

Class Scheduler

Lots of tools are needed to compare classes

The screenshot shows a web browser window with three tabs: 'MyUW Main Page', 'Registration', and 'COMPUTER S'. The address bar displays the URL <https://sdb.admin.washington.edu/TimeSchd/UWNet>. The page header features the University of Washington logo and the text 'UNIVERSITY of WASHINGTON', with a breadcrumb trail 'UW Home > Student Guide'. The main heading is 'Schedule Finder'. Below this, a paragraph states: 'Use the Schedule Finder to find an open non-conflicting schedule of the courses you want to take.' A bulleted list follows:

- Select a quarter and enter the Curriculum Abbreviation and Course Number for each course you want to take.
- To "lock in" a specific course section, also enter its Section ID (e.g., A, AA, BC). A 'locked in' section is marked with a lock icon.

Potential Issues

- Data needs to be stored on a server somewhere
- We need to be able to get data to put into the server easily
- Team members may need knowledge of databases or web development
