What's on your mind?

☐ Facebook ☐ Twitter ☐ Google+

# Vision

We are looking to make a **social media aggregator mobile application** for **consumer use**.

Post to multiple social media sites simultaneously

Receive posts from friends and people you've followed from multiple sites

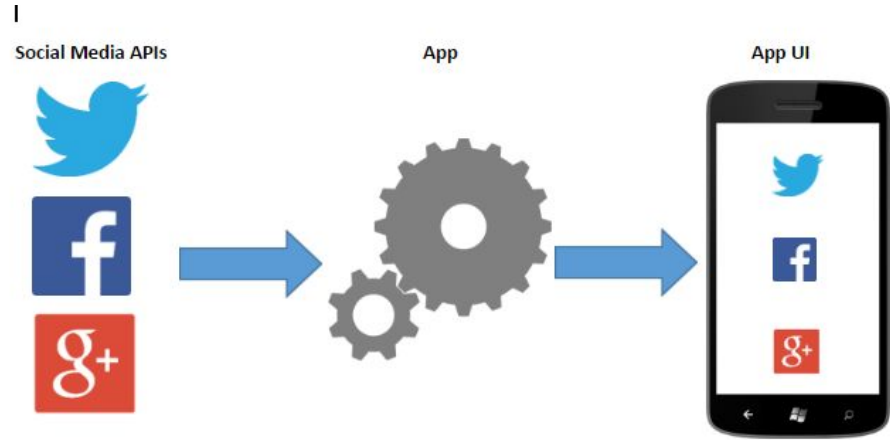

These applications currently operate primarily for **business use** on purchase

We aim to build a consumer friendly app

# Architecture

Android Studios IDE - Java

Facebook, Twitter, Google+ APIs

MVC Style Architecture - Twitter, Google+, Facebook act as model, app acts as controller fetching data via their APIs, UI presents data to the user, acting as the view
