

CSE403 • Software engineering • sp12

Week 9-10+				
Monday	Tuesday	Wednesday	Thursday	Friday
• Midterm II review	• Groups	• Midterm II • [Notkin gone]	• No section	• Progress report due
Memorial Day Holiday	• Groups	• Final release due • Project Pres. I	• Project Pres. II	• Project Pres. III
• Individual retrospective due	• Team retrospective due			

Topics

- Everything since midterm I – material covered on midterm I may be used as context, but it will not be a primary focus
- Includes
 - Testing
 - Joel test
 - Interviewing
 - Reviews
 - AOP
 - Refactoring
- Plus the assigned reading for the midterm:
Managing Technical Debt

Style

- WebQ in class – same rules as for midterm II
- Open electronics, including searching, looking at course notes, etc.
- Communication with anybody else via voice, IM, email, cell phone, text, smoke signals, or any other method during the test is not allowed – except with the course staff, of course, for questions, etc.
- We will wander around watching for disallowed activities
- ***Instead of providing laptops for those who need them, we will have printed copies of the midterm – you can choose to do it this way instead, as well***
 - ***If you really want to borrow one, let the TAs know***
- There are power outlets; if the wireless goes out, we'll figure out what to do depending on the specific situation
- Aiming at 50 minutes of content

Structure

Subject to minor changes

- True/false questions
- Multiple choice questions
- Three long(er) answer questions
 - A question asking you to relate technical debt to some specific concepts and issues we've covered
 - A question related to white box oriented coverage approaches
 - TBD
