
FitSpeak

A social fitness network

By: Quan Tran (qtran88) and Ian Parr (ianparr)

Vision

- Create a social connection between users and their gyms
- Make personalized workout schedules and share it with other users
- Enables users to set goals and keep track of their fitness stats
- Combination of both a fitness app and a social network
- Share experiences and ask for help choosing your own gyms to share to.
- Easily accessible and targeted for new gym-goers

Architecture

- ❖ Implemented as a mobile app
- ❖ Implements a map service like Google maps api.
- ❖ Backend web server that stores both user data and information about the gyms.

Risks

- ❖ Time taken to learn the map api and linking it with the user interface
- ❖ Designing a sleek and efficient interface that will attract users from competition
