

What does this program print?

```
class One {
    int tag;
    int it;
    void setTag()    { tag = 1; }
    int getTag()    { return tag; }
    void setIt(int it) { this.it = it; }
    int getIt()     { return it; }
}

class Two extends One {
    int it;
    void setTag() {
        tag = 2; it = 3;
    }
    int getThat() { return it; }
    void resetIt() { super.setIt(42); }
}

public static void main(String[] args) {
    Two two = new Two();
    One one = two;

    one.setTag();
    System.out.println(one.getTag());

    one.setIt(17);
    two.setTag();
    System.out.println(two.getIt());
    System.out.println(two.getThat());
    two.resetIt();
    System.out.println(two.getIt());
    System.out.println(two.getThat());
}
```
