

CSE 390Z: Mathematics for Computation Workshop

QuickCheck: Predicate Logic and English Proofs (due Sunday, October 23)

Please submit a response to the following questions on Gradescope. We do not grade on accuracy, so please submit your best attempt. You may either typeset your responses or hand-write them. Note that hand-written solutions must be legible to be graded.

We have created [this template](#) if you choose to typeset with Latex. [This guide](#) has specific information about scanning and uploading pdf files to Gradescope.

0. How Odd!

Let $\text{Odd}(x)$ be defined as $\exists y (x = 2y + 1)$. Let the domain of discourse be the set of all integers.

- (a) Translate the following statement into English.

$$\forall x \forall y ((\text{Odd}(x) \wedge \text{Odd}(y)) \rightarrow \text{Odd}(xy))$$

- (b) Prove the statement from part (a) using an *English proof*.

1. Video Solution

Watch [this video](#) on the solution **after** making an initial attempt. Then, answer the following questions.

- (a) What is one thing you took away from the video solution?
- (b) What topic from the quick check or lecture would you most like to review in workshop?
- (c) (Optional) Are there any changes you'd like to see for 390z Office Hours? E.g. more on Zoom, more on certain days, etc.
