Section 5 Worksheet

Use the Mondial dataset in hw5 to solve the following problems.

1. Return the **set** of all mountains.

2. Return each mountain one by one. Compare it to Problem 1.

3. Return name and type for each mountain, in descending order of the height. If the mountain does not specify a type, make the type "normal".

4. Find mountains located in more than 1 country. Your query should return mountain name and the count of how many countries each mountain is in.

5. For each country, return the country name and a list of all the mountain names in that country.
