents
 - › Hints and ideas about assignments (but **not** detailed code or solutions)
 - › Other topics related to the course.

1/04/2012

CSE 373 12wi - Introduction

8

Computer Lab for homework and Help sessions

- College of Arts & Sciences Instructional Computing Lab
 - › <http://depts.washington.edu/aslab/>
- We'll be using Java for the programming assignments.
- Eclipse is recommended programming environment.

1/04/2012

CSE 373 12wi - Introduction

9

Textbook

- *Data Structures and Algorithm Analysis in Java*, by Mark Allen Weiss, 3rd edition, Addison-Wesley, 2012.
- We will also try to support the 2nd edition (2007).

1/04/2012

CSE 373 12wi - Introduction

10

Grading Estimated Breakdown:

- Assignments 50%
 - › Weights may differ to account for relative difficulty of assignments
 - › Assignments will be a mix of shorter written exercises and longer programming projects
- Midterms 30% (Two, 15% each)
- Final Exam 20%
 - › 2:30-4:20pm Tuesday, March 13, 2012.

1/04/2012

CSE 373 12wi - Introduction

11

Deadlines & Late Policy

- Assignments generally due Thursday evenings via the web
 - › Exact times and dates will be given for each assignment
- Late policy: 20% off per 24hrs late
 - › Note: ALL parts of the assignment must be received by that time (may require you to make an electronic version of written assignments).
(Talk to the instructor if something truly outside your control causes problems here)

1/04/2012

CSE 373 12wi - Introduction

12

Academic (Mis-)Conduct

- You are expected to do your own work
 - › Exceptions (group work), if any, will be clearly announced
- Sharing solutions, doing work for or accepting work from others will be penalized
- Referring to solutions from this or other courses from previous quarters is cheating.
- Integrity is a fundamental principle in the academic world (and elsewhere) – we and your classmates trust you; don't abuse that trust

1/04/2012

CSE 373 12wi - Introduction

13

Policy on collaboration

- “Gilligan's Island” rule:
 - › You may discuss problems with your classmates to your heart's content.
 - › After you have solved a problem, *discard all written notes* about the solution.
 - › Go watch TV for a ½ hour (or more). Preferably *Gilligan's Island*.
 - › *Then* write your solution.

1/04/2012

CSE 373 12wi - Introduction

14

Homework for Today!!

- 0) **Review Java & Explore Eclipse**
- 1) **Assignment #1:** (posted soon)
- 2) **Preliminary Survey:** fill out by evening of Thursday Jan 5th
- 3) **Information Sheet:** bring to lecture on Friday Jan 6th
- 4) **Reading** in Weiss (see next slide)

1/04/2012

CSE 373 12wi - Introduction

15

Reading

- Reading in *Data Structures and Algorithm Analysis in Java*, by Weiss
- For this week:
 - › Chapter 1 – (review) Mathematics and Java
 - › Chapter 3 – (Assign #1) Lists, Stacks, & Queues
 - › Chapter 2 – (Topic next week) Algorithm Analysis

1/04/2012

CSE 373 12wi - Introduction

16

Bring to Class on Friday:

- Name
- Email address
- Year (1,2,3,4)
- Major
- Hometown
- Interesting Fact or what I did over break.

1/04/2012

CSE 373 12wi - Introduction

17

Today's Outline

- Introductions
- Administrative Info
- **What is this course about?**
- Review: Stacks and Queues

1/04/2012

CSE 373 12wi - Introduction

18

Course Topics

- Introduction to Algorithm Analysis
- Lists, Stacks, Queues
- Trees, Hashing, Dictionaries
- Heaps, Priority Queues
- Sorting
- Disjoint Sets
- Graph Algorithms

1/04/2012

CSE 373 12wi - Introduction

19

Background

- Prerequisite is CSE 143
- Topics you should have a basic understanding of:
 - › Variables, conditionals, loops, methods (functions), fundamentals of defining classes and inheritance, arrays, single linked lists, simple binary trees, recursion, some sorting and searching algorithms, basic algorithm analysis (e.g., $O(n)$ vs $O(n^2)$ and similar things)
- We can fill in gaps as needed, but if any topics are new, plan on some extra studying

1/04/2012

CSE 373 12wi - Introduction

20

Okay, so what is 373 about?

