## Decision Tree

## Titanic Survival Classification Tree

## Decision Tree

Like Mr. Bean's car, a decision tree is

- Super Simple - They are often easier to interpret than even linear models.
- Very Efficient - The computation cost is minimal.
- Weak - It has low predictive power on its own. It's in a class of models called the "weak learners".

## Random Forest

1. Randomly sample the rows (w/replacement) and columns (w/o replacement) at each node and build a deep tree.

| Survived | Pclass | Sex | Age | SibSp | Parch | Fare | Embarked |
| ---: | ---: | :--- | ---: | ---: | ---: | ---: | :--- |
| 0 | 3 | male | 22 | 1 | 0 | 7.25 | S |
| 1 | 1 | female | 38 | 1 | 0 | 71.2833 | C |
| 1 | 3 | female | 26 | 0 | 0 | 7.925 | S |
| 1 | 1 | female | 35 | 1 | 0 | 53.1 | S |
| 0 | 3 | male | 35 | 0 | 0 | 8.05 | S |
| 0 | 3 | male |  | 0 | 0 | 8.4583 | Q |
| 0 | 1 | male | 54 | 0 | 0 | 51.8625 | S |
| 1 | 3 | male | 2 | 3 | 1 | 21.075 | S |
| 1 | female | 27 | 0 | 2 | 11.1333 | S |  |
| 1 | 2 | female | 14 | 1 | 0 | 30.0708 | C |

## Random Forest

1. Randomly sample the rows (w/replacement) and columns (w/o replacement) at each node and build a deep tree.
2. Repeat many times ( $1,000+$ )

| Survived | Pclass | Sex | Age | SibSp | Parch | Fare | Embarked |
| ---: | ---: | :--- | ---: | ---: | ---: | ---: | :--- |
| 0 | 3 | male | 22 | 1 | 0 | 7.25 | S |
| 1 | 1 | female | 38 | 1 | 0 | 71.2833 | C |
| 1 | 3 | female | 26 | 0 | 0 | 7.925 | S |
| 1 | 1 | female | 35 | 1 | 0 | 53.1 | S |
| 0 | 3 | male | 35 | 0 | 0 | 8.05 | S |
| 0 | 3 | male |  | 0 | 0 | 8.4583 | Q |
| 0 | 1 | male | 54 | 0 | 0 | 51.8625 | S |
| 1 | 3 | male | 2 | 3 | 1 | 21.075 | S |
| 1 | female | 27 | 0 | 2 | 11.1333 | S |  |
| 1 | 2 | female | 14 | 1 | 0 | 30.0708 | C |

## Random Forest

1. Randomly sample the rows (w/replacement) and columns (w/o replacement) at each node and build a deep tree.
2. Repeat many times ( $1,000+$ )
3. Ensemble trees by majority vote (ie. if 300 out of 1,000 trees predicts a given individual dies then probability of death is $30 \%$ ).

| Survived | Pclass | Sex | Age | SibSp | Parch | Fare | Embarked |
| ---: | ---: | :--- | ---: | ---: | ---: | ---: | :--- |
| 0 | 3 | male | 22 | 1 | 0 | 7.25 | S |
| 1 | 1 | female | 38 | 1 | 0 | 71.2833 | C |
| 1 | 3 | female | 26 | 0 | 0 | 7.925 | S |
| 1 | 1 | female | 35 | 1 | 0 | 53.1 | S |
| 0 | 3 | male | 35 | 0 | 0 | 8.05 | S |
| 0 | 3 | male |  | 0 | 0 | 8.4583 | Q |
| 0 | 1 | male | 54 | 0 | 0 | 51.8625 | S |
| 1 | 3 | male | 2 | 3 | 1 | 21.075 | S |
| 1 | 3 | female | 27 | 0 | 2 | 11.1333 | S |
| 1 | 2 | female | 14 | 1 | 0 | 30.0708 | C |

