

## Project:

=====

## User Experience (10)

Does it work (at all)?

List of features *implemented* vs *planned but not implemented* (no penalty for non-implementation)

=====

## Binary Release (15)

Release notes for binary release

Complete installation package in appropriate download

User documentation (appropriate for Grandma or course staff) (preliminary okay, final version in final release)

Binary install experience

=====

## Source Release (15)

Release notes for source release

1-step build to (exe, compiled)

Packaging all the way to downloadable .zip or msi or ...

Design documentation (handoff material for next development team) (preliminary okay, final version in final release)

Source build experience

=====

## Process (15)

An artifact is concrete evidence that you are doing the requested activity. For example, link to actual tool reports (bugzilla, cvs analysis, etc), screenshot, copy and paste actual report, etc.

If you can't provide such an artifact for a particular item, please provide a discussion of why not.

**Provide artifacts showing:**

Source control

One-step build

Daily build

Automated testing

Bug database

Schedule
