

# The Problem...

People love to go on adventures, but lack the means of discovering adventures that may be available to them.

# The Solution...

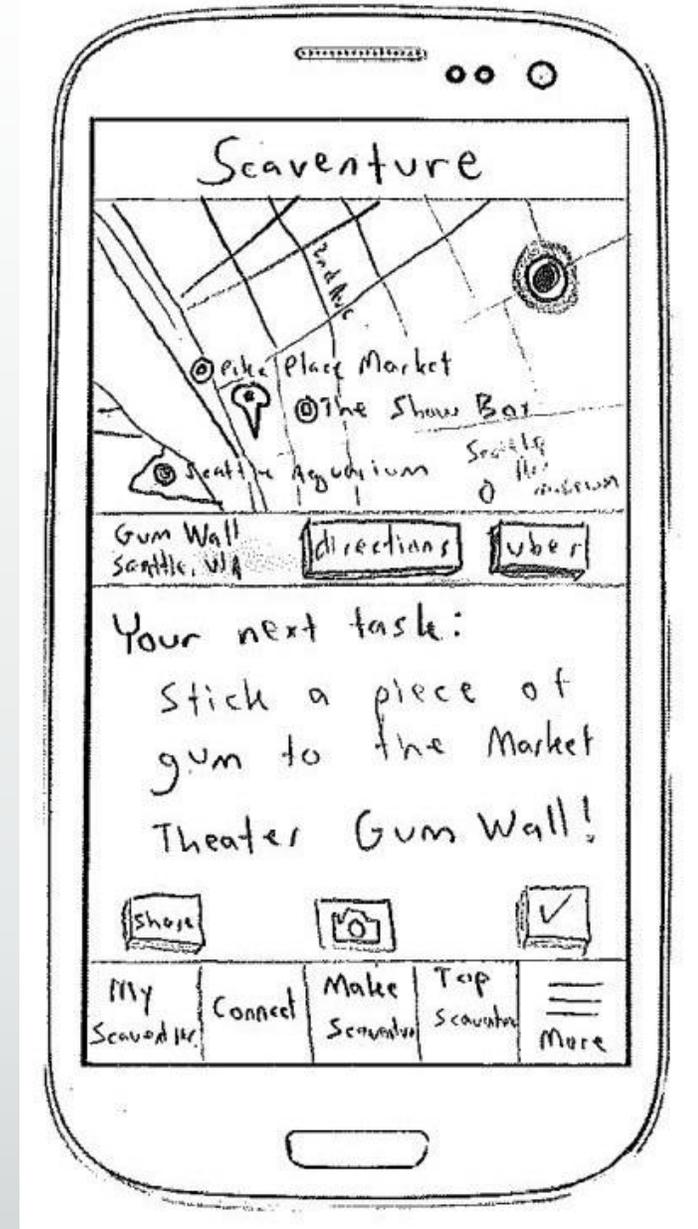

**Scaventure!** A mobile application that allows people to create, engage in, and publish scavenger hunts, as well as connect with like-minded people to go on scavenger hunts with them.

# Vision

- Utilize crowdsourcing to help users find the best scavenger hunts in their area.
- Connect users with other users who want to go on particular scavenger hunts.
- Allow users to easily find directions and transportation if needed.

# Architecture

- Build using the Android SDK and associated tools.
- Utilize the Google Maps API for location based services and directions, and the Uber API for transportation services.
- Utilize a cloud-based server/database backend using MySQL.

# Scaventure

Adventures Through Scavenger Hunts
