

Word on the Street

Michael Diamant & Kevin Liang

The Problem

We've become disconnected from our communities and spend more time interacting with screens than exploring our own neighborhoods and cities.

The Solution

Word on the Street: a location based discovery mobile web application. Users can set their discovery range and then simply walk around to discover “shoutouts” which are locations that other users have identified as places of interest. These can be a beautiful scenic lookout, best ice cream shop, or even safety warnings.

Details

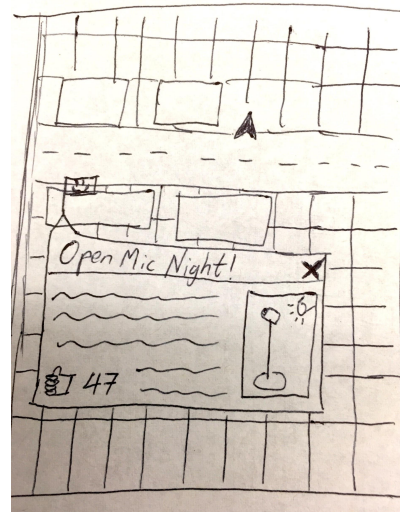

- upvote shoutouts
- shoutouts decay
- categories

Tech

- angular.js frontend
- node.js backend
- postgresSQL database
- Google Maps API