## Random Forest - Tree 1

| Survived | Pclass | Sex | Age | SibSp | Parch | Fare | Embarked |
| ---: | ---: | :--- | :--- | ---: | ---: | ---: | :--- |
| 0 | 3 | male | 22 | 1 | 0 | 7.25 | S |
| 1 | 1 | female | 38 | 1 | 0 | 71.2833 | C |
| 1 | 3 | female | 26 | 0 | 0 | 7.925 | S |
| 1 | 1 | female | 35 | 1 | 0 | 53.1 | S |
| 0 | 3 | male | 35 | 0 | 0 | 8.05 | S |
| 0 | 3 | male |  | 0 | 0 | 8.4583 | Q |
| 0 | 1 | male | 54 | 0 | 0 | 51.8625 | S |

| 1 | 2 | female | 27 | 0 | 2 | 11.1333 | S |
| 14 | female | 14 | 1 | 0 | 30.0708 | C |  |

## Random Forest - Tree 2

## $\Omega$

| Survived | Pclass | Sex | Age | SibSp | Parch | Fare | Embarked |
| ---: | ---: | :--- | :--- | ---: | ---: | ---: | :--- |
| 0 | 3 | male | 22 | 1 | 0 | 7.25 | S |
| 1 | 1 | female | 38 | 1 | 0 | 71.2833 | C |
| 1 | 3 | female | 26 | 0 | 0 | 7.925 | S |
| 1 | 1 | female | 35 | 1 | 0 | 53.1 | S |
| 0 | 3 | male | 35 | 0 | 0 | 8.05 | S |
| 0 | 3 | male |  | 0 | 0 | 8.4583 | Q |
| 0 | 1 | male | 54 | 0 | 0 | 51.8625 | S |
| 1 | 3 | male | 2 | 3 | 1 | 21.075 | S |
| 1 | 2 | female | 27 | 0 | 2 | 11.1333 | S |
| 14 | female | 14 | 1 | 0 | 30.0708 | C |  |

## Random Forest - Several Trees

| Survived | Pclass | Sex | Age | SibSp | Parch | Fare | Embarked |
| ---: | ---: | :--- | :--- | ---: | ---: | ---: | :--- |
| 0 | 3 | male | 22 | 1 | 0 | 7.25 | S |
| 1 | 1 | female | 38 | 1 | 0 | 71.2833 | C |
| 1 | 3 | female | 26 | 0 | 0 | 7.925 | S |
| 1 | 1 | female | 35 | 1 | 0 | 53.1 | S |
| 0 | 3 | male | 35 | 0 | 0 | 8.05 | S |
| 0 | 3 | male |  | 0 | 0 | 8.4583 | Q |
| 0 | 1 | male | 54 | 0 | 0 | 51.8625 | S |
| 1 | 3 | male | 2 | 3 | 1 | 21.075 | S |
| 1 | 2 | female | 27 | 0 | 2 | 11.1333 | S |
| 14 |  | 14 | 0 | 30.0708 | C |  |  |

## Random Forest

Like a Honda CR-V, Random Forest is

- Versatile - It can do classification, regression, missing value imputation, clustering, feature importance, and works well on most data sets right out of the box.
- Efficient - Trees can be grown in parallel.
- Low Maintenance - Parameter tuning
 is often not needed. You can tune number of columns to subsample, but it usually doesn't change much.

$\longleftarrow \quad$ D3

$\longleftarrow \quad$ D4

$$
\hat{y}=\operatorname{sign}\left(\sum_{t=1}^{T} \hat{\mathbf{w}}_{t} f_{t}(\mathbf{x})\right)
$$

## Gradient Boosting

Given this process, how quickly do you think this leads to overfitting?

## Gradient Boosting

Given this process, how quickly do you think this leads to overfitting?

The surprising answer is not very fast.

## Gradient Boosting

Like the original hummer, Gradient Boosting is

- Powerful - On most real world data sets, it is hard to beat in predictive power. It can handle missing values natively. It is fairly robust to unbalanced data.
- High Maintenance - There are many parameters to tune. Extra precautions must be taken to prevent overfitting.
- Expensive - Boosting is inherently sequential and computationally expensive. However, it is a lot faster now with new
 tools like XGBoost (UW) and Lightgbm (Microsoft).