- Introduction to many of the basic data structures and algorithms used in computer software:
 - › Understand the data structures and the **trade-offs** they make
 - › Rigorously **analyze** the algorithms that use them (math!)
 - › Learn how to **pick** “the right data structure for the job”
 - › More thorough and rigorous take on topics introduced in CSE 143 (plus more new topics)
- Practice design and analysis of data structures/algorithms
- Practice implementing and using these data structures by writing programs

1/04/2012

CSE 373 12wi - Introduction

21

Goals

- You will understand:
 - › what the tools are for storing and processing common data types
 - › which tools are appropriate for which need
- So that you will be able to:
 - › **make good design choices** as a developer, project manager, or system customer
 - › **justify** and **communicate** your design decisions

1/04/2012

CSE 373 12wi - Introduction

22

Data structures?

“**Clever**” ways to organize information in order to enable **efficient** computation over that information.

1/04/2012

CSE 373 12wi - Introduction

23

Data structures!

A data structure supports certain *operations*, each with a:

- › **Meaning**: what does the operation do/return?
- › **Performance**: how efficient is the operation?

Examples:

- › **List** with operations **insert** and **delete**
- › **Stack** with operations **push** and **pop**

1/04/2012

CSE 373 12wi - Introduction

24

Picking the best data structure for the job

Things we care about:

- Does this data structure support the operations I need?
 - › e.g. find an item quickly, insert in any location, print in sorted order, delete?
- Does it support them in an **efficient** manner?
 - › Time (Speed)
 - › Space (Memory)
- How easy will it be to implement, debug, and test it?

1/04/2012

CSE 373 12wi - Introduction

25

Implementation Trade-offs

A data structure tries to provide many useful, efficient operations.

But there are unavoidable trade-offs:

- › Time vs. Space – use more memory to make some operations faster
- › Making one operation more efficient may make another operation less efficient
- › Providing more operations (making the data structure more general) may force some operations to be less efficient.

This is why there are many data structures!

In this class we will discuss their trade-offs and techniques.

1/04/2012

CSE 373 12wi - Introduction

26

Terminology

- **Abstract Data Type (ADT)**: Mathematical description of an object and a set of operations on the object
- **Algorithm**: A high level, language-independent description of a step-by-step process
- **Data structure**: A specific *organization of data* and family of algorithms for implementing an ADT
- **Implementation** of a data structure: A specific implementation in a specific language

1/04/2012

CSE 373 12wi - Introduction

27

Terminology examples

- A stack is an *abstract data type* supporting push, pop and isEmpty operations
- A stack *data structure* could use an array, a linked list, or anything that can hold data
- One stack *implementation* is found in the java.util.Stack class

1/04/2012

CSE 373 12wi - Introduction

28

ADTs and Interfaces in Java

- Abstract Data Type (ADT):
 - › Describes *what* you can do to a collection, not *how* it does it
- Can think of Java **interfaces** as describing an ADT
 - › e.g., List, Map, Set **interfaces**
 - › Separate from class **implementations**
- Java **interfaces** and classes that implement them:
 - › ArrayList and LinkedList implement List **interface**
 - › HashMap and TreeMap implement Map **interface**
 - › HashSet and TreeSet implement Set **interface**
 - Aside: There is also a Queue interface. They messed up on Stack; there's no Stack interface, just a class.

1/04/2012

CSE 373 12wi - Introduction

29

Java's List Interface

Operations described in Java's List interface (subset):

add(el , index)	inserts the element at the specified position in the list
remove(index)	removes the element at the specified position
get(index)	returns the element at the specified position
set(index , el)	replaces the element at the specified position with the specified element
contains(el)	returns true if the list contains the element
size()	returns the number of elements in the list

ArrayList and LinkedList are Java classes that implement the List interface
