

# Vision

- App for recommending activities
- designed with college students in mind
- Solves the “what should we do?” problem
- More holistic than alternatives such as urbanspoon
- Compelling because it solves a common problem
- Many college students are new to their school’s area

# Software Architecture

- Frontend handles signup, queries, displaying results, etc
- Backend server handles data storage, computations, etc
- Various APIs for additional data, and authentication

# Challenges

- Feature creep
- Many possible features
- Barebones approach with extendability in mind
- Focus on necessary parts to prevent sloppy features.
- Scalability : Number of users, amount of information, number of features to support
