

Queueing Theory

Nicholas Shahan (nshahan@cs)

Evan Whitfield (evanw2@cs)

A web application for creating and managing wait queues.

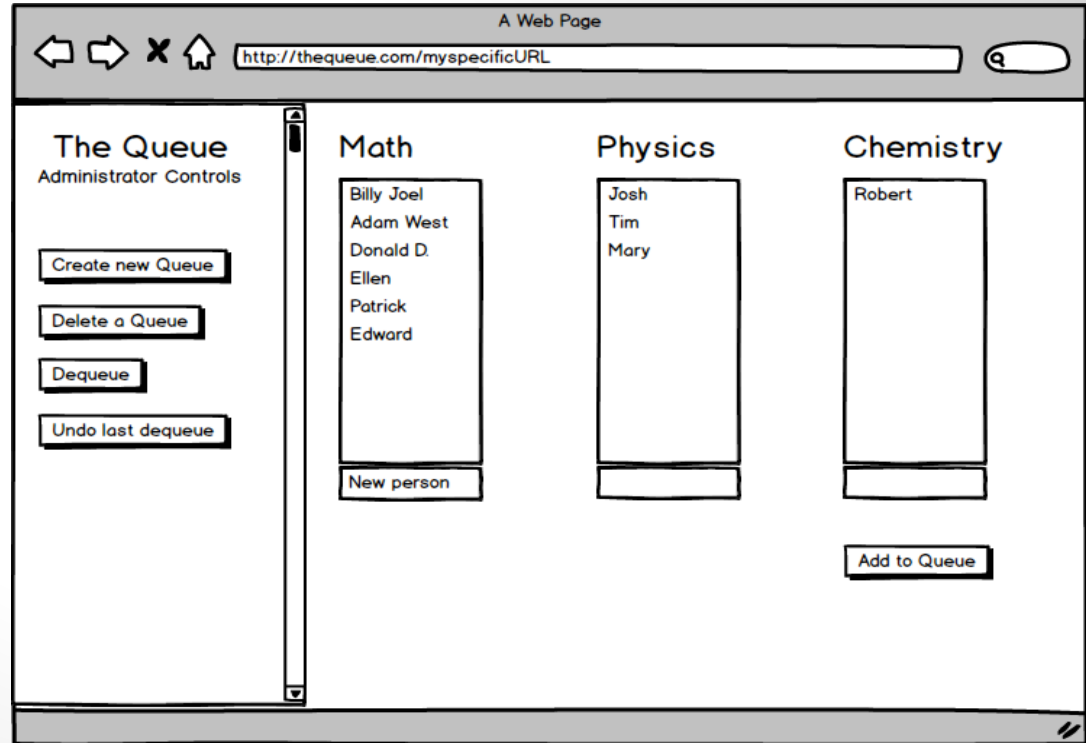

- Users create and customize their own Queue
 - Share the URL with others
 - Separate administrator page for management
- Other users can sign up for “a place in line”

Simple & Responsive User Interface

Creating a new queue should be as easy as specifying a few parameters.

Placing yourself in an existing Queue is even easier.

Technology

User Interface

HTML, CSS, and Javascript

Server Infrastructure

AJAX, Django (Python) or PHP

AngularJS or Backbone.js

Data Storage

SQL Database or MongoDB
