# PhotoGram

•••

A Programming Language For Photographers

User Group

- Photographers
- Photography Lovers

Motivation

- Problem: Too much repetitive work for photographers that can be programmed
- Solution: Design A programming Language with Block Based GUI for Batch Image Processing.

One example of a block-based GUI is "Helena"(http://helena-lang.org/)

Risks and Challenges

- Making it trivial enough for non-programmer users
- Image Processing algorithms is to the development but is not a topic that most developers are familiar with
- Make it smart to be able to develop each photo differently

- Challenges depends on the scale of this project.
- May need focusing on integration with existing algorithms.
